INDIA COMPANY, EAST. The first commercial intercourse of the English with the East Indies was a private adventure of three ships fitted out in 1591. Only one of them reached India; and, after a voyage of three years, the commander, captain Lancaster, was brought home in another ship, the sailors having seized his own; but his information gave rise to a mercantile voyage, and the establishment of a company, whose first charter, in Dec. 1600, was renewed in 1609, 1657, 1661, 1693, and 1744. Its stock in 1600 consisted of 72,000*l.*, when it fitted out four ships. Meeting with success, it continued to trade, and India stock sold at 500*l.* for a share of 100*l.* in 1683. East India, Vols. I. and II. 1898.

A new company (the "English") was chartered 5 Sept. 1698, and the old (the "London") suspended from trading for three years; the two were united 1702

As remedial measures two acts passed, (one authorised a loan of 1,000,000*l.* to the company; the other celebrated as the *India bill*) effected most important changes in the constitution of the company and its relations to India. A governor-general was appointed to reside in Bengal, to which the other presidencies were then made subordinate; a supreme court of judicature was instituted at Calcutta: the salary of the governor was fixed at 25,000*l.* per year; that of the council at 10,000*l.* each; and of the chief judge at 8000*l.*; the affairs of the company were controlled; all the departments were re-organised, and all the territorial correspondence was henceforth to be laid before the British ministry . . . June, 1773
Mr. Pitt's bill appointing the Board of Control (*which see*), passed . . . . . 18 May, 1784

Trade with India thrown open 1813
Trade to China opened; Charter renewed till 1854 . 1833
The government of India was continued in the hands of the company till parliament should otherwise provide 1853
In consequence of the mutiny of 1857, and the disappearance of the company's army, the government of India was transferred to the crown, the Board of Control was abolished, and a Council of State for India instituted by the act 21 & 22 Vict. c. 106, which received the royal assent, 2 Aug.* 1858

* Lord Palmerston brought in a bill for the purpose on 12 Feb., which was accepted by the house on 18 Feb. He resigned on the following day, and the bill dropped. A similar bill was introduced by Mr. Disraeli on 12 March; but many of its details being objected to, it was withdrawn. INDICTION, a Roman term originally applied to a tribute of corn, paid every fifteen years, and to the time at which it was paid. The first examples in the Theodosian code are of the reign of Constantius II., who died 361.—In memory of the great victory obtained by Constantine over Maxentius, 8 Cal. Oct. 312, the council of Nice ordained that the accounts of years should be no longer kept by the Olympiads, but by the Indiction, which has its epocha 1 Jan. 313. It was first used by the Latin church in 342.

INDIGO, the dye obtained from the woad plant, *isatis tinctoria*, was used by the Egyptians, and other ancient nations; and the processes are described by Pliny. After the passage of the Cape of Good Hope, in 1497, it was gradually superseded by the eastern indigo, got from the *indigofera*. The mention of indigo occurs in English statutes in 1581. Its cultivation was begun in Carolina in 1747. The quantity imported into Great Britain in 1840 was 5,831,269 lbs.; in 1845, 10,127,488 lbs.; in 1850, 70,482 cwt.; in 1859, 63,237 cwt.; in 1861, 83,109 cwt.; in 1866, 74,256 cwt.; in 1869, 86,721 cwt.; in 1870, 79,255 cwt.; in 1871, 106,307 cwt.; in 1874, 85,707 cwt.; in 1876, 88,722 cwt.; in 1877, 60,640 cwt.; in 1879, 80,146 cwt.; in 1880, 58,283 cwt.; in 1881, 81,088 cwt.; in 1882, 95,272 cwt.; in 1883, 100,243 cwt.; in 1884, 104,423 cwt.; in 1885, 94,314 cwt.; in 1887, 76,700 cwt.; in 1888, 78,128 cwt.; in 1889, 90,238 cwt.; in 1890, 81,854 cwt.; 1893, 66,981 cwt.

After long-continued experiments, especially by prof. A. Baeyer, the dye has been prepared artificially from its chemical elements in coal tar 1869-80

Professor H. E. Roscoe, at the Royal Institution, proved that the properties of the artificial and natural indigo were identical . . 27 May, 1881

INDIUM, a metal discovered in the arsenical pyrites of Freiberg by F. Reich and T. Richter in 1863. Its name is due to its giving an indigo blue ray in its spectrum.

INDIVIDUALISM, the principal maintained by Herbert Spenser and others in opposition to too much state control and socialism. "The coming individualism," by A. Egmont Hake and O. E. Wesslau, published Jan. 1896.

INDO-CHINA, a name given to central Asia. The countries under French government or protection are Annam, Cochin China, Cambodia, and Tonquin. Burmah is subject to Great Britain, and Siam is independent, 1893. M. de Lannessan appointed gov.-general (actively aggressive), superseded by M. Armand Rousseau, 29 Dec. 1894; he died, Dec. 1896; succeeded by M. Doumer, Dec. 1896.

INDORE, a province of British India; the principal native rulers have been the Mahratta chiefs, named Holkar, rivals of the Scindiahs at Gwalior. Rao Holkar received a grant of territory from the British in 1733. After severe conflicts the Mahratta chiefs were finally quelled in 1818. The town of Indore, founded in 1767, was destroyed by Scindiah after a battle on 14 Oct. 1801. The maharajah Shivaja Rao Holkar died 17 June, 1886. Succeeded by his son, Tuckaji Rao Holkar, who was present at the queen's jubilee in London in 1887. Indore was visited by the viceroy, the marquis of Lansdowne, 24 Nov. 1891. Population, 1881, 1,055,217.

INDUCTION of electric currents, discovered by Faraday, and announced in his "Experimental Researches," published in 1831-2. Ruhmkorff's magneto-electric induction coil was constructed in 1850. See under *Electricity*.

INDUCTIVE PHILOSOPHY, based on the results of observations and experiments, really *common sense*, is especially expounded by Bacon in the second book of his "*Novum Organon*," published 1620. Wm. Harvey (1578-1657) endeavoured "to search out the secrets of nature by the way of experiment." See *Blood*.

INDULGENCES in the early church were the moderation of ecclesiastical punishment. The papal system for the absolute pardon of sin, commenced by Leo. III. about 800, were granted in the 11th century by Gregory VII., and by Urban II., and by others, in the 12th century as rewards to the crusaders. Clement V. was the first pope who made public sale of indulgences, 1313. In 1517, Leo X. published general indulgences throughout Europe, and the resistance to them led to the Reformation.

INFALLIBILITY OF THE POPE, in regard to faith and morals, was decreed by the Vatican Council, and promulgated, 18 July, 1870. The doctrine was much opposed in Germany, and led to the constitution of the church named "Old Catholics," *which see*. Mr. Gladstone's pamphlets, "The Vatican Decrees in their bearing on Civil Allegiance," published Nov. 1874, and "Vaticanism," in Feb. 1875.

INFANTICIDE, especially female, was very prevalent in barbarous countries. Lord Macartney stated that 20,000 infants were killed annually; it is now gradually decreasing in India. On 12 Nov. 1851, Mr. Raikes induced the Chohan chiefs to agree to resolutions against it, and a great meeting in the Punjab was held for the same purpose, 14 Nov. 1853. Much suspicion was caused in London in 1867 through the deaths of children farmed out to improper persons. The agitation revived, June, 1870. Margaret Waters was convicted of the murder of John Cowen, an illegitimate infant, by poison and neglect, 23 Sept. 1870. She had adopted about 40 children, receiving a few pounds as premium; in four years, many had died. John and Catherine Barns, of Tranmere, near Birkenhead, convicted of manslaughter (see *Trials*), 29 Oct. 1879. The Infant Life Protection act passed 25 July, 1872; amended, 1897. Female infanticide prohibited in China about June, 1873. Amelia E. Dyer, a baby farmer, convicted of the murder of infant children, the bodies having been thrown into the Thames at Reading, 22 May; executed, 10 June, 1896.

INFANTRY, foot soldiers; their organisation much improved during the wars of Charles V. and Francis I., in the 16th century. The British army comprised 99 regiments of regular infantry in 1858, when the Canadians raised a regiment which is termed the 100th. The number, now 109, includes the nine regiments formerly in the pay of the East India company, and several colonial corps. Marshal Soult (or marshal Bugeaud) said, "The British infantry is the finest in the world: happily there is not much of it." In 1891, 69,274.

The powers of wives and widows in respect to the care and training of their children, were somewhat enlarged in 1839, more so in 1873, and very much more by a bill brought in by Mr. James Bryce, read a second time 26 March, 1884.

Guardianship of Infants Act passed, 1886.

INFANT SCHOOLS began in New Lanark, Scotland, in 1815; in London in 1818.

INFECTIOUS DISEASES. By an act passed 30 Aug. 1889, notification of any person suffering from infectious disease is required to be given by the nearest relative or any person in

charge, and also by the medical attendant to the medical officer of health of the district. An act to prevent the spread of infectious disease was passed 4 Aug. 1890.

INFIRMARIES. Ancient Rome had no houses for the cure of the sick; diseased persons were carried to the temple of Æsculapius for cure. Institutions for the accommodation of travellers, the indigent, and sick were founded by the emperor Julian about 362; and infirmaries or hospitals were frequently built to cathedrals and monasteries. The emperor Louis II. caused infirmaries situated on mountains to be visited, 855. In Jerusalem the knights and brothers attended on the sick. There were hospitals for the sick at Constantinople, in the 11th century. The oldest mention of physicians and surgeons established in infirmaries occurs in 1437. *Beckmann;* see *Hospitals.* Parish workhouse infirmaries established, 1867.

INFLUENZA, a name given in Italy about 1741 to an epidemic febrile catarrh with variations, probably known to the ancients.

It prevailed in Europe in 1510, and has since frequently appeared, generally commencing in Russia and thence spreading over the continent. It appeared in Britain in 1762 and frequently since, especially in 1830–1, 1833, 1836–7, and 1847. It appeared at Paris in 1866–7, and at Berlin, 1874–5. In Oct. 1889, it was severe in St. Petersburg, and thence spread over Europe, reaching Great Britain, Canada and the United States N.A., Jan. 1890, causing indirectly the deaths of several eminent persons. In the spring, the disease was severe in India and Australia. In 1891 the disease was severe in the west of the United States N.A., and in London and other parts of England, and also on the continent. The disease reappeared in Jan. 1892, in much the same localities. In London the general mortality was much increased, all classes being attacked. The death of the duke of Clarence and Avondale, 14 Jan. 1892, was attributed to pneumonia following influenza. Reports of the epidemic of 1889–90, by Dr. Parsons, issued by government, 1891–3. Moderate outbreak in London, Feb. 1893, chiefly among the upper and middle classes, the marquis of Salisbury, duke of Abercorn, marquis of Londonderry and others, March; many cases autumn and winter, 1893–94; epidemic in London; prevalent in United Kingdom and on the continent, many deaths, Feb.-April, 1895. Epidemic in St. Petersburg and S. Russia, March, 1895. Epidemic in London and home counties, Jan. Feb. 1898.

INFORMERS, upon penal statutes, compounding with defendants without leave of the court, were punishable with fine and pillory, by 18 Eliz. c. 5 (1576). Their share of a penalty was regulated by 2 & 3 Vict. c. 71 (1839).

INGESTRE HALL, Staffordshire, destroyed by fire 12 Oct. 1882. It was built in 1676. Many valuable portraits, &c. were destroyed.

INGOUR, a river rising in the Caucasus and falling into the Black Sea. Omar Pasha, marching to the relief of Kars, crossed this river on 6 Nov. 1855, with 10,000 men, and attacked the Russians, 12,000 strong, who, after a struggle, retreated with the loss of 400 men. The Turks had 68 killed and 242 wounded. Kars, however, was not saved.

INK. The ancient black inks were composed of soot and ivory black, and Vitruvius and Pliny mention lamp-black; but they had ink of various colours, as red, gold, silver, and purple. Red ink was made of vermilion and gum. INDIAN INK was brought from China, and must have been in use by the people of the east from the earliest ages. INVISIBLE, or SYMPATHETIC INKS, were known at early periods. Ovid (A.D. 2) teaches young women to write with new milk. Receipts for preparing invisible ink were given by Peter Borel, in 1653, and by Le Mort, in 1669. *Beckmann.*

INKERMANN (Crimea). The Russian army (about 40,000) having received reinforcements, and being encouraged by the presence of the granddukes Michael and Nicholas, attacked the British (8000) near the old fort of Inkermann, before daybreak, 5 Nov. 1854. They were kept at bay for six hours till the arrival of 6000 French. The Russians were then repulsed, leaving 9000 killed and wounded. The loss of the allies was 462 killed, 1952 wounded, and 191 missing. Sir George Cathcart, and generals Strangways, Goldie, and Torrens, were among the slain. On 15 Nov. 1855, an explosion of about 100,000 lbs. of gunpowder occurred near Inkermann, and caused great loss of life.

INOCULATION, see *Small Pox.* Lady Mary Wortley Montagu introduced inoculation from small pox to England from Turkey. In 1718 she had her son inoculated at Adrianople with success. She was allowed to have it first tried in England on seven condemned criminals, 1721; and in 1722 two

of the royal family were inoculated. The practice was preached against by many of the bishops and clergy until 1760. Dr. Mead practised inoculation very successfully up to 1754, and Dr. Dimsdale of London, inoculated Catherine II., empress of Russia, in 1768. Of 5964 who were inoculated in 1797-99, only three died. An inoculation hospital was established in 1746. *Vaccine* inoculation was introduced by Dr. Jenner, 21 Jan. 1799; he had discovered its virtue in 1796, and had been making experiments during the intermediate three years. Inoculation was forbidden by law in 1840. See *Vaccination*, *Sheep*, *Hydrophobia*, and *Diphtheria*.

INQUESTS, see *Coroner*.

INQUISITION or HOLY OFFICE. Previous to Constantine (306), heresy and spiritual offences were punished by excommunication only; but shortly after his death capital punishments were added, and inquisitors were appointed by Theodosius, 382. Priscillian was put to death in 384 by the emperor Maximus. Justinian decreed the doctrine of the four holy synods as to the holy scriptures and their canons to be observed as laws, 529; hence the penal code against heretics. About 800 the power of the western bishops was enlarged, and courts were established for trying and punishing spiritual offenders, even with death; the punishment being termed in Spain *auto-da-fé*, "an act of faith." In the 12th century many heresies arose, and during the crusades against the Albigenses, Gregory IX., in 1233, established by rules the inquisitorial missions sent out by Innocent III., 1210-15, and committed them to the Dominicans. Pietro da Verona (styled Peter Martyr), the first inquisitor who burnt heretics, assassinated by an accused gonfalonier, 6 April, 1252, was canonized.

INSOLVENCY. The first insolvent act was passed in 1649, but it was of limited operation; a number of acts of more extensive operation were passed at various periods, and particularly in the reign of George III. The benefit of the act known as the Great Insolvent Act, was taken in England by 50,733 insolvents from the time of its passing in 1814, to March, 1827, a period of thirteen years. Since then the acts relating to insolvency have been several times amended. Persons not traders, or being traders whose debts are less than 300*l*., might petition the court of bankruptcy, and propose compositions, and have *pro tem.* protection from all process against their persons and property, by 6 Vict. c. 116 (1842). In 1861, by a new bankruptcy act, the business of the insolvent debtors' court was transferred to the court of bankruptcy; and a number of imprisoned debtors were released in Nov. 1861. INTENDMENT OF CRIMES. In cases of treason, wounding, burglary, &c., intention proved was made as punishable as crime completed, by 7 Geo. II. 1734. The rigour was modified by sir Robert Peel's revision of the statutes, 4-10 Geo. IV. 1823-29.

INTERDICT or ECCLESIASTICAL CENSURE, seldom decreed in Europe till the time of Gregory VII. 1073, but often afterwards. When a prince was excommunicated, all his subjects retaining their allegiance were excommunicated also, and the clergy were forbidden to perform any part of divine service, or any clerical duties, save the baptism of infants, and taking the confessions of dying penitents. In 1170, pope Alexander put all England under an interdict; and when king John was excommunicated in 1208, the kingdom lay under a papal interdict for six years. England was put under an interdict, on Henry VIII. shaking off the pope's supremacy, 1535; and pope Sixtus V. published a crusade against queen Elizabeth of England in 1588; see *Excommunication*.

INTEREST, see *Usury*. The word interest was first used in an act of parliament of the 21st James I. 1623, wherein it was made to signify a lawful increase by way of compensation for the use of money lent. The rate fixed by the act was 8*l.* for the use of 100*l.* for a year, in place of usury at 10*l.* before taken. The Commonwealth lowered the rate to 6*l.* in 1651; confirmed in 1660; and by an act of the 13th of queen Anne, 1713, it was reduced to 5*l.* The restraint being found prejudicial to commerce was somewhat relaxed in 1839, and was totally removed by 17 & 18 Vict. c. 90 (1854).

Henry V. gave up the right, by treaty, Feb. 1111; but other sovereigns resolutely refused to concede it.

INVINCIBLE ARMADA or SPANISH ARMADA, see *Armada*.

INVINCIBLES, IRISH, see *Irish Invincibles*, *Fenians* and *Ireland*, 1882-3.

INVOCATION OF THE VIRGIN AND SAINTS to intercede with God. This practice of the Romish church has been traced to the time of Gregory the Great, 593. The Eastern church began (in the 5th century) by calling upon the dead, and demanding their suffrage as present in the divine offices.

IODINE (from the Greek *iōdēs*, violet-like), was discovered by M. De Courtois, a manufacturer of saltpetre at Paris in 1812, and investigated by M. Clement, 1813. On the application of heat it rises in the form of a dense violet-coloured vapour, easily evaporates, and melts at 220 degrees: it changes vegetable blues to yellow, and a seven-thousandth part converts water to a deep yellow colour, and starch into a purple.

IONA, ICOLMKILL, or HII, one of the Hebrides. About 565 St. Columba founded a monastery here, which flourished till the 8th and 9th centuries, when it was frequently ravaged by the Norsemen. Other religious bodies afterwards were formed here, and the isle was long esteemed sacred.

IONIA (Asia Minor). About 1040 B.C. the Ionès, a Pelasgic race, emigrated from Greece, and settled here and on the adjoining islands. They built Ephesus, Smyrna, and other noble cities. They were conquered by the great Cyrus about 548 B.C.; revolted 504, but were again subdued. After the victories of Cimon, Ionia became independent and remained so till 387, when it was once more subjected to Persia. It formed part of the dominions of Alexander and his successors; was annexed to the Roman empire, 133, and conquered by the Turks.—Ionia was renowned for poets, historians, and philosophers. The "Antiquities of Ionia" were published by Chandler, Revett, and Pars, 1769-1840, and the Dilettanti Society, 1840-1881.

IONIAN ISLANDS (on W. coast of Greece). Corfu, the capital, Cephalonia, Zante, Ithaca, Santa Maura, Cerigo, and Paxo. They were colonised by the Ionès, and partook of the fortunes of the Greek people; were subject to Naples in the 13th century, and in the 14th to Venice.

It is stated that only 6 persons were killed by the shocks. IONIC ORDER OF ARCHITECTURE, an improvement on the Doric, was invented by the Ionians about 1350 B.C. *Vitruvius.* Its distinguishing characters are the slenderness and flutings of its columns, and the volutes of rams' horns that adorn the capital.

IONIC SECT OF PHILOSOPHERS, founded by Thales of Miletus about 600 B.C., distinguished for its abstruse speculations under his successors and pupils, Anaximander, Anaximenes, Anaxagoras, and Archelaus, the master of Socrates. They held that the world is a living being, and that water is the origin of all things.

IRONCLADS, see *Circular*, *Navy*, and *United States*, 1862; *Germany*, 1878.

IRON CROSS, an order of knighthood established by Frederick William III. of Prussia, 10 March, 1813, to honour patriotic bravery in the war against France; was revived by William I. in the Franco-Prussian war, and awarded by him to his son for his victory at Wissembourg, 4 Aug. 1870. About 40,000 persons were decorated in 1870-71.

IRON CROWN (of Italy), of gold and precious stones, set in a thin ring of iron, said to have been forged from a nail of Christ's cross, was made by order of Theudelinde for her husband, Agilulf, king of the Longobards, 591. She presented it (to be kept) to the church at Monza. Charlemagne was crowned with this crown, and after him all the emperors who were kings of Lombardy; Napoleon I. at Milan, on 26 May, 1805, put it on his head, saying, "*Dieu me l'a donnée; gare à qui y touchera.*" (God has given it to me; woe to him who touches it.) The crown was removed from Monza to Mantua by the Austrians, on 23 April, 1859. After the peace of Vienna in 1866, the crown was given up to general Menabrea on 11 Oct., and presented to king Victor Emmanuel, at Turin, on 4 Nov. The order of the "Iron Crown of Italy," instituted by Napoleon 26 May, 1805, was abolished in 1814, but revived by the emperor of Austria 12 Feb. 1816; see *Gotha*. The order of the Crown of Italy was instituted by king Victor Emmanuel 20 Feb. 1868.

He was of noble mien, and was treated with profound respect; but his keepers had orders to despatch him if he uncovered. M. de St. Mars himself always placed the dishes on his table, and stood in his presence.

IRREDENTISTS, see *Italia Irredenta*.

IRRIGATION, practised in the east and in Egypt from the most remote ages. It was strenuously advocated for India by sir A. Cotton and others at the Social Science Congress at Manchester, Oct. 1866. In 1865 acts were passed for utilising London sewage in the irrigation of grass land, and the results are said to be generally favourable. The subject was much discussed, Aug. 1873. A method of producing artificial rain from ponds by means of steam-power, patented by Isaac Brown, of Edinburgh, was tried by Mr. Coleman, at Stoke Park and reported successful; see *Sewage*, and *Intermittent Filtration*, *Madras* (1895), *Egypt*, *Nile*.

IRUN (a frontier village of Spain). On 16 May 1837, the British auxiliary legion under general Evans, marched from St. Sebastian to attack Irun (held by the Carlists), which after a desperate resistance was carried by assault, 17 May.

IRVINGITES, followers of Edward Irving,* now called the "Holy Catholic Apostolic Church." They use a liturgy (framed in 1842, and enlarged 1853), and have church officers named apostles, angels, prophets, &c. In 1852 lighted candles were placed on the magnificent altar, and burning of incense during prayers was prescribed. The Gothic church in Gordon-square was solemnly opened 1 Jan. 1854. It is said that all who join the church offer it a tenth of their income. They had 30 chapels in England in 1851.

* The following conjectures have been made as to his identity:—An Armenian patriarch forcibly carried from Constantinople (who died ten years before the mask); the duc de Vermandois, son of Louis XIV., reported to have perished in the camp before Dixmude; the duc de Beaufort, whose head is reported to have been taken off before Candia; James, duke of Monmouth, executed on Tower-hill; a son of Anne of Austria, queen of Louis XIII., either by cardinal Mazarine, or by the duke of Buckingham; the twin brother of Louis XIV. (a conjecture received by Voltaire and others); Foucquet, an eminent statesman in the time of Louis XIV.; and a count Matthioli, secretary of state to Charles III., duke of Mantua. M. Delort and the right hon. Agar Ellis (afterwards lord Dover) endeavoured to prove Matthioli to have been the person. The mask, it seems, was not made of iron; but of black velvet, strengthened with whalebone, and fastened behind the head with a padlock.

* Edward Irving was born 15 Aug. 1792, and was engaged as assistant to Dr. Chalmers, at Glasgow, in 1819. In 1823 he attracted immense crowds of distinguished persons to his sermons at the Scotch church, Hatton-garden. A new church was built for him in Regent-square in 1827. Soon after, he propounded new doctrines on the human nature of Christ: and the "Utterances of Unknown Tongues," which began in his congregation with a Miss Hall and Mr. Taplin, 16 Oct. 1831, were countenanced by him, as of divine inspiration. He was expelled from the Scotch church, 15 March, 1833. His church, "reconstituted with the threefold cord of a sevenfold ministry," was removed to Newman-street. He died 8 Dec. 1834.

It was again captured by the Russians 26 Sept. 1809, and retained till the treaty of Paris in 1856, when it was ceded to Moldavia.

ISTAMBOUL, see *Constantinople*.

ISTER, see *Danube*.

ISTHMIAN GAMES received their name from the isthmus of Corinth, where they were observed: their institution is mythically attributed to Sisyphus of Corinth, 1326 B.C., and to Theseus in honour of Neptune about 1234. The games, which were solemnly kept every third year, were discontinued at the destruction of Corinth by Lucius Mummius, 146 B.C. The games were revived by Julius Cæsar, 60 B.C.; and by the emperor Julian, A.D. 362, and ceased in 396, when Corinth was sacked by the Goths.

ISTRIA was finally subdued by the Romans, 177 B.C. After various changes it came under the rule of Venice in 1378, and was annexed 1420. It was obtained by Austria 1796; by France 1806; by Austria 1814. Population in 1890, 317,610.

The following terms are often used with reference to certain periods in the history of Italian literature and art.

1. *Trecento* (three hundred), from the birth of Dante (1265) to the death of Boccaccio (1375), which two, with Petrarca, are styled "the triumvirate of the Trecento."
2. *Quattrocento* (four hundred), from 1375 to the revival of Italian literature by Lorenzo de' Medici in the 15th century. During this period Latin was revived, to the prejudice of Italian.
3. *Cinquecento* (five hundred), from about 1480 to 1590. A sensuous style of art, founded on the heathen mythology, began to prevail.
4. *Seicento* (six hundred), from 1590 to 1700. The bad taste which prevailed during this period is ascribed to the influence of the Spaniards and the Jesuits throughout Italy. *Seicentisti* is a term of reproach.

The *Trecento* and *Cinquecento* were the most flourishing periods.

ITALIAN REPUBLIC was the name given to the remodelled Cisalpine republic. Napoleon Bonaparte, president, Jan. 1802.

ITALY, a name mythically derived either from Italus, an early king, or *italus*, a bull calf. The invading Pelasgians from Greece, and the Aborigines (Umbrians, Oscans, and Etruscans), combined, form the Latin race, still possessing the southern part of Europe. The history of Italy is soon absorbed into that of Rome, founded 753 B.C. In the middle ages it was desolated by intestine wars and the interference of the German emperors; since then, Spain, France, and Germany struggled for the possession of the country, which has been divided among them several times. Spain, which predominated in Italy during the 16th and 17th centuries, yielded to the house of Austria at the beginning of the 18th. The victories of Bonaparte in 1797-8 changed the government of Italy; but the Austrian rule was re-established at the peace in 1814. In 1848 the Milanese and Venetians revolted and joined Piedmont, but were subdued by Radetzky; see *below*. The hostile feeling between Austria and Piedmont gradually increased till war broke out in April, 1859. The Austrians were defeated, and the kingdom of Italy, comprising Piedmont, Sardinia, Lombardy, Tuscany, Modena, Parma, the Romagna, Naples, and Sicily was re-established, 17 March, 1861, by the Italian parliament (consisting of 443 deputies from 59 provinces). On 29 Oct., 1861, the internal government was reorganized; the 59 provinces were placed under prefects, subject to four directors-general. War with Austria was declared 18 June, 1866; and on 3 Oct., peace was signed at Vienna, and Venetia was ceded to Italy; see *below* for the events. The settlement of the kingdom of Italy was consummated by the occupation of Rome as the capital, 1870. Estimated population of the kingdom, 1862, 25,003,635 (Rome was added in 1870). 1878, 28,209,620; Jan. 1882, 28,452,639; 1893, 30,535,848. 1890-91, revenue, 78,129,383*l.*; 1893, 69,368,397*l.*; expenditure, 81,850,050*l.*; 1893, 71,699,867*l.*; imports, 71,905,383*l.*; exports, 51,171,079*l.* For other details see *Rome* and the various Italian cities throughout the volume.

A sentimental revival of Jacobitism appeared in England in 1891, the "White Rose League" having been formed. The marquis de Ruvigny and other members of the "Legitimist Jacobite League" were stopped in their attempt to place a large floral wreath on the tomb of Mary, queen of Scots, in Westminster Abbey, 8 Feb. 1892.

JACQUARD LOOM, for figured fabrics, invented by Joseph Marie Jacquard, of Lyons, and patented 23 Dec. 1801.

JACQUERIE, a term applied to bands of revolted peasants (headed by one Caillot, called Jacques Bonhomme), who ravaged France during the captivity of king John in 1358, and were quelled with much bloodshed. Similar insurrections occurred in Germany. One was termed the *Bundschuh*, from the large shoe especially worn by peasants, in 1502; and another termed the Bund (or league) of the Poor Conrad, 1514 and 1524, which also cost about 100,000 lives, and led to the insurrection of the anabaptists.

JAFFA, a seaport of Syria, celebrated in scripture as Joppa, whence Jonah embarked (about 862 B.C.), and where Peter raised Tabitha from the dead (A.D. 38); in mythology the place whence Perseus delivered Andromeda. Jaffa was taken by the caliph Omar, in 636; by the Crusaders, 1099; by Saladin, 1193; by Louis IX., 1252; and by Bonaparte, 7 March, 1799; the French were driven out by the British in June, the same year. Here, according to sir Robert Wilson, were massacred 3800 prisoners by Bonaparte; but this is doubted. Jaffa suffered by an earthquake in Jan. 1837, when it is said that 13,000 persons were killed.

JAGELLONS, a dynasty which at times reigned over Lithuania, Poland, Hungary, and Bohemia, beginning with Jagellon, duke of Lithuania (husband of Hedwig, daughter of Louis of Hungary, 1384), who became king of Poland as Ladislas III. or V. in 1399, and ending with Sigismund II., who died in 1572.

JANISSARIES (Turkish *iéni tchéri*, new soldiers), an order of infantry in the Turkish army; originally, young prisoners trained to arms; were first organised by Orcan, about 1330, and remodelled by his son Amurath I. 1360; their numbers being increased by following sultans. In later days they degenerated from their strict discipline, and several times deposed and killed the sultans. During an insurrection, 14-15 June, 1826, when nearly 3000 of them were killed, the Ottoman army was re-organised by Mahmud II. and a firman was issued on 17 June, abolishing the Janissaries.

JANSENISTS, persons who embraced the doctrines of Cornelius Jansen, bishop of Ypres, who died in 1638. The publication of his "*Augustinus*," 1640, in which he maintained the doctrine of free grace, kindled a fierce controversy, and was condemned by a bull of pope Urban VIII. in 1642. Through the Jesuits Jansenism was condemned by Innocent X. in 1653, and by Clement XI., in 1713, by the bull Unigenitus. This bull the French church rejected. Jansenism still exists at Utrecht and Haarlem; see *Port Royalists*. Loos, abp. of Utrecht, died, June, 1873.

JANUARY derives its name from Janus, an early Roman divinity. January was added to the Roman calendar by Numa, 713 B.C. He placed it about the winter solstice, and made it the first month, because Janus was supposed to preside over the beginning of all business. In 1751 the legal year in England was ordered to begin on 1 Jan. instead of 25 March. Mild Januaries in England, 1804, mean temperature, 43·2; 1834, 44·4; 1846, 43·7; 1875, 43·4; 1884, 43·9; 1890, 43·5 (on 18 days above 50).

JANUS, Temple of, at Rome, was erected by C. Duilius in 3rd century B.C., kept open in time of war, and closed in time of peace. It was shut at the close of the first Punic war, 235 B.C.; and under Augustus, 29, 25, and 5 B.C.

JARNAC (W. France). On 13 March, 1569, the duke of Anjou, afterwards Henry III. of France, here defeated the Huguenots under Louis, prince of Condé, who was killed in cold blood by Montesquieu. The victor (seventeen years of age), on account of his success here and at Moncontour, was chosen king of Poland.

A Jarnac Stroke; a term of opprobrium, is derived from the Seigneur de Jarnac, who, in a duel with La Chataigneraye, for a great insult, disabled his antagonist by an unexpected wound in the ham 1547

JASMINE or JESSAMINE (*Jasminum officinale*), native of Persia, &c., was brought hither from Circassia, before 1548. The Catalonian jasmine came from the East Indies, in 1629, and the yellow Indian jasmine in 1656.

JASSY, the capital of Moldavia, frequently occupied by the Russians; taken by them in 1739, 1769, and 1828. A treaty between them and the Turks was signed here, 9 Jan. 1792. Population, 1885, 90,000.

JAVA, a large island in the Eastern Archipelago, is said to have been reached by the Portuguese in 1511, and by the Dutch in 1595. The latter, who now possess it, built Batavia, the capital, about 1619; see *Batavia*. The atrocious massacre of 20,000 of the unarmed natives by the Dutch, sparing neither women nor children, to possess their effects, took place in 1740. The island capitulated to the British, 18 Sept. 1811. The sultan was dethroned by the English, and the hereditary prince raised to the throne, in June, 1813. Java was restored to Holland by treaty in 1814, and given up in 1816. The English promoted free labour instead of forced; but the Dutch reverted to the old system, and in 1830 abolished free labour, introducing the "culture system," by which the government controls the cultivation of the land and buys the produce at its own price. In Aug. 1860, the Swiss soldiers here, aided by the natives, mutinied, but were soon reduced, and many suffered death. The diminished prosperity of Java led to warm discussions in the Dutch chamber in 1866.

The valuable "History of Java," by sir T. Stamford Raffles (successful governor 1811–16; his life by Mr. Demetrius Boulger, published 1898), was published 1817.
Java has a great many volcanoes, and has frequently been devastated by eruptions and earthquakes; those of 5 Jan. 1699, 31 Oct. 1876, and 10 June, 1877, were very destructive.
Java and neighbouring isles desolated by a series of violent eruptions from about two-thirds of its 46 volcanoes, beginning with Krakatoa, casting up immense quantities of lava, mud, ashes, and fragments of rocks, darkening the air for about 50 square miles. Mountains were split up, some disappeared, and many new craters were formed. Rumbling noises heard 25 Aug., violent eruptions of Krakatoa 26 Aug. There was much submarine disturbance, and an immense "tidal wave" destroyed Anjer and other places, 27 Aug. The lighthouses in the straits of Sunda were swallowed up, and new volcanic peaks appeared, rendering navigation highly dangerous. Loss of life estimated at 35,000, 25-28 Aug. Great atmospheric, oceanic, and electrical disturbances for thousands of square miles. See under *Sun*, 1883.
A committee of the Royal Society issued a report on the eruption Oct. 1888.
Serious volcanic outbreaks; great destruction; about 500 persons perish, early May, 1885.
Insurrection of the natives at Anjer; some Europeans and natives killed; the revolt checked by the police and settled, 16 July, 1888.
By a great eruption of the volcano of Galoenggoen in 1822 114 villages were destroyed, and over 4,000 lives lost; several villages destroyed by another eruption, reported, 20 Oct. 1894.

The Prussians were defeated, losing nearly 20,000 killed and wounded, and nearly as many prisoners, and 200 field pieces; the French lost 14,000 men. Napoleon advanced to Berlin, and issued the Berlin decree (*which see*).

JENKINS' EAR. In 1731, an English merchant-vessel was boarded by a Spanish guardship, and the captain, Robert Jenkins, cruelly used, his wounded ear being torn off. He obtained no redress by appeal to his government. He appeared before parliament in 1738, when the convention of the Pardo was severely discussed, and war ensued. Jenkins' story was verified by Admiralty Records in 1889.

JERSEY. The chief island of the Channel archipelago (which includes Guernsey, Sark, Alderney, &c.), formerly held by the Romans in the 3rd and 4th centuries after Christ—Jersey being termed Cæsarea. The isles were captured by Rollo, and thus became an appanage of the duchy of Normandy, and were united to the crown of England by his descendant, William the Conqueror. The inhabitants of the Channel Islands preferred to remain subjects of king John, at the period of the conquest of Normandy by Philip Augustus, and while retaining the laws, customs, and (until lately) the language of their continental ancestors, have always remained firm in their allegiance to England. Almost every war with France has been characterised by an attack on Jersey, the most formidable of which, under the baron de Rullecour, was defeated by the English garrison and Jersey militia, commanded by major Pierson, 6 Jan. 1781. Mr. J. Bertrand Payne, in his "Armorial of Jersey," and his "Gossiping Guide," has exhaustively treated the general and family history of the island. Jersey became a place of refuge for MM. Rouher, Baroche, Drouyn de Lhuys, and other distinguished French imperialists, Sept. 1870. Some of the Trappists and other monks expelled from France, settle in Jersey, 1880-1. JESTER is described as "a witty and jocose person, kept by princes to inform them of their faults, and of those of others, under the disguise of a waggish story." Several of our kings, particularly the Tudors, kept jesters. Rahere, the founder of St. Bartholomew's priory, West Smithfield, London, 1133, is said to have been a court jester and minstrel. There was a jester at court in the reigns of James I. and Charles I., but we hear of no licensed jester afterwards.

JESUITS. The society or company of Jesus, was founded by Ignatius Loyola, a page to Ferdinand V. of Spain, subsequently an officer in his army, and afterwards canonised. Having been wounded in both legs at the siege of Pampeluna, in 1521, he devoted himself to theology, and renounced the military for the ecclesiastical profession. He dedicated his life to the Blessed Virgin as her knight; made a pilgrimage to the Holy Land, and on his return laid the foundation of his society at Paris, 16 Aug. 1534. He presented his institutes, in 1539, to pope Paul III., who made many objections; but Ignatius adding to the vows of chastity, poverty, and obedience, a fourth of implicit submission to the holy see, the institution was confirmed by a bull, 27 Sept. 1540. The number of members was not to exceed sixty, but that restriction was taken off by another bull, 14 March, 1543; and popes Julius III., Pius V., and Gregory XIII. granted many privileges. Loyola died 31 July, 1556. Francis Xavier, and other missionaries, the first brethren, carried the order to the extremities of the habitable globe, but it met with great opposition in Europe, particularly in Paris; see *Paraguay* and *Jansenists*. The order still exists in many European states contrary to the laws.

JESUIT'S BARK, called by the Spaniards fever-wood, from the cinchona or chinchona tree, discovered, it is said, by a Jesuit, about 1535 (and used by the order). Its virtues were not generally known till 1633, or 1638, when it cured of fever the wife of the viceroy (Chinchona) at Peru, hence termed *pulvis comitissæ*. It was sold at one period for its weight in silver, and was introduced into France in 1649; and is said to have cured Louis XIV. of fever when he was dauphin. It came into general use in 1680, and sir Hans Sloane introduced it here about 1700. The cinchona plant, largely planted in the Neilgherry hills, India, in 1861, is said to be thriving greatly, and also in Ceylon; see *Quinine*.

JESUS CHRIST, the SAVIOUR OF THE WORLD. 1 Tim. iii. 16. The following dates given in the English bible have been much controverted, and others have been proposed by eminent chronologers, such as Hales and Clinton, see *Nativity* and *Crucifixion*. The birth of Christ is

dated, 4 B.C.; his baptism and first ministry, 27 A.D.; his crucifixion, resurrection, and ascension, 33 A.D.

Jewels were worn in France by Agnes Sorel in 1434, and encouraged in England about 1685. The standard of gold for jewellery, except wedding rings, was lowered by parliament in 1854.

JEWISH ERA AND CALENDAR. The Jews usually employed the era of the Seleucidæ until the 15th century, when a new mode of computing was adopted. They date from the creation, which they consider to have been 3760 years and 3 months before the commencement of our era. To reduce Jewish time to ours, subtract 3761 years. The Jewish year consists of either twelve or thirteen months, of 29 or 30 days. The civil year commences with the month Tisri, immediately after the new moon following the autumnal equinox; the ecclesiastical year begins with Nisan.

JOHN DOE AND RICHARD ROE, names well known, as standing pledges for the prosecution of suits. In early times real and substantial persons were required to pledge themselves to answer to the crown for an amercement or fine set upon the plaintiff, for raising a false accusation, if he brought an action without cause, or failed in it; and in 1285, 13 Edw. I. sheriffs and bailiffs were, before they made deliverance of the distress, to receive pledges for pursuing the suit, and for the return of the property, if return were awarded. But this becoming a matter of form, the fictitious names of Doe and Roe were used until the form was declared to be no longer necessary by the Common Law Procedure Act, 1852.

JOHN O'GROAT'S HOUSE, an ancient house formerly situated on Duncan's Bay Head, the most northerly point of Great Britain, deriving its name from John of Groat, or Groot, and his brothers, originally from Holland, said to have settled here about 1489.

The house was of an octagon shape, being one room, with eight windows and eight doors, to admit eight members of the family, the heads of different branches of it, to prevent their quarrels for precedence at table. Each came in by this contrivance at his own door, and sat at an octagon table, at which, of course, there was no chief place or head.

JUAN FERNANDEZ, an island in the Pacific, named from its discoverer in 1567. Alexander Selkirk, a native of Scotland, left on shore here by his captain in Nov. 1704, and lived alone till he was discovered by captain Rogers in 1709. He died lieutenant of H.M.S. *Weymouth*, 1723. A monument to his memory was erected on the island in 1868, then colonised by Germans. From his narrative De Foe is said to have derived his *Adventures of Robinson Crusoe*, first published in 1719. The present governor, Rodt, a Swiss adventurer, settled on the island about 1874.

JUAN, SAN, a small island, near Vancouver's island. The possession of this island, on account of its commanding the straits between British Columbia and the United States territories, led to disputes between the two countries, owing to the doubtful interpretation of the treaty of Washington respecting the boundaries, 12 June, 1846. See *United States*, 1859 and 1860. The matter (by the treaty of Washington, 8 May, 1871) was referred for arbitration to the emperor of Germany, who decided in favour of the United States, Oct. 1872. The isle was evacuated by the British 22 Nov. following.

JUGGERNAUT, correctly *Jagannâth*, or "Lord of the World," one of the incarnations of Krishna, is an idol formed of an irregular pyramidal black stone, with two rich diamonds to represent eyes; the nose and mouth are painted vermilion. The number of pilgrims that visit the god is stated at 1,200,000 annually. Formerly some were crushed by the wheels of the car (so lately as Aug. 1864); a great many never returned, and, to the distance of fifty miles, the way was strewed with human bones. The temple of Juggernaut has existed about 800 years. The state allowance to the temple was suspended by the Indian government in June, 1851. The festival was kept, June, 1872. Twelve persons were said to be killed by accident, Aug. 1873. The festival of 1878 reported a failure.

JUGURTHINE WAR. Jugurtha murdered his cousin, Hiempsal, king of Numidia, and usurped his throne, 118 B.C. He gave Adherbal a share in the government, but killed him in 112. He then provoked the Romans to war. Cæcilius Metellus was first sent against him, and defeated him in two battles; and Marius brought him in chains to Rome to adorn his triumph, 106 B.C., where he was put to death in 104. This war has been celebrated by the pen of Sallust.

JULIAN ERA and YEAR, see *Calendar*. *Julian period* (by Joseph Scaliger, about 1583), a term of years produced by the multiplication of the lunar cycle 19, solar cycle 28, and Roman indiction 15. It consists of 7980 years, and began 4713 years before our era. It has been employed in computing time to avoid the ambiguity attendant on reckoning any period antecedent to our era, an advantage in common with the mundane eras used at different times. By subtracting 4713 from the Julian period, our era is found; if before Christ, subtract the Julian period from 4714.

JULIERS, a Prussian province; made a duchy in 1356; became the subject of contention on the extinction of the ruling family in 1609; was allotted to Neuburg in 1659; seized by the French in 1794; and ceded to Prussia in 1815.

JULY, the seventh, originally fifth, Roman month, named by Marc Antony from *Julius* Cæsar, the dictator of Rome, who was born in it.

July Revolution. See *France*, 1830.

JUNE, originally the fourth, now the sixth month, owes its name to *Junius*, which some derive from *Juno*, and others from *Juniores*, this being the month for the young, as May was for aged persons. Ovid, in his *Fasti*, introduces Juno as claiming this month. "Glorious 1st of June;" see *Ushant*.

JUNG RIVER, west Africa. Natives chastised for outrage on Mr. Laborde, envoy, and others, by gen. Havelock, governor of Sierra Leone, May, 1882.

JUNIUS'S LETTERS began in the *Public Advertiser*, 21 Jan. 1769.

They have been ascribed to Mr. Wm. Burke, Mr. William Gerard Hamilton, commonly called Single-speech Hamilton, John Wilkes, Mr. Dunning (afterwards lord Ashburton), serjeant Adair, the rev. J. Rosenhagen, John Roberts, Charles Lloyd, Samuel Dyer, general Lee, the duke of Portland, Hugh Boyd, lord George Sackville, earl Temple, and sir Philip Francis. The last-named is generally considered to have been the author. Junius said, "I am the depositary of my own secret, and it shall perish with me." The work of Mr. Chabot and hon. E. T. B. Twisleton was considered decisive of sir Philip Francis being Junius, May, 1871. "Junius is as much unknown as ever."—*Athenæum*, 8 Sept. 1888.

Sale of manuscript papers of sir Philip Francis, reported to be inconclusive respecting "Junius," June, 1892; the sir Philip Francis correspondence sold for 430*l.* 2*s.* . . . . . 27 Nov. 1897

Mr. Charles Knight in his description of the letters in his "Popular History of England," 1860, asserts that they abound in gross exaggeration and venomous abuse. Mr. H. R. Francis, in his "Junius" *Revealed*, published March, 1894, maintains that his grandfather (Sir Philip) was Junius. The *Athenæum* (17, 24 March, 1894, and Mr. Fraser Rae, in 6 papers, 19 Feb. 1898) considers the book unsatisfactory.

JUNKER PARTY (*Junker*, German for *young noble*), a term applied to the aristocratic party in Prussia, which came into power under Otho von Bismarck-Schönhausen, appointed prime minister, 9 Oct. 1862. Their political organ is the *Kreuz-Zeitung*.

JUPITER, known as a planet to the Chaldeans. The discovery of the satellites, incorrectly attributed to Simon Mayr (Marius) in 1609, was made by Galileo on 8 Jan. 1610; see *Planets*. JUPITER'S moons were all invisible on 21 Aug. 1867; a very rare occurrence. A fifth very small satellite was discovered by Mr. Barnard at the Lick observatory, 9 Sept 1892.—JUPITER AMMON'S temple in Libya was visited by Alexander, 332 B.C. Cambyses' army sent against it perished miserably, 525 B.C. The Greek Zeus was the Roman Jupiter, contracted from Diovis pater, the father of Heaven.

JURIDICAL SOCIETY was established in Feb. 1855, and opened with an address by sir R. Bethell on 12 May following.

JURIES. Trial by jury was introduced into England during the Saxon heptarchy, mention being made of six Welsh and six Anglo-Saxon freemen appointed to try causes between the English and Welsh men of property, and made responsible, with their whole estates real and personal, for false verdicts. *Lambard.* By most authorities their institution is ascribed to Alfred about 886, which is not historical. In *Magna Charta*, juries are insisted on as the great bulwark of the people's liberty. When either party is an alien born, the jury shall be one half denizens, and the other half aliens, stat. 28 Edw. III. 1353. By the common law a prisoner upon indictment or appeal might challenge peremptorily thirty-five, being under three juries; but a lord of parliament, and a peer of the realm, who is to be tried by his peers, cannot challenge any of his peers. An act for the trial by jury in civil cases in Scotland was passed in 1815. An act to consolidate and amend the laws relating to juries in Ireland was passed 4 Will. IV. 1833. A new act respecting juries, regulating their payment, &c., was passed 9 Aug. 1870. The clause respecting their payment was rescinded by act passed 28 Feb. 1871. Laws respecting juries in Ireland amended, 14 Aug, 1871. New Juries bill brought in by the attorney-general, sir John Coleridge, Feb. 1873. Special juries bill passed, May, 1898. Juries are summoned to assist the coroner in investigating the causes of sudden or violent death.—GRAND JURIES (of not less than 12 or more than 23 persons), decide whether sufficient evidence is adduced to put the accused on trial.—The constitution of 1791 established the trial by jury in France.—An imperial decree abolished trial by jury throughout the Austrian empire, 15 Jan. 1852.—Trial by jury began in Russia, 8 Aug. 1866; in Spain, 1889—A true bill for libel granted against alderman sir F. Truscott in his absence, who was honourably acquitted, 18 Sept. 1879.

COERCION OF JURIES.—It is said that in early times the suitors used to feed the jury empanelled in their action, and hence arose the common law of denying sustenance to a jury after the hearing of the evidence. A jury may be detained during the pleasure of the judge if they cannot agree upon a verdict; and may be confined without meat, drink, or fire, candle light excepted, till they are unanimous.—Some jurors have been fined for having fruit in their pockets, when they were withdrawn to consider of their verdict, though they did not eat it. *Leon Dyer*, 137. A jury at Sudbury not being able to agree, and having been some time under duress, forcibly broke from the court where they were locked up, and went home, 9 Oct. 1791. *Phillips.* In Scotland, Guernsey, Jersey, and France, juries decide by a majority; in France, since 1831, a majority of two-thirds is required.

"JUSTE MILIEU" (moderation and conciliation to parties), according to Louis-Philippe (in 1830), is the only principle of government which can secure the welfare of France.

JUSTICE GENERAL, Lord, Scotland, see *Court of Session*.

JUSTICES OF THE PEACE are unpaid local magistrates, invested with extensive powers in minor cases, but subject to supersession and punishment by the King's Bench for an abuse of their authority. They were first nominated by William I. in 1076. *Stow.* Persons termed conservators of the peace in each county were appointed by 1 Edw. III. c. 2, 1327; and their duties were defined in 1360. The form of a commission of the peace settled by the judges, 23 Eliz. 1580. *Hawkins*; see *Eyre*.

JUSTICES, LORDS, were appointed by English sovereigns to govern during their absence; especially by William III., George I. and George II. (1695-1760). George III. never left England. In Sept. 1821, when George IV. went to Hanover, lords justices were appointed, the duke of York being the first. No such appointment has been made during the present reign, it having been decided by the law authorities in 1843 to be unnecessary when the queen went to France. Ireland is always ruled by lords justices when the lord-

lieutenant is out of the country, or his office is vacant.—Two *lords justices of the court of appeal in chancery*, having rank next after the chief baron of the exchequer, were appointed from 1 Oct. 1851, salary 6000*l*. For recent changes see *Appeal*.

JUSTICIARS. In ancient times the kings of England used to hear and determine causes; but it is declared by law that if the king cannot determine every controversy, he, to ease himself, may divide the labour among persons, men of wisdom and fearing God, and out of such to appoint judges. The Saxon kings of England appointed a judge after this manner, who was, in fact, the king's deputy. After the Norman conquest, the person invested with that power had the style of *Capitalis Justiciæ*, or *Justiciarius Angliæ*. These judges continued until the erection of the courts of king's bench and the common pleas. The first justiciars of England were Odo, bishop of Bayeux, and William Fitz-Osborne, in 1067; and the last was Philip Basset, in 1261, or Hugh le Despencer, 1263 (Henry III). Authorities vary.

These compilations have since been called, collectively, the body of civil law (*Corpus Juris Civilis*).

The siege lasted from 18 June to 28 Nov. 1855. The sufferings of the garrison were very great from cholera and want of food. The Russians made a grand assault on 29 Sept. but were repulsed with the loss of above 6000 men, and the garrison were overcome by famine alone. *Sandwith*. Kars was restored to Turkey, Aug. 1856.

On accepting general Williams' proposal for surrendering, general Mouravieff said:—"General Williams, you have made yourself a name in history; and posterity will stand amazed at the endurance, the courage, and the discipline which this siege has called forth in the remains of an army. Let us arrange a capitulation that will satisfy the demands of war, without disgracing humanity." KEEPER OF THE KING'S CONSCIENCE. The early chancellors were priests, and out of their supposed moral control of the king's mind grew the idea of an equity court in contradistinction to the law courts. A bill in chancery is a petition through the lord chancellor to the king's conscience for remedy in matters for which the king's common law courts afford no redress. The keeper of the king's conscience is therefore now the officer who

presides in the court of chancery; see *Chancellor* and *Lord Keeper*.

After the battle of Evesham and defeat and death of Simon de Montfort, by Prince Edward (afterwards Edward I.) 1265, Montfort's younger son, Simon, shut himself up in Kenilworth castle, which sustained a siege for six months against the royal forces of Henry III., to whom it at length surrendered. KHARTOUM, capital of Nubia, at the confluence of the Blue and White Nile, built by Mohamed Ali, 1820. Its prosperity was destroyed by the rapacity of the governors. Population in 1877 only about 15,000.

After successful administration col. Charles George Gordon compelled to leave Khartoum, and returned to England. 1877
In his defence of Khartoum against the Mahdi (from Feb. 1884) he was greatly aided by colonel John Donald Stewart and Mr. Frank Power, correspondent of the *Times* (who were both massacred during an expedition, Sept. 1884). He manifested much military skill, political sagacity, tender humanity, and marvellous power in inducing his followers to overcome serious difficulties and patiently endure great sufferings and privations.
Khartoum was surrendered, and Gordon and his faithful followers killed, early on 26 Jan. 1885. See under *Soudan*.

KHERSON, an ancient Dorian colony (deriving its name from Chersonesus, a peninsula), came under the sway of the great Mithridates about 120 B.C.; and afterwards under that of Rome, A.D. 30. It continued important, and its possession was long disputed by the Russians and Greeks. Justinian II. cruelly treated it. It was taken by Vladimir, grand-duke of Russia in 988, when he and his army received Christian baptism, and he married the emperor's sister Anne, who obtained Kherson as her dowry. The city was destroyed by the Lithuanians; and the Turks found it deserted when they took possession of the Crimea in 1475. What ancient remains the Turks and Tartars had spared, the Russians conveyed away for the construction of Sebastopol.

KHERSON, a Russian city on the Dnieper, founded 1778. Potemkin, the favourite of Catherine, who died at Jassy in 1791, is buried here, and John Howard, the English philanthropist, who died here, 20 Jan. 1790, is buried about three miles from the town, where an obelisk has been erected to his memory, by the czar Alexander I.

KHIVA (formerly Carasmia), in Turkestan, Asia, successively formed part of the territories of the Seleucidæ, Bactria, Parthia, Persia, and the Califate, till about 1092, when it was subjugated by the Seljuk Tartars, by the Moguls in 1221, and by Timour the Tartar in 1370, whose descendants ruled till 1511, when they were expelled by the Uzbegs, a Turkish tribe who still inhabit the country. An expedition sent against it by the emperor Nicholas of Russia in 1839 perished through the rigour of the climate in 1840. In 1875, colonel F. A. Burnaby reached Khiva, after a perilous ride, when his progress was stopped by Russian jealousy. Population, about 700,000 (1894).

Here was the nunnery of St. Bridget, said to have been founded by her in the 5th century, and here was a building called the fire-house, where, it is supposed, the nuns kept the inextinguishable fire which existed till the reformation. The see was one of the earliest episcopal foundations in Ireland; St. Conlæth, who died 519, the first prelate. The first Protestant bishop was Thomas Lancaster, in 1550. The see is valued, by an extent returned 39 Hen. VIII., at 69*l.* 11*s.* 4*d.* Irish per year. Kildare was united to Dublin in 1846; see *Dublin*. KILLALA (Sligo), an early see. The author of the Tripartite life of St. Patrick, says, "that in 434 he came to a pleasant place where the river Muadas (Moy) empties itself into the ocean; and on the south banks of the said river he built a noble church called Kil-Aladh, of which he made one of his disciples, Muredach, the first bishop." The see of Achonry was united to Killala in the 17th century; and both were united to Tuam in 1839; see *Tuam* and *Bishops*.

* The key-stone of the works at Holtenau was solemnly laid by the emperor William, and the canal was named by him, in memory of his grandfather, the *Kaiser Wilhelm* canal. Kiel was for several days the scene of great festivities. The flags of 14 nations were floating in the harbour on upwards of 80 sea-going men-of-war, and over 300 yachts and steamers of various nationalities were present. Dr. von Boetticher, president of the committee of commerce, received much honour from the emperor for his great services in relation to this national work.

* It enacted among other things, "that the alliance of the English by marriage with any Irish, the nurture of infantes, and gossipred with the Irish, be deemed high treason." And again, "if anie man of English race use an Irish name, Irish apparell, or anie other guize or fashion of the Irish, his lands shall be seized, and his body imprisoned, till he shall conform to English modes and customs." Said never to have been enforced. It abolished the Brehon laws.

The term *Treaty of Kilmainham* was applied to an alleged agreement between Mr. Gladstone's government and Mr. Parnell and other land-leaguers imprisoned in the Kilmainham gaol on 13 Oct. 1881. The government is said to have entered into a negotiation with them while there, May, 1882.

KILMALLOCK (Limerick). An abbey was founded here by St. Mochoallog or Molach about 645, and an abbey of Dominicans was built in the 13th century. *Ware.* A charter was granted to Kilmallock by Edward VI., and another by Elizabeth in 1584. KING: German *König*, equivalent in meaning to the Latin *Rex*, Scythian *Reis*, Spanish *Rey*, Italian *Rè*, French *Roy*: Hebrew *Rosch*. *Rex* is thought to be connected with the Hindu rajah, derived from the Sanscrit *ragan*, the root of which is *arg*, *argami*, to possess. *Rex* therefore means possessor. Lionel having by his wife the honour of Clare, was made duke of Clarence; which dukedom afterwards escheating to Edward IV., he revived the office of Clarence king-at-arms. KING'S BENCH PRISON (Southwark), near the site of one of the oldest prisons of London, long used for the confinement of debtors. Here, it is said, prince Henry (afterwards Henry V.) was committed by Justice Gascoigne. The prison was burnt down by the London rioters, 7 June, 1780; see *Gordon's No-Popery Riots*. It was rebuilt in 1781, and contained about 230 rooms. Formerly, the debtors were allowed to purchase the liberties, to enable them to have houses or lodgings without the walls, or to purchase day-rules, to go out of the prison under certain regulations. The rules included St. George's Fields, &c. A consequence of the bankruptcy act, 1861, was the release of many insolvent debtors; and an act was passed in 1862 "for discontinuing the queen's prison and removal of the prisoners to Whitecross-street prison." KISSING the hands of great men was a Grecian custom. Kissing was a mode of salutation among the Jews, 1 *Samuel* x. 1, &c. The "kiss of charity," or "holy kiss," commanded in the Scriptures (*Romans* xvi. 16, &c.), was observed by the early Christians, and is still recognised by the Greek church and some others. Kissing the pope's foot (or the cross on his slipper) began with Adrian I. or Leo III. at the close of the 8th century.

KNEELING. The knee was ordered to be bent at the name of Jesus (see *Philippians* ii. 10), about the year 1275, by the order of the pope. The ceremony of a vassal kneeling to his lord is said to have begun in the 8th century.

KNIGHTS. The word knight is derived from the Saxon *Cniht*, a servant (*i.e.*, servant to the king, &c.). The institution of the Roman knights (*Equites* or horsemen, from *equus*, a horse), is ascribed to Romulus, about 750 B.C., when the curiæ elected 300. Knighthood was conferred in England by the priest at the altar, after confession and consecration of the sword, during the Saxon heptarchy. The first knight made by the sovereign with the sword of state was Athelstane, by Alfred, A.D. 900. *Spelman.* The custom of ecclesiastics conferring the honour of knighthood was suppressed in a synod held at Westminster in 1100. *Ashmole's Institutes. Salmon.* On the decline of the empire of Charlemagne, all Europe being reduced to a state of anarchy, the proprietor of every manor became a petty sovereign; his mansion was fortified by a moat, and defended by a guard, and called a castle. Excursions were made by one petty lord against another, and the women and treasure were carried off by the conqueror. At length the owners of rich fiefs associated to repress these marauders, to make property secure, and to protect the ladies; binding themselves to these duties by a solemn vow, and the sanction of a religious ceremony. Cervantes' "Don Quixote," a satire on knight-errantry, was published in 1605; see *Banneret*, *Chivalry*, *Tournaments*, *Holy Sepulchre*, *John*, and *Michael*.

FEMALE KNIGHTS. It is said that the first were the women who preserved Tortosa from the Moors in 1149, by their stout resistance. Large immunities were granted to the women and their descendants. Several female orders appear in the preceding list. Ladies have been admitted to several male orders.

KNIGHTS OF GLYN AND KERRY IN IRELAND. The heads of two branches of the family of Fitzgerald, who still enjoy the distinctions bestowed on their ancestors by sovereigns in the 13th century. The 19th knight of Kerry died 6th Aug. 1880.

KNIGHTS OF THE SHIRE, OR OF PARLIAMENT; summoned by the king's writ and chosen by the freeholders, first summoned by Simon de Montfort, in 1258, and in a more formal manner, 20 Jan. 1265. There are writs extant as far back as 11 Edward I., 1283. The knights are still girded with a sword when elected, as the writ prescribes.

KNIGHTS OF LABOUR. A large secret trade union in the United States, said to have been originated by a man named Uriah Stevens in Philadelphia in 1869, for protection of workmen against capitalists. They were energetic in the promotion of railway and other strikes, especially in Missouri in March, 1886. Head quarters at Philadelphia, number about 400,000, May, 1886. The society is condemned by the pope. Decline of the order reported Aug. 1888; active in Aug. 1890. *Knights of Industry* active in regard to strikes, 1893.

KNIVES. In England, Hallamshire (the country round Sheffield) has been renowned for its cutlery for five centuries; Chaucer speaks of the "Sheffield thwytel." Stow says that Richard Mathews on the Fleet-bridge was the first Englishman who made *fine* knives, &c.; and that he obtained a prohibition of foreign ones, 1563. Clasp or spring knives became common about 1650; coming originally from Flanders.—*Knife-cleaning machines* were patented by Mr. George Kent in 1844 and 1852; others have been invented, by Masters, Price, &c.; see *Forks*.

KNOW-NOTHINGS, a society which arose in 1853, in the United States of N. America. Their principles were embodied in the following propositions (at New York, 1855). They possessed several newspapers and had much political influence:—

1. The Americans shall rule America.
2. The Union of these States.
3. No North, no South, no East, no West.
4. The United States of America—as they are—one and inseparable.
5. No sectarian interferences in our legislation or in the administration of American law.
6. Hostility to the assumption of the pope, through the bishops, &c., in a republic sanctified by Protestant blood.
7. Thorough reform in the naturalisation laws.
8. Free and liberal educational institutions for all sects and classes, with the Bible, God's holy word, as a universal text-book.

A society was formed in 1855 in opposition to the above, called *Know-Somethings*. Both bodies were absorbed into the two parties, Democrats and Republicans, at the presidential election in Nov. 1856.

KONIEH (formerly Iconium). Here the Turkish army was defeated by the pasha of Egypt, after a long sanguinary fight, 21 Dec. 1832. The grand vizier was taken prisoner.

KÖNIGGRÄTZ (Bohemia). Near here was fought the decisive battle between the Austrians commanded by marshal Benedek, and the Prussians commanded by their king William I., 3 July, 1866. Prince Frederick Charles halted at Kammeniz on Monday, 2 July, his troops commenced their march at midnight, and the first shot was fired about 7·30 a.m. 3 July. The attack began at Sadowa (after which the battle is also named) about 10 o'clock, and a desperate struggle ensued, the result appearing uncertain, till the army of the crown prince of Prussia arrived about 12·30. When Chlum, which had been taken and lost seven times by the Prussians, was taken for the eighth time, the fate of the day was decided; and the retreat of the Austrians, at first orderly, became a hasty disastrous flight. About 400,000 men were engaged in this battle, one of the greatest in modern times. The Austrians are said to have lost 174 guns, about 40,000 killed and wounded, and 20,000 prisoners. The Prussians lost about 10,000 men. The victory gave the supremacy in Germany to Prussia, unity to North Germany, and Venetia to Italy; and led to the legislative independence of Hungary.

KÖNIGSBERG, the capital of east Prussia, was founded by the Teutonic knights in 1255, and became the residence of the grand master in 1457. It joined the Hanseatic league in 1365. University founded, 1544. It was ceded to the elector of Brandenburg in 1657, and here Frederick III. was crowned the first king of Prussia in 1701. It was held by the Russians 1758-64, and by the French in 1807. It was made to hold 233,667 gallons of wine; and on the top, which was railed in, was accommodation for twenty persons to regale themselves. The famous tun of St. Bernard's was said to hold 800 tons; see *Heidelberg Tun*.

KOOKAS, a warlike reforming sect in N. W. India, founded by Baluk Ram about 1845, and after his death, about 1855, headed by Ram Singh, who preached the restoration of the old Sikh religion, which venerated cattle and punished their slaughterer. After several outrages against the Mahometans, an outbreak of the Kookas took place near Loodiana, which was vigorously suppressed, 15 Jan. 1872, by commissioner Cowan, who ordered 49 prisoners to be blown from cannon, 17 Jan. Several others were tried and executed by commissioner Forsyth soon after. For this severity Mr. Cowan was ordered to be dismissed, and Mr. Forsyth removed to another station, April, 1872. The Kooka leaders claim 800,000 followers; but the probable number is about one-tenth.

KORAN or ALCORAN (AL KURAN), the sacred book of the Mahometans, was written about 610, by Mahomet (who asserted that it had been revealed to him by the angel Gabriel in twenty-three years), and published by Abu-bekr about 635. Its general aim was to unite the professors of idolatry and the Jews and Christians in the worship of one God (whose unity was the chief point inculcated), under certain laws and ceremonies, exacting obedience to Mahomet as the prophet. The leading article of faith preached is compounded of an eternal truth and a necessary fiction, namely, that there is only one God, and that Mahomet is the apostle of God. *Gibbon*. The Koran was translated into Latin in 1143; into French, 1647; into English by Sale, 1734; and into other European languages, 1763 *et seq*. It is a rhapsody of 6000 verses, divided into 114 sections; see *Mahometanism*, &c.

KOSZTA AFFAIR. Martin Koszta, a Hungarian refugee, when in the United States in 1850, declared his intention of becoming an American citizen, and went through the preliminary forms. In 1853 he visited Smyrna, and on 21 June was seized by a boat's crew of the Austrian brig *Huzzar*. By direction of the American minister at Constantinople, captain Ingraham, of the American sloop *St. Louis*, demanded his release; but having heard that the prisoner was to be clandestinely transported to Trieste, he demanded his surrender by a certain time, and prepared to attack the Austrian vessel on 2 July; Koszta was then given up. On 1 Aug., the Austrian government protested against these proceedings in a circular addressed to the European courts, but eventually a compromise was effected, and Koszta returned to the United States.

LACE is said to have been made in the 14th century in France and Flanders. Its importation into England was prohibited in 1483; but it was used in the court costume of Elizabeth's reign. Dresden, Valenciennes, Mechlin, and Brussels, have long been famous for their fine lace. An ounce weight of Flanders thread has been frequently sold for four pounds in London; and its value, when manufactured, has been increased to forty pounds, ten times the price of standard gold. A framework knitter of Nottingham, named Hammond, is said to have invented a mode of applying his stocking-frame to the manufacture of lace from studying the lace on his wife's cap, about 1768. *Macculloch.* So many improvements have been made in this manufacture,

particularly by Heathcote (1809, 1817, &c.), Morley and Leaver (1811, &c.), that a piece of lace which about 1809 cost 17*l.* may now be had for 7*s.* (1853). *Ure.* The process of "gassing" by which cotton lace is said to be made equal to fine linen lace, was invented by Samuel Hall of Basford, near Nottingham. See *Spanish-American War*, 20 June.

LADY. The masters and mistresses of manor-houses, in former times, served out bread to the poor weekly; and were therefore called *Lafords* and *Lef-days*—signifying *bread givers* (from *hlaf*, a loaf): hence Lords and Ladies. Wedgewood considers this fanciful, and derives the words from the Anglo-Saxon, *laford*, lord, and *hlæfdig*, lady.—LADY DAY (March 25), a festival instituted about 350, according to some authorities, and not before the 7th century according to others; see *Annunciation.* The year, which previously began on this day, was ordered to begin on Jan. 1, in France in 1564; and in Scotland, by proclamation, on 17 Dec. 1599; but not in England till 3 Sept. 1752, when the style was altered.

LAGOS, an island in the Bight of Benin (Africa), was assaulted and taken by the boats of a British squadron, under commodore Bruce, 26, 27 Dec. 1851. This affair arose out of breaches of a treaty for the suppression of the slave-trade. In 1861, the place was ceded to the British government, and created a settlement: Henry Stanhope Freeman, first governor. Lagos was constituted a distinct colony in 1886, see *Gold Coast Colony.*

LAKE DWELLINGS contain relics of the stone, iron, and brass ages. Herodotus (about 450 B.C.) described the Pæonians as living on platforms in Lake Prasias. In 1855, Dr. Keller discovered the remains of lake habitations which had been supported on piles in several Swiss lakes ages ago. His book was published in England in 1866. Similar relics discovered in lake Constance, March, 1882; they have also been discovered in Britain and various parts of Europe, Africa, and South America; they are now considered to be evidence of a stage in human progress. The artificial fortified islands termed "Crannoges" discovered in some Irish lakes are attributed to the 9th and 10th centuries. They have been frequently used as places of refuge. *Artificial lake*, see under *Liverpool*, 1881 *et seq.*

Mr. Arthur Bulleid, in the spring of 1892, discovered, by excavation, near Glastonbury, in Somersetshire, remains of a pre-historic lake-village, in about 60 low mounds, enclosing wooden structures, many of which had been probably workshops. The many interesting relics of bronze, iron, bone, &c., with fragments of pottery, were deposited in the Glastonbury museum; R. Munro, M.D., "Lake Dwellings of Europe," Sept. 1892; excavations continued . 1897

Lambeth Palace. A considerable portion was built in the 13th century, by Hubert Walter, archbishop of Canterbury. The tower of the church was erected about 1375; and other parts of the edifice in the 15th century. Simon of Sudbury, archbishop of Canterbury, was killed here by the followers of Wat Tyler, who attacked the palace, burnt the furniture and books, and destroyed the registers and public papers, 14 June, 1381. The domestic portion of the palace was greatly enlarged for archbishop Howley (who died 1848), by Mr. Blore, at an expense of 52,000*l.* The palace was reopened after restoration, Oct. 1873; see *Canterbury, Articles.* For Lambeth Conference see *Pan-Anglican Synods.* Lambeth bridge was freed from toll 24 May, 1879.

LAMMAS-DAY, the 1st of August, one of our four cross quarter-days of the year. Whitsuntide was the first, Lammas the second, Martinmas the third, and Candlemas the last; and such partition of the year was once equally common with the present divisions of Ladyday, Midsummer, Michaelmas, and Christmas. Some rents are yet payable at each of these quarterly days in England, and very generally in Scotland. *Lammas* probably comes from the Saxon *hlammæsse*, loaf mass, because formerly upon that day our ancestors offered bread made of new wheat. Anciently, those tenants that held lands of the cathedral church of York were by tenure to bring a lamb alive into church at high mass.

LAMPETER COLLEGE (Cardiganshire), was founded by bishop Burgess in 1822, and incorporated 1828. Henry James Prince, founder of the Agapemone (*which see*), was one of the revivalist Lampeter brotherhood, instituted among the students here about 1836.

LAMPS. The earthen lamp of Epictetus the philosopher sold after his death for 3000 drachmas. Lamps with horn sides said to be the invention of Alfred. London streets were first lighted with oil-lamps in 1681, and with gas-lamps in 1814. A lamp "constructed to produce neither smoke nor smell, and to give considerably more light than any lamp hitherto known," was patented by M. Aimé Argand in 1784, and was brought into general use in England early in the present century. On his principle are founded the lamps invented by Carcel about 1803, and since 1825, the moderator lamps of Levavasseur, Hadrot, and Neuburger. See *Safety Lamp.* Paraffin oil and naphtha spirit are now much used in lamps. The Water Safety Lamp invented by Mr. Devoll, was tried and approved 2 June, 1890. The flame is extinguished by the water if the lamp is overturned. See *Petroleum.*

LANCASTERIAN SCHOOLS, based on a system of education by means of mutual instruction,

devised by Joseph Lancaster about 1796, were not much patronised till about 1808. The system led to the formation of the British and Foreign School society, in 1805, whose schools are unsectarian, and use the Bible as the only means of religious instruction. Lancaster was accidentally killed at New York in 1838.

LANCET, a weekly medical journal, established and edited by Thomas Wakley, surgeon (afterwards coroner for Middlesex and M.P. for Finsbury), first published 3 Oct. 1823. An injunction obtained by Mr. Abernethy against the publication of his lectures in the "*Lancet*," was dissolved by the lord chancellor in 1825. Mr. Wakley, born 1795, died 16 May, 1862. The proprietors of the "Lancet" have at various times employed medical men as commissioners of enquiry. The reports of the Analytical Sanitary Commission of the "Lancet" in 1851-54, were published by Dr. A. H. Hassall, as "Food and its Adulterations," in 1855. The "Lancet" commissioners (three physicians) enquired into the state of workhouse infirmaries in London, 1865, and in the country, 1867.

LANGUAGE must either have been revealed originally from heaven, or the fruit of human invention. The latter opinion is embraced by Horace, Lucretius, Cicero, and most of the Greek and Roman writers; the former by the Jews and Christians, and many modern philosophers. Some suppose Hebrew to have been the language spoken by Adam; others say that the Hebrew, Chaldee, and Arabic are only dialects of the original tongue. "And the whole earth was of one language and of one speech," *Genesis* xi. 1.* George I. in 1724, and George II. in 1736, appointed regius professors of modern languages and of history to each of the universities of England.

The original European languages were thirteen, viz.: Greek, Latin, German, Sclavonian, spoken in the east; Welsh; Biscayan, spoken in Spain; Irish; Albanian, in the mountains of Epirus; Tartarian; the old Illyrian; the Jazygian, remaining yet in Liburnia; the Chaucin, in the north of Hungary; and the Finnic, in east Friesland.
From the Latin sprang the Italian, French, Spanish, and Portuguese.
The Turkish is a mixed dialect of the Tartarian.
From the Teutonic sprang the present German, Danish, Swedish, Norwegian, English, Scotch, &c.
There are 3424 known languages, or rather dialects, in the world. Of these, 937 are Asiatic; 587 European; 276 African; and 1624 American languages and dialects. *Adelung.*

In the dark ages the country was named Septimania (probably from its containing seven important towns) : afterwards Languedoc (from its dialect, see *Troubadours*), about 1270, when annexed to the monarchy. Laon surrendered to the Germans 9 Sept. 1870. As the last man of the garde mobile left the citadel, a French soldier, in contravention of the capitulation, blew up the powder magazine, causing great destruction to the town and fortress. The grand-duke William of Mecklenburg-Schwerin was bruised, and 95 German riflemen and 300 French gardes mobiles were killed or wounded ; general Theremin Du Hame, the commander, was wounded. The French attributed the explosion to accident.

LA PEROUSE'S VOYAGE. In 1785 La Perouse sailed from France for the Pacific, with the *Boussole* and *Astrolabe* under his command, and was last heard of from Botany Bay, in March, 1788. LATIN KINGDOM, EMPIRE, &c., see *Latium, Eastern Empire* 1204, and *Jerusalem.*

LATIN LANGUAGE (founded on the Oscan, Etruscan, and Greek), one of the original languages of Europe, and from which sprang the Italian, French, and Spanish; see *Latium*. A large portion of our language is derived from the Latin. It ceased to be spoken in Italy about 581; and was first taught in England by Adelmus, brother of Ina, in the 7th century. The use of Latin in law deeds in England gave way to the common tongue about 1000; was revived in the reign of Henry II.; and again was replaced by English in the reign of Henry III. It was finally discontinued in religious worship in 1558, and in conveyancing and in courts of law in 1731 (by 4 Geo. II. c. 25). A corrupt Latin is still spoken in Roumelia. The foreign pronunciation of Latin (*a*, ah; *e*, a; *i*, e, &c.) was adopted in English universities and many schools about 1875-6. For "Latin name," see *Latium*.

LATITAT, an ancient writ, directing the sheriff to apprehend persons to be brought before the king's bench court, had its name from its being supposed that the person was lying hid, and could not be found in the county to be taken by bill. The writ was abolished by the Uniformity of Process act, 23 May, 1832.

LATITUDE. First determined by Hipparchus of Nice, about 162 B.C. It is the extent of the earth or the heavens, reckoned from the equator to either pole. Maupertuis, in 1737, in latitude 66·20 measured a degree of latitude, and made it 69·493 miles. Swanberg, in 1803, made it 69·292. At the equator, in 1744, four astronomers made it 68·732; and Lambton, in latitude 12, made it 68·743. Mudge, in England, made it 69·148. Cassini, in France, in 1718 and 1740, made it 69·12; and Biot, 68·769; while a recent measurement in Spain makes it but 68·63—less than at the equator, and contradicts all others, proving the earth to be an oblate spheroid (which was the opinion of Cassini, Bernouilli, Euler, and others), instead of a prolate spheroid; see *Longitude*.

LAW REFORM.

Law Amendment Society, founded in 1843. It holds meetings during the session of parliament, and publishes a journal and reports. Its first chairman was lord Brougham, who introduced the subject of Law Reform by a most eloquent speech in the house of commons, on 7 Feb. 1828. Many acts for Law Reform have been passed since, and vigorous measures proposed.

Royal commission to inquire into the operation and constitution of the English courts of law, &c., issued Sept. 1867.

The Judicature Commission (appointed 1867) recommended the consolidation of all the superior courts into one supreme court divided into chambers, April, 1869. It issued its fifth and last report, Sept. 1874.

The High Court of Justice Bill introduced into the house of lords, 18 March, 1870, was dropped near the end of the session.

Law-Courts.—Commissioners appointed in 1859 reported in favour of the concentration of the law-courts in London, on a site near Carey-street, Chancery-lane, about 7 acres, on which stood about 400 houses. The estimated expense was about 1,500,000*l.*, which it was recommended to take from the accumulated Chancery fund, termed "Suitors' fund." Acts of parliament to carry out the plan were passed in 1865 and 1866.

Competitive designs were invited, and after much discussion (public and professional), Mr. Street's design was selected, 30 May, 1868; much attacked, but approved by the commission, Aug. 1870; contracts signed 17 Feb. 1874, and the works were begun immediately by Bull and Son, to be finished in 1881.

There were to be 18 courts, varying in size; a central hall, 231 feet long, 48 feet wide, 30 feet high; principal entrance in the Strand.

Offices in Eastern Block occupied 21 April, 1879.

Buildings completed, Oct. 1882.

LAW'S BUBBLE. John Law, of Edinburgh (born 1681), was made comptroller-general of the finances of France, upon the strength of a scheme for establishing a bank and an East India and a Mississippi company, by the profits of which the national debt of France was to be paid off. See *Mississippi*. He first offered his plan to Victor Amadeus, king of Sardinia, who told him he was not powerful enough to ruin himself. The French ministry accepted it; and in 1716, he opened a bank in his own name, under the protection of the duke of Orleans, regent of France, and the deluded rich subscribed for shares both in the bank and the companies. In 1718 Law's was declared a royal bank, and the shares rose to upwards of twenty-fold the original value; so that, in 1719, they were worth more than eighty times the amount of all the current specie in France. In 1720 this fabric of false credit fell to the ground, spreading ruin throughout the country. Law died in poverty at Venice in 1729.—The South Sea Bubble in England occurred in 1720; see *South Sea*.

LAWN TENNIS, see *Tennis*.

LAYAMON'S BRUT, or Chronicle of Britain, a poetical semi-Saxon paraphrase of the Brut of Wace, made between 1100 and 1230, was published with a literal translation by sir Frederick Madden, in 1847.

LAYBACH (near Trieste, in Illyria). A congress met here in Jan. 1821, and was attended by the sovereigns of Austria, Russia, Prussia, and Naples. Layer was hanged, 17 May, 1723. He was hanged for enlisting soldiers for the Pretender. Bishop Atterbury was accused of complicity and attainted, but permitted to quit the country.

LAZZARITES, see *Italy*, 1878.

LAZZARONI (from *lazzáro*, Spanish for a pauper or leper), a term applied by the Spanish viceroys to the degraded beings in Naples, half-clothed and houseless. No man was born a lazzáro; and he who turned to a trade ceased to be one. The viceroy permitted the lazzaroni to elect a chief with whom he conferred respecting the imposts on the goods brought to the markets. In 1647, Masaniello held the office, and made an insurrection; see *Naples*. In 1793, Ferdinand IV. enrolled several thousands of lazzaroni as pikemen (spontoneers), who generally favoured the court party; on 15 May, 1848, they were permitted, on the king's behalf, to commit fearful ravages on the ill-fated city.—*Colletta*.

LEAD is found in various countries, and is abundant in various parts of Britain, and in some places richly mixed with silver ore. The famous Clydesdale mines were discovered in 1513. Pattinson's valuable method for extracting the silver was made known in 1829. The lead-mines of Cumberland and Derbyshire yield about 15,000 tons per annum. British mines produced 65,529 tons of lead in 1855; 69,266 in 1857; 67,181 in 1865; 73,420 in 1870; 58,777 in 1875; 58,667 in 1876; 51,635 in 1879; 50,328 in 1882; 40,075 in 1884; 37,890 in 1887; in 1888, 37,578; 1889, 35,604; 1890, 33,590; 1893, 29,698; 1896, 30,818.

LEAP-YEAR or BISSEXTILE, originated with the astronomers of Julius Cæsar, 46 B.C. They fixed the solar year at 365 days, 6 hours, comprising, as they thought, the period from one vernal equinox to another; the six hours were set aside, and at the end of four years, forming a day, the fourth year was made to consist of 366 days. The day thus added was called intercalary, and was placed a day before the 24th of February, the sixth of the calends, which was reckoned *twice*, hence called *bissextile* or *twice sixth.* This added day with us is Feb. 29th; see *Calendar.* This arrangement makes the year nearly three minutes longer than the astronomical year: to obviate this, 1700 and 1800 were not, and 1900 will not be leap-years, but 2000 will be one; see *Calendar* and *Year.*

LEARNING AND THE ARTS flourished among the Greeks, under Pisistratus, 537 B.C., and especially under Pericles, 444 B.C.; and with the Romans at the commencement of the Christian era, under Augustus. The Greek refugees caused their revival in Italy, particularly after the taking of Constantinople by the Turks in 1453, and the invention of printing shortly before,—the period of the *Renaissance.* Leo X. and his family (the *Medici*) greatly promoted learning in Italy, in the 16th century; when literature revived in France, Germany, and England; see *Literature*, and authors under *Greek*, *Latin*, *English*, and other *languages.*

LEATHER was very early known in Egypt and Greece, and the thongs of manufactured hides were used for ropes, harness, &c., by all ancient nations. The Gordian knot was made of leather thongs, 330 B.C. A leather cannon was proved at Edinburgh, fired three times, and found to answer, 23 Oct. 1778. *Phillips.* The duty on leather imposed 1697, produced annually in England, 450,000*l.* and in Ireland about 50,000*l.* It was abolished, 29 May, 1830. Many bankruptcies were declared in the leather trade, in the autumn of 1860 in England. In the case of Lawrence, Mortimore, and Co., enormous fraudulent dealings in bills were disclosed. A plan for making artificial leather out of cuttings, &c., was made known in 1860.—*Leather cloth* (invented by Messrs. J. R. & C. P. Crockett, of Newark, U.S., and patented in 1849) is unbleached cotton coated with a mixture of boiled linseed oil and turpentine, and coloured. LECTURES. Those on Physic were instituted by Dr. Thomas Linacre, of the College of Physicians (founded by Henry VIII.) about 1502. *Clinical* lectures, at the bed-side of the patients in hospitals are said to have been given (by Dr. John Rutherford) in Edinburgh, about 1748; in Dublin, about 1785; in London, by sir B. C. Brodie (1813-17). Mr. G. Macilwain, about 1824, gave surgical clinical lectures in connection with a dispensary. The political lectures of Thelwall, commenced in Jan. 1795, were interdicted by an act of parliament. In the autumn of 1857 and since, many distinguished noblemen and gentlemen lectured at mechanics' institutes. An act passed in 1835 prohibited the publication of lectures without the consent of the lecturers. See *Gresham College*, *Boyle's Lectures*, *Royal* and *London Institutions*, *Trials*, 1887, &c.

LEGHORN, *Livorno*, Tuscany, a mere village in the 15th century, owes its prosperity to the Medici family. It suffered dreadfully by an earthquake in 1741; and was entered by the French army, 27 July, 1796, but the British property had been removed. It was held by the French 1796-9 and retaken, 1800. It was unsuccessfully attacked by the British and Italian forces in Dec. 1813. The Austrians took this city from the insurgents, 12, 13 May, 1849, and quelled a slight insurrection, July 6, 1857. In June, 1857, above 60 persons were killed at the theatre, through an alarm of fire; see *Tuscany* and *Italy*. Population, 1890, 104,960.

LEGION, a corps of soldiers in the Roman armies, said to have been formed by Romulus, when it consisted of 3000 foot and 300 horse, about 720 B.C. When Hannibal was in Italy, 216 B.C., the legion consisted of 5200 soldiers; and under Marius, in 88 B.C., it was 6200 soldiers besides 700 horse. There were ten, and sometimes as many as eighteen, legions kept at Rome. Augustus had a standing army of 45 legions, together with 25,000 horse and 37,000 light-armed troops, about 5 B.C.; and the peace establishment of Adrian was thirty of these formidable brigades. A legion was divided into ten cohorts, and every cohort into six centuries, with a vexillum, or standard, guarded by ten men. The peace of Britain was protected by three legions. See *Thundering Legion*.

LEGION OF HONOUR, a French order embracing the army, civil officers, and other individuals distinguished for services to the state; instituted by Napoleon Bonaparte, when first consul, 19 May, 1802, to replace the old suppressed orders of knighthood, &c. The order was confirmed by Louis XVIII. in 1815, and its constitution modified in 1816 and 1851. The honour was conferred on many British subjects who distinguished themselves in the Russian war, 1854-6, and in the Paris exhibitions of 1855, 1867, 1878 and 1889. The palace and offices were burnt by the communalists, 23 May, 1871. The Legion comprised upwards of 54,000 members in 1887. The alleged traffic in decorations caused much excitement, Oct. 1887; council censured by the chamber, resigns, 16 July; plans for re-organisation proposed, Oct.; gen. Davout made grand chancellor of the reconstituted council, Dec. 1895. See *France*.

At Breitenfeld, near here, Gustavus Adolphus, king of Sweden, defeated the Imperialists, under Tilly, 7 Sept. 1631; and the Imperialists were again defeated here by the Swedes, under Torstensen, 23 Oct. 1642. Here took place, on 16, 18, 19 Oct. 1813, "*the battle of the nations*," between the French army and its allies, commanded by Napoleon (160,000), and the Austrian, Russian, and Prussian armies (240,000 strong). The French were beaten chiefly owing to 17 Saxon battalions, their allies, turning upon them in the heat of the engagement. 80,000 men perished on the field, of whom more than 40,000 were French, who also lost 65 pieces of

artillery, and many standards. The victory was followed by the capture of Leipsic, of the rear guard of the French army, and of the king of Saxony and his family. Lent was first observed in England by command of Ercombert, king of Kent, in 640 or 641. *Baker's Chron.* Flesh was prohibited during Lent; but Henry VIII. permitted the use of *white meats* by a proclamation in 1543, which continued in force until, by proclamation of James I., in 1619 and 1625, and by Charles I., in 1627 and 1631, flesh was again wholly forbidden; see *Ash-Wednesday, Quadragesima*.

LEPROSY, a skin disease described in *Leviticus* xiii. (B.C. 1490), which prevailed in ancient times throughout Asia. It has now almost disappeared from Europe. It chiefly affected the lower classes, yet occasionally proved fatal to the very highest personages. Robert Bruce of Scotland died of leprosy in 1329. A hospital for lepers was founded at Granada, by queen Isabella of Castile, about 1504, and a large number of leper houses were founded in Britain. Dr. Edmondson met with a case in Edinburgh in 1809.

The great increase of leprosy in the Sandwich Islands compelled the government to isolate the lepers, and large numbers were transported to Molokai, where they endured much suffering. Since 1873 Father Joseph Damien (de Venster), R. C. Belgian missionary, devoted his whole life most successfully to their general relief, and finally died of their disease, aged 49, 10 April, 1889. Other missionaries, male and female, are continuing his labours.

The *Father Damien Memorial Fund*, under the auspices of the prince of Wales, was founded about 18 June, 1889; and on 29 June it was determined to set up a memorial statue of Father Damien at Kalawao, and to establish a fund for the medical treatment of the disease in the United Kingdom, and for the promotion of the study of it at home and abroad especially in India.

LEVELLERS, a fanatical party in Germany, headed by Muncer and Storck in the 16th century, who taught that all distinctions of rank were usurpations on the rights of mankind. At the head of 40,000 men, Muncer commanded the sovereign princes of Germany and the magistrates of cities to resign their authority; and on his march his followers ravaged the country. The landgrave of Hesse at length defeated him at Frankenhausen, 15 May, 1525; 7000 of the enthusiasts fell in the battle, and the rest fled; their leader was taken and beheaded at Mulhausen. The English "Levellers," powerful in parliament in 1647, were put down by Cromwell in 1649, and their leader Lilburn was tried and acquitted. At the period of the French revolution some Levellers appeared in England. A "Loyal Association" was formed against them by John Reeves, Nov. 1792.

LEVELS. The great Level of the Fens is a low-lying district of about 2000 square miles, in Lincolnshire, Huntingdonshire, Cambridgeshire, and Norfolk, said to have been overflown by the sea during an earthquake, 368. It was long afterwards an inland sea in winter, and a noxious swamp in summer, and was gradually drained—by the Romans, the Saxons, and especially by the monks during the reigns of the Plantagenet kings. One of the first works on a large scale was carried out by Morton, bishop of Ely, in the reign of Henry VII. A general drainage act was passed by the advice of lord Burghley, in 1601, but little work was done till the reign of James I., who, in 1621, invited over the great Dutch engineer, Cornelius Vermuyden, to assist in the general drainage of the country. After completing several great works, Vermuyden agreed (in 1629) to drain the "Great Level." He was at first prevented from proceeding with his undertaking through a popular outcry against foreigners; but eventually, aided by Francis, earl of Bedford, in spite of the great opposition of the people, for whose benefit he was labouring, he declared his great work complete in 1652. He also reclaimed much valuable land at Axholme, in Lincolnshire, 1626-30, and many Dutch and French protestants settled here about 1634; and a few of their descendants still remain.—There are the Middle, Bedford, South, and North Levels.

The drainage of the Great Level employed the talents of Rennie (about 1807), and of Telford (1822), and of other eminent engineers.

LIBEL. By the Roman laws of the Twelve Tables, libels which affected the reputation of another were made capital offences. In the British law, whatever renders a man ridiculous, or lowers a man in the opinion and esteem of the world, is deemed a libel. "The greater the truth the greater the libel," the well known law maxim of a high authority, is

now disputed; see *Trials*, 1788, 1790, 1792, 1803, 1808 *et seq.*, 1863, 1882; and (note) *Patents* and *Times*.

An action for libel was brought in the court of King's Bench by a bookseller named Stockdale, against Messrs. Hansard, the printers to the house of commons; this action related to an opinion expressed in a parliamentary report of a book published by Stockdale, 7 Nov. 1836. Lord Denman, in giving judgment, said he was not aware that the authority of the house of commons could justify the publication of a libel—an opinion which led to some proceedings on the part of the house, and to other actions by Stockdale . 1837-39
Verdicts were given in his favour, and in Nov. 1839, the sheriffs took possession of Hansard's premises. This caused much excitement in parliament, and they were ordered to appear at the bar of the house of commons, and were formally committed to the custody of the serjeant-at-arms, 21 Jan., but immediately discharged: the conflict was maintained by the law officers and the commons till . . . . . LICHFIELD (Staffordshire). The see of Mercia (at Lichfield) was founded about 656; removed to Chester, 1075; to Coventry, 1102. In 1121 Robert Peche was consecrated bishop of Lichfield and Coventry. By an order in council, Jan. 1837, the archdeaconry of Coventry was added to the see of Worcester, and Dr. Samuel Butler became bishop of Lichfield. This see has given three saints to the Romish church; and to the British nation one lord chancellor and three lord treasurers. It is valued in the king's books at 559*l.* 18*s.* 2*d.* Present income, 4200*l.* Population, 1881, 8,349; 1891, 7,864.

Lichfield cathedral was first built about 656; the present structure was founded by Roger de Clinton, the 37th bishop, in 1148. Walter de Langton (bishop in 1296), built the chapel of St. Mary, now taken into the choir, and under bishop Heyworth (1420) the cathedral was perfected. The building was despoiled at the Reformation, and was scandalously injured in the parliamentary war (when its monuments, its fine sculptures, and beautifully painted windows, were demolished). It was repaired at the restoration, 1660; in 1788; and by Gilbert G. Scott, 1860-63 and 1884.

In Lichfield castle, king Richard II. kept his Christmas festival, 1397, when 200 tuns of wine and 2000 oxen were consumed. A charter was granted to Lichfield, constituting it a city, by Edward VI., 1549. It was absorbed into the county in 1885.

LICINIAN LAWS. In 375 B.C., C. Licinius Stolo and L. Sextius, tribunes of the people, promulgated various rogationes or laws to weaken the power of the patricians and benefit the plebeians: one was to relieve the plebeians from their debts; another enacted that no person should possess more than 500 jugera of the public land, or more than 100 head of large cattle, or 500 of small, in the Roman states; and the third, that one of the consuls should be a plebeian. After much opposition these were carried, and L. Sextius became the first plebeian consul, 366. Another law, 56 B.C., of this name, imposed a severe penalty on party clubs, or societies assembled for election purposes; and another, about 103 B.C. (brought forward by P. Licinius Crassus), limited the expenses of the table.

In 1482 Liége fell into the power of De la Marck, the Boar of Ardennes, who killed the bishop, Louis of Bourbon, and was himself defeated and killed. Liége was taken by the duke of Marlborough, 23 Oct. 1702; and by the French and others, at various times, up to 1796, when it was annexed to France. It was incorporated with the Netherlands in 1814, and with Belgium in 1830. LIFE-PRESERVER, the apparatus of capt. Manby (brought into use in Feb. 1808), effects a communication with the distressed vessel by a rope, thrown by a shot from a mortar, with a line attached to it. For the night, a night-ball is provided with a hollow case of thick pasteboard, and a fuse and quick match, and charged with fifty balls, and a sufficiency of powder to inflame them. The fuse is so graduated that the shell shall explode at the height of 300 yards. The balls spread a brilliant light for nearly a minute, and give a clear view of every surrounding object. In 20 years, 58 vessels and 410 of their crews and passengers had been saved. Capt. Manby died 18 Nov. 1854, aged 89. See *Rockets*.

LIGHT. The law of refraction discovered by Snellius, about 1624. The motion and velocity of light discovered by Reaumur, and after him by Cassini, and calculated by Rœmer (1676) and Bradley (1720). Its velocity ascertained to be about 190,000,000 of miles in sixteen minutes, or nearly 200,000 miles in a second, which is a million of times swifter than the velocity of a cannon ball, about 1667. The light of the sun takes eight minutes and eight seconds for its transmission through space to the earth. See *Emission Theory*. The undulatory theory of light, its polarisation, and its chemical action, have all been made known in the present century by Dr. Thos. Young, Weber, Fresnel, Malus, Arago, Biot, Brewster, Wheatstone, Ritter, Niepce, Daguerre, Talbot, Stokes, Tyndall, Rayleigh, Dewar, Crookes, &c.; see *Optics*, *Photography*, *Calorescence*, *Fluorescence*, *Röntgen Rays*.

Cornu's improved tooth-wheel apparatus gave 300,400 kilometres in a second of mean time . . 1874
Professor Simon Newcomb, of Washington, with his "phototachometer" (completed in May, 1880) gave 299,860 kilometres in a second of mean time, 1886
Mr. aft. sir Wm. Crookes, F.R.S., considered that he had demonstrated the mechanical action of light by experiments with delicate balances in the highest procurable vacuum, and calculated the force of the sun's rays upon the earth to be 2.3 tons to the square mile, 1873-6. His apparatus was termed *Radiometer* (*which see*). After much investigation, Mr. Crookes admitted that the action was not due to radiation, but to difference of heat-absorption and the reaction of residual air.

LIGHTHOUSE, called Pharos (now *phare*, French; *faro*, Italian), from one erected at Pharos, (*which see*) near Alexandria, Egypt, 550 feet high, said to have been visible forty-two miles, about 283 B.C. There was one at Messina, at Rhodes, &c. The light was obtained by fires. A coal-fire light was exhibited at Tynemouth castle, Northumberland, about 1638. The first true lighthouse erected in England was the Eddystone lighthouse (*which see*) in 1758-60. Lights were exhibited in various places by the corporation of the Trinity-house early in the 16th century. 2814 lighthouses in the world (1867).

BRITISH LIGHTHOUSES.

6 lighthouses building, April, 1867.
The French have 224 lighthouses on shore.
The source of light in our lighthouses is principally oil; but in harbour lights gas has been successfully used. Glass reflectors were used in 1780, and copper ones in 1807. A common coal-fire light was discontinued at St. Bees so recently as 1822. Fresnel's Dioptric system (*which see*), devised about 1819, was adopted for the first time in England by Messrs. Wilkins, at the direction of the corporation of the Trinity-house, 1 July, 1836.
The most brilliant artificial light ever produced—derived from magneto-electricity by a machine devised by professor Holmes—was first employed at the South Foreland lighthouse, near Dover, on 8 Dec. 1858; and at Dengeness (or Dungeness) in 1862. Mr. Holmes' arrangement, and a similar one constructed by M. Serin, were shown at the International exhibition, London, in 1862.

LIGHTING UP (Towns, &c.), see *London*, 1684, 1694; *Gas* and *Electric Light*.

LIGHTNING-CONDUCTORS were first set up for the protection of buildings by Franklin shortly after 1752, when he brought down electricity from a thunder-cloud. Richmann, of St. Petersburg, was killed while repeating these experiments, Aug. 1752. The first conductor in England was set up at Payne's Hill, by Dr. Watson. In 1766 one was placed on the tower of St. Mark, at Venice, which has since escaped injury, although frequently injured by lightning previously. A powder magazine at Glogau, in Silesia, was saved by a conductor in 1782; and, from the want of one, a quantity of gunpowder was ignited at Brescia in 1767, and above 3000 persons perished. In 1762, Dr. Watson recommended conductors to be used in the navy; and they were employed for a short time, but soon fell into disuse from want of skill and attention. Mr. (afterwards sir William) Snow Harris devoted his attention to the subject from 1820 to 1854, and published a work, in 1843, detailing his experiments. In 1830, above thirty ships were fitted up with his conductors, and in 1842 his plans were adopted, and his conductors are now manufactured in the royal dockyards. In 1854 parliament granted him 5000*l.*

LIMA (Peru). In 1534, Pizarro, marching through Peru, was struck with the beauty of the valley of Rimac, and there he founded this city, and gave it the name of *Ciudad de los Reyes*, or city of the kings, 1535. Here he was assassinated, 26 June, 1541. Awful earthquakes occurred here, 1586, 1630, 1687, and 28 Oct. 1746. In 1854-5, thousands perished by yellow fever. LIME or LINDEN TREE, probably introduced in the 16th century. The limes in St. James's park are said to have been planted at the suggestion of Evelyn, who recommended multiplying odoriferous trees, in his "Fumifugium" (1661). A lime-tree planted in Switzerland in 1410, existed in 1720, the trunk being thirty-six feet in circumference.

LIME-LIGHT, produced by the combustion of oxygen and hydrogen or carburetted hydrogen on a surface of lime. This light evolves little heat and does not vitiate the air. It is also called Drummond Light, after its inventor, lieut. Thomas Drummond, who successfully produced it as a first-class light in 1826, and employed it on the ordnance survey. It is said to have been seen at a distance of 112 miles. It was tried at the South Foreland lighthouse in 1861. Lieut. Drummond was born, 1797, died 15 April, 1840. To him is attributed the maxim that "property has its duties as well as its rights."

LIMERICK, anciently Lumneach (S. W. Ireland). About 550, St. Munchin is said to have founded a bishopric and built a church here, which latter was destroyed by the Danes in 853. Donald O'Brien, king of Limerick, founded the cathedral about 1200. Limerick obtained its charter in 1195, when John Stafford was made first provost; and its first mayor was Adam Servant, in 1198. It was

taken by Ireton after six months' siege in 1650. In Aug. 1690 it was invested by the English and Dutch, and surrendered on most honourable terms, 3 Oct. 1691.* An awful explosion of 218 barrels of gunpowder greatly shattered the town, killing 100 persons, 1 Feb. 1694. Another explosion of gunpowder here killed many persons, 2 Jan. 1837. Awful and destructive tempest, 6-7 Jan. 1839. A new graving-dock was opened by the lord-lieutenant, earl Spencer, 13 May, 1873. LIMITED LIABILITY. An act for limiting the liability of joint stock companies, 18 & 19 Vict. c. 133 (passed 1855), was several times amended 1856-7-8. On 31 May, 1864, "3830 joint stock companies had been formed and registered on the limited liability principle, and 938 had ceased to exist." Much calamity in 1866 was occasioned by the abuse of the system. The Companies act of 1862 was amended in 1867. 1241 registered in 1874; 1,791 registered in 1886; total 1862-86, 25,042. LINCELLES (N. France), where the allied English and Dutch armies defeated the French, 18 Aug. 1793. General Lake commanded three battalions of foot guards.

LINCOLN, the Roman *Lindum Colonia*, and at the period of the conquest rich and populous. It was taken several times by Saxons and Danes. The castle was built by William I. in 1086. Without Newport-gate upon Lincoln plain was fought the battle between the partisans of the empress Maud, commanded by the earl of Gloucester, and the army of Stephen, in which the king was defeated and taken prisoner, 2 Feb. 1141. Louis, dauphin of France, invited over by the discontented barons in the last year of king John's reign, was acknowledged by them as king of England here; but the nobility, summoned by the earl of Pembroke to Gloucester to crown Henry III., marched against Louis and the barons, and defeated them in a most sanguinary fight (called the Fair of Lincoln), 20 May, 1217; and Louis withdrew. Theatre Royal burnt, 26 Nov. 1892. Population, 1881, 37,313; 1891, 41,491.

Sidnacester or Lindisse and Dorchester, two distinct sees in Mercia, were united about 1078, and the see was removed to Lincoln by bishop Remigius de Feschamp, who built a cathedral (1086), afterwards destroyed by fire, but rebuilt by bishop Alexander (1127) and bishop Hugh of Burgundy. The diocese is very large, although the dioceses of Ely (1109), Oxford, and Peterborough (1541) were formed from it, and were further enlarged in 1837. The see was valued at the dissolution of monasteries at 2065*l.* per annum; and after many of its manors had been seized upon, it was rated in the king's books at 894*l.* 10*s.* 1*d.* Present income, 4500*l.* It has given three saints to the church of Rome, and to the civil state of England six lord chancellors. LINCOLN'S-INN (London), derives its name from Henry de Lacy, earl of Lincoln, who erected a mansion on this spot in the reign of Edward I., which had been the bishop of Chichester's palace. It became an inn of court, 1310. The gardens of Lincoln's-inn-fields were laid out by Inigo Jones, about 1620, and erroneously said to occupy the same space as the largest pyramid of Egypt, which is 764 feet square; Lincoln's-inn square being 821 feet by 625 feet 6 inches. William lord Russell was beheaded in Lincoln's-inn-fields, 21 July, 1683. The square (formed in 1618) was enclosed with iron railings about 1737. The new hall and other buildings were opened, 30 Oct. 1845, and the square planted. The *theatre* in Lincoln's-inn-fields was built in 1695; rebuilt in 1714; made a barrack in 1756, and pulled down in 1848. The fields (enclosed in 1735) opened to the public (cost 12,000*l.*) by sir John Hutton, L.C.C., 23 Feb. 1895.

LISMORE (S. Ireland.) St. Carthagh, first bishop, 636, says: "Lismore is a famous and holy city, of which nearly one-half is an asylum where no woman dare enter." The castle (built by king John when earl of Moreton, 1185,) burnt in 1645, was rebuilt with great magnificence by the duke of Devonshire. The cathedral, built 636, was repaired by Cormac, son of Muretus, king of Munster, about 1130. The bishopric was united to that of Waterford, about 1363; and both to Cashel in 1839.

During the action, the ironclad *Palestro* took fire and exploded, and all on board perished (except 19 out of 200 men), exclaiming, *Viva il Rè! Viva Italia!* The *Rè d'Italia* was surrounded and sunk by the Austrians. The *Rè di Portobello* disabled the Austrian line-of-battle ship *Kaiser*, and compelled her to run ashore. LITHIUM, the lightest metal known (specific gravity 0·59: atomic weight 7) is obtained from an alkaline substance termed *lithia;* discovered by M. Arfwedson, a Swede, in 1817.

LITHOFRACTEUR, or "STONE-BREAKER," an explosive material, a modification of dynamite (composed of gun-cotton, nitro-glycerine, with the constituents of gunpowder, and other substances), invented by professor Engels of Cologne, and made by Krebs, in 1869. It was occasionally used by the Germans in the war 1870-1, and was tried and well reported of for power and safety at Nant Mawy quarries, near Shrewsbury, 9, 10 May, 1871, and again on 20 Feb. 1872, before the government explosive committee, with similar results.

LITHOGRAPHY (drawing on stone). The invention is ascribed to Alois Senefelder, about 1796; and shortly afterwards the art was announced in Germany, and was known as polyautography. It became partially known in England in 1801, *et seq.*, but its general introduction is referred to Mr. Ackermann, of London, about 1817. Senefelder died in 1841. Improvements have been made by Engelmann and many others; see *Printing in Colours.*

LITHOSCOPE. An instrument for distinguishing precious stones, invented by sir David Brewster; described by him Jan. 1864.

LITHOTOMY. The surgical operation of cutting for the stone, it is said, was performed by Ammonius, about 240 B.C. The "small apparatus," so called from the few instruments used in the operation, was practised by Celsus, about A.D. 17. The "high apparatus" was practised (on a criminal at Paris) by Colot, 1475; by Franco, on a child, about 1566; and in England, by Dr. Douglass, about 1519. The "lateral operation," invented by Franco, much performed in Paris by Frère Jacques, in 1697, has been greatly improved. The "great apparatus" was invented by John de Romanis, and described by his pupil Marianus Sanctus, 1524.

* Floyer Sydenham, an eminent Greek scholar, of Wadham college, Oxford, and translator of some of the works of Plato, was arrested and thrown into prison for a trifling debt due for his frugal meals, and there, in 1788, died of a broken heart in want and misery, when nearly eighty years of age. The sympathy excited gave rise to this institution, since well supported. Williams was in early life a dissenting minister, and wrote on education. He was consulted by the early revolutionary party in France as to the form of a constitution for that country; he, Dr. Priestley, sir James Mackintosh, and other distinguished Englishmen, having been previously declared French citizens. He died 29 June, 1816

LITHOTRITY (or bruising the stone). The apparatus produced by M. Leroy d'Etiolles in 1822 has since been improved.

Prizes of 6000 and 10,000 francs were awarded M. Jean Civiale for his method of operation, 1827 & 1829.

LITHUANIA, formerly a grand-duchy, N. E. of Prussia. The natives (belonging to the Slavonic race) long maintained their independence against the Russians and Poles. In 1386, their grand-duke Jagellon became king of Poland and was baptized: Lithuania was not incorporated with Poland till 1501, when another duke Casimir, became king of that country. The countries were formally united in 1569. The larger part of Lithuania now belongs to Russia, the remainder to Prussia.

LITURGIES (from the Greek *leitos*, public, and *ergon*, work). The Greek and Roman liturgies are very ancient, having been committed to writing about the 4th and 5th centuries. The Romish church recognises four: the Roman or Gregorian, the Ambrosian, the Gallican, and the Spanish or Mosarabic. The Greek church has two principal liturgies: St. Chrysostom's and St. Basil's, and several smaller ones. Parts of these liturgies are attributed to the Apostles, to St. Ignatius, 250, to St. Ambrose (died 397), and to St. Jerome (died 420).

The present English Liturgy was first composed, and was approved and confirmed by parliament, in 1547-8. The offices for morning and evening prayer were then put into nearly the same form in which we now have them, and published 1549 and 1552.
At the solicitation of Calvin and others, the liturgy was reviewed and altered 1551
It was first read in Ireland, in the English language, in 1550, and in Scotland, where it occasioned a tumult, in 1637, and was withdrawn . 1638
The liturgy was revised by Whitehead, formerly chaplain to Anne Boleyn, and by bishops Parker, Grindall, Cox, and Pilkington, dean May, and secretary Smith.
John Knox is said to have used a liturgy for several years. The rev. Robert Lee, of Edinburgh, introduced a form of prayer in public worship, but gave it up when ordered to discontinue it in May, 1859; he soon after resumed it, and the discussion on the subject ceased only at his death, 14 March, 1868

LIVERIES OF THE CITY OF LONDON. The term is derived from the custom of the retainers of the lord mayor and sheriffs wearing clothes of the form and colour displayed by those functionaries. Liveries were regulated by statute in 1392, and frequently since. The nobility gave liveries to their retainers. See *Companies*.

LIVERPOOL (W. Lancashire), is supposed to be noticed in Domesday-book under the name *Esmedune*, or *Smedune*.* Soon after the conquest, William granted that part of the country situated between the rivers Mersey and Ribble to Roger of Poitiers, who, according to Camden, built a castle here, about the year 1089. It afterwards was held by the earls of Chester and dukes of Lancaster. Liverpool is the second city of the Empire. LLOYD'S (London), at the Royal Exchange about 1692. A coffee-house, kept by Edwd. Lloyd, Abchurch-lane, became a place of meeting of merchants. After several removals it was established finally at the Royal Exchange in 1774, and remained there till the fire in 1838, when it was removed till the present building was completed in 1844. Here resort eminent merchants and shipowners, and here are effected insurances on ships and merchandise. A Register of ships began about 1764; and the terms A. 1, &c. were used about 1775. Two societies (underwriters and merchants) were united, and one register issued, Oct. 1834. Jubilee celebrated, 31 Oct. 1884. Lloyd's is supported by subscribers who now pay annually 5*l.* 5*s.*, formerly 4*l.* 4*s.* The books kept here contain an account of the arrival and sailing of vessels, and are remarkable for their early intelligence of maritime affairs. Many new signalling stations established, 1882-3. First annual issue of the "Universal Shipping Register," published here, May, 1886. In 1803, the subscribers instituted the *Patriotic Fund* (*which see*). It has established regular communication between Trieste and the Levant, by means of a fleet of steamers carrying the mails, and publishes a journal.

LOLLARDS (by some derived from the German *lollen*, to sing in a low tone, by others derived from the English verb to loll or lounge) the name given to the first reformers of the Roman catholic religion in England, the followers of Wykliffe. The sect is also said to have been founded in 1315 by Walter Lollard, who was burnt for heresy at Cologne in 1322. The Lollards are said to have devoted themselves to acts of mercy. The first Lollard martyr in England was William Sawtree, parish priest of St. Osith, London, 12 Feb. 1401, when the Lollards were proscribed by parliament, and numbers of them were burnt alive. Sir John Cobham, lord Oldcastle, a follower of Wykliffe, was accused of treason and condemned, Sept. 1413. He escaped to Wales, where he was captured, and brought to London and burnt, 25 Dec. 1418. Lollards' tower, part of the bishop's prison, was near St. Paul's, not Lambeth palace. *Dr. Maitland.*

III. 1299. They had offices in the street named after them to this day. Their usurious transactions caused their expulsion from the kingdom in the reign of Elizabeth.

LIGHT. The law of refraction discovered by Snellius, about 1624. The motion and velocity of light discovered by Reaumur, and after him by Cassini, and calculated by Rœmer (1676) and Bradley (1720). Its velocity ascertained to be about 190,000,000 of miles in sixteen minutes, or nearly 200,000 miles in a second, which is a million of times swifter than the velocity of a cannon ball, about 1667. The light of the sun takes eight minutes and eight seconds for its transmission through space to the earth. See *Emission Theory*. The undulatory theory of light, its polarisation, and its chemical action, have all been made known in the present century by Dr. Thos. Young, Weber, Fresnel, Malus, Arago, Biot, Brewster, Wheatstone, Ritter, Niepce, Daguerre, Talbot, Stokes, Tyndall, Rayleigh, Dewar, Crookes, &c.; see *Optics*, *Photography*, *Calorescence*, *Fluorescence*, *Röntgen Rays*.

His apparatus was termed *Radiometer* (*which see*). After much investigation, Mr. Crookes admitted that the action was not due to radiation, but to difference of heat-absorption and the reaction of residual air.

LIGHTHOUSE, called Pharos (now *phare*, French; *faro*, Italian), from one erected at Pharos, (*which see*) near Alexandria, Egypt, 550 feet high, said to have been visible forty-two miles, about 283 B.C. There was one at Messina, at Rhodes, &c. The light was obtained by fires. A coal-fire light was exhibited at Tynemouth castle, Northumberland, about 1638. The first true lighthouse erected in England was the Eddystone lighthouse (*which see*) in 1758-60. Lights were exhibited in various places by the corporation of the Trinity-house early in the 16th century. 2814 lighthouses in the world (1867).

The source of light in our lighthouses is principally oil; but in harbour lights gas has been successfully used. Glass reflectors were used in 1780, and copper ones in 1807. A common coal-fire light was discontinued at St. Bees so recently as 1822. Fresnel's Dioptric system (*which see*), devised about 1819, was adopted for the first time in England by Messrs. Wilkins, at the direction of the corporation of the Trinity-house, 1 July, 1836.
The most brilliant artificial light ever produced—derived from magneto-electricity by a machine devised by professor Holmes—was first employed at the South Foreland lighthouse, near Dover, on 8 Dec. 1858; and at Dengeness (or Dungeness) in 1862. Mr. Holmes' arrangement, and a similar one constructed by M. Serin, were shown at the International exhibition, London, in 1862.

LIGHTING UP (Towns, &c.), see *London*, 1684, 1694; *Gas* and *Electric Light*.

LIGHTNING-CONDUCTORS were first set up for the protection of buildings by Franklin shortly after 1752, when he brought down electricity from a thunder-cloud. Richmann, of St. Petersburg, was killed while repeating these experiments, Aug. 1752. The first conductor in England was set up at Payne's Hill, by Dr. Watson. In 1766 one was placed on the tower of St. Mark, at Venice, which has since escaped injury, although frequently injured by lightning previously. A powder magazine at Glogau, in Silesia, was saved by a conductor in 1782; and, from the want of one, a quantity of gunpowder was ignited at Brescia in 1767, and above 3000 persons perished. In 1762, Dr. Watson recommended conductors to be used in the navy; and they were employed for a short time, but soon fell into disuse from want of skill and attention. Mr. (afterwards sir William) Snow Harris devoted his attention to the subject from 1820 to 1854, and published a work, in 1843, detailing his experiments. In 1830, above thirty ships were fitted up with his conductors, and in 1842 his plans were adopted, and his conductors are now manufactured in the royal dockyards. In 1854 parliament granted him 5000*l.*

LIME or LINDEN TREE, probably introduced in the 16th century. The limes in St. James's park are said to have been planted at the suggestion of Evelyn, who recommended multiplying odoriferous trees, in his "Fumifugium" (1661). A lime-tree planted in Switzerland in 1410, existed in 1720, the trunk being thirty-six feet in circumference.

LIME-LIGHT, produced by the combustion of oxygen and hydrogen or carburetted hydrogen on a surface of lime. This light evolves little heat and does not vitiate the air. It is also called Drummond Light, after its inventor, lieut. Thomas Drummond, who successfully produced it as a first-class light in 1826, and employed it on the ordnance survey. It is said to have been seen at a distance of 112 miles. It was tried at the South Foreland lighthouse in 1861. Lieut. Drummond was born, 1797, died 15 April, 1840. To him is attributed the maxim that "property has its duties as well as its rights."

LIMERICK, anciently Lumneach (S. W. Ireland). About 550, St. Munchin is said to have founded a bishopric and built a church here, which latter was destroyed by the Danes in 853. Donald O'Brien, king of Limerick, founded the cathedral about 1200. Limerick obtained its charter in 1195, when John Stafford was made first provost; and its first mayor was Adam Servant, in 1198. It was

taken by Ireton after six months' siege in 1650. In Aug. 1690 it was invested by the English and Dutch, and surrendered on most honourable terms, 3 Oct. 1691.* An awful explosion of 218 barrels of gunpowder greatly shattered the town, killing 100 persons, 1 Feb. 1694. Another explosion of gunpowder here killed many persons, 2 Jan. 1837. Awful and destructive tempest, 6-7 Jan. 1839. A new graving-dock was opened by the lord-lieutenant, earl Spencer, 13 May, 1873. A new R. C. cathedral, St. John's, consecrated, 21 June, 1894. Population, 1881, 38,555; 1891, 37,072.

By it actions for trespass or debt, or simple contract, must be commenced within six years after the cause of action, and actions for assault, menace, or imprisonment within four years. The Real Actions Limitation act, 1874, came into operation 1 Jan. 1879.

LIMITED LIABILITY. An act for limiting the liability of joint stock companies, 18 & 19 Vict. c. 133 (passed 1855), was several times amended 1856-7-8. On 31 May, 1864, "3830 joint stock companies had been formed and registered on the limited liability principle, and 938 had ceased to exist." Much calamity in 1866 was occasioned by the abuse of the system. The Companies act of 1862 was amended in 1867. 1241 registered in 1874; 1,791 registered in 1886; total 1862-86, 25,042. The principle adopted by some joint stock banks in 1879-80. See under *Banks*.

LIMOURS MURDERS, N.-central France. Several barbarous murders, especially of aged people, took place here, Jan., Sept., Nov., 1873, and Jan. 1874; several persons denounced, proved innocence. In June, 1874, one Poirier confessed to similar murders at Nogent and other places, in Nov. 1873 and Jan. 1874. Executed at Chartres, 29 Sept. 1874.

LINCELLES (N. France), where the allied English and Dutch armies defeated the French, 18 Aug. 1793. General Lake commanded three battalions of foot guards.

LINCOLN, the Roman *Lindum Colonia*, and at the period of the conquest rich and populous. It was taken several times by Saxons and Danes. The castle was built by William I. in 1086. Without Newport-gate upon Lincoln plain was fought the battle between the partisans of the empress Maud, commanded by the earl of Gloucester, and the army of Stephen, in which the king was defeated and taken prisoner, 2 Feb. 1141. Louis, dauphin of France, invited over by the discontented barons in the last year of king John's reign, was acknowledged by them as king of England here; but the nobility, summoned by the earl of Pembroke to Gloucester to crown Henry III., marched against Louis and the barons, and defeated them in a most sanguinary fight (called the Fair of Lincoln), 20 May, 1217; and Louis withdrew. Theatre Royal burnt, 26 Nov. 1892. Population, 1881, 37,313; 1891, 41,491.

* By the treaty it was agreed that all arms, property and estates should be restored; all attainders annulled, and all outlawries reversed; and that no oath but that of allegiance should be required of high or low; the freedom of the Catholic religion was secured; relief from pecuniary claims incurred by hostilities was guaranteed; permission to leave the kingdom was extended to all who desired it; and a general pardon proclaimed to all then in arms. *Burns.* This treaty was annulled by the Irish parliament, 1695. Limerick is still called "the city of the broken treaty."

LINCOLN, BISHOPRIC OF. Sidnacester or Lindisse and Dorchester, two distinct sees in Mercia, were united about 1078, and the see was removed to Lincoln by bishop Remigius de Feschamp, who built a cathedral (1086), afterwards destroyed by fire, but rebuilt by bishop Alexander (1127) and bishop Hugh of Burgundy. The diocese is very large, although the dioceses of Ely (1109), Oxford, and Peterborough (1541) were formed from it, and were further enlarged in 1837. The see was valued at the dissolution of monasteries at 2065*l.* per annum; and after many of its manors had been seized upon, it was rated in the king's books at 894*l.* 10*s.* 1*d.* Present income, 4500*l.* It has given three saints to the church of Rome, and to the civil state of England six lord chancellors. The great bell of the cathedral, called *Great Tom of Lincoln*, weighs four tons eight pounds.

LINCOLN'S-INN (London), derives its name from Henry de Lacy, earl of Lincoln, who erected a mansion on this spot in the reign of Edward I., which had been the bishop of Chichester's palace. It became an inn of court, 1310. The gardens of Lincoln's-inn-fields were laid out by Inigo Jones, about 1620, and erroneously said to occupy the same space as the largest pyramid of Egypt, which is 764 feet square; Lincoln's-inn square being 821 feet by 625 feet 6 inches. William lord Russell was beheaded in Lincoln's-inn-fields, 21 July, 1683. The square (formed in 1618) was enclosed with iron railings about 1737. The new hall and other buildings were opened, 30 Oct. 1845, and the square planted. The *theatre* in Lincoln's-inn-fields was built in 1695; rebuilt in 1714; made a barrack in 1756, and pulled down in 1848. The fields (enclosed in 1735) opened to the public (cost 12,000*l.*) by sir John Hutton, L.C.C., 23 Feb. 1895.

LINCOLN TOWER, Westminster Bridge Road, was erected by the united subscriptions of Britons and Americans, as a memorial of the abolition of slavery, and of Abraham Lincoln, president. The foundation-stone was laid by general Schenk, then American minister here, 9 July, 1874; and the head stone was placed by the Rev. Newman Hall, minister of Surrey chapel, 28 Sept. 1875. The tower, which is 220 feet high, cost about 7000*l.* The church, named Christ church (to replace Surrey chapel), and schools adjoining (cost about 60,000*l.*), were dedicated, 4 July, *et seq.* 1876. The rev. Rowland Hill's body was removed from Surrey chapel and placed here, 14 April, 1881.

LINDISFARNE, or HOLY ISLAND, on the coast of Northumberland, became a bishop's see, 635. It was ravaged by the Danes under Regnar Lodbrok in 793, and the monastery destroyed by them in 875. The bones of the bishop, St. Cuthbert, who died in 687, were conveyed, among other places, to Chester-le-street, 883, and to Ripon, 995, and finally to Durham, *which see*.

LISLE (now Lille), N. France, has a strong citadel by Vauban. It was besieged by the duke of Marlborough and the allies; and, though deemed impregnable, was taken after a three months' siege in 1708. It was restored by the treaty of Utrecht, in 1713, in consideration of the demolition of the fortifications of Dunkirk. Lisle sustained a severe bombardment from the Austrians, who were obliged to raise the siege, 7 Oct. 1792. Population, 1886, 188,272; 1891, 200,935.

LISMORE (S. Ireland.) St. Carthagh, first bishop, 636, says: "Lismore is a famous and holy city, of which nearly one-half is an asylum where no woman dare enter." The castle (built by king John when earl of Moreton, 1185,) burnt in 1645, was rebuilt with great magnificence by the duke of Devonshire. The cathedral, built 636, was repaired by Cormac, son of Muretus, king of Munster, about 1130. The bishopric was united to that of Waterford, about 1363; and both to Cashel in 1839.

Here the king of Prussia vanquished Charles of Lorraine; 6000 Austrians were slain, 5 Dec. 1757. — LISSA, in Poland, was laid in ruins by the Russian army in the campaign of 1707.—LISSA, an island in the Adriatic. Near here the Italian fleet, commanded by Persano, was defeated with severe loss by the Austrian fleet, commanded by Tegethoff, 20 July, 1866.

The Italians had 23 vessels, 11 of which were ironclads, and the Austrians had 23 vessels, 7 only being ironclads.

Persano, when in sight of the enemy, quitted his ship, the *Rè d'Italia*, and hoisted his flag on the *Affondatore*. His ironclads did not keep well together.

During the action, the ironclad *Palestro* took fire and exploded, and all on board perished (except 19 out of 200 men), exclaiming, *Viva il Rè! Viva Italia!* The *Rè d'Italia* was surrounded and sunk by the Austrians. The *Rè di Portobello* disabled the Austrian line-of-battle ship *Kaiser*, and compelled her to run ashore. Both parties soon after retired from the conflict, which had lasted four hours.

LITANIES (Greek *litaneia*, supplication), were first used in processions, it is said, about 469; others say about 400. Litanies to the Virgin Mary were first introduced by pope Gregory I. about 595. The first English litany was commanded to be used in the Reformed churches by Henry VIII. in 1544.

LITERARY CLUB (at first called "The Club" and "Johnson's Club"), founded by Dr. Johnson and sir Joshua Reynolds, in 1764. Hawkins, Topham Beauclerk, Goldsmith, Burke, and Bennet Langton, were among the first members. The opinion formed of a new work by the club was speedily known all over London, and had great influence. The club still exists; many eminent men are members. Hallam, Macaulay, the marquis of Lansdowne, and bishop Blomfield were members; Dr. Milman, dean of St. Paul's, was in the chair at the centenary dinner, on 7 June, 1864.

LITHOFRACTEUR, or "STONE-BREAKER," an explosive material, a modification of dynamite (composed of gun-cotton, nitro-glycerine, with the constituents of gunpowder, and other substances), invented by professor Engels of Cologne, and made by Krebs, in 1869. It was occasionally used by the Germans in the war 1870-1, and was tried and well reported of for power and safety at Nant Mawy quarries, near Shrewsbury, 9, 10 May, 1871, and again on 20 Feb. 1872, before the government explosive committee, with similar results.

LITHOGRAPHY (drawing on stone). The invention is ascribed to Alois Senefelder, about 1796; and shortly afterwards the art was announced in Germany, and was known as polyautography. It became partially known in England in 1801, *et seq.*, but its general introduction is referred to Mr. Ackermann, of London, about 1817. Senefelder died in 1841. Improvements have been made by Engelmann and many others; see *Printing in Colours*.

LITHOSCOPE. An instrument for distinguishing precious stones, invented by sir David Brewster; described by him Jan. 1864.

LITHOTOMY. The surgical operation of cutting for the stone, it is said, was performed by Ammonius, about 240 B.C. The "small apparatus," so called from the few instruments used in the operation, was practised by Celsus, about A.D. 17. The "high apparatus" was practised (on a criminal at Paris) by Colot, 1475; by Franco, on a child, about 1566; and in England, by Dr. Douglass, about 1519. The "lateral operation," invented by Franco, much performed in Paris by Frère Jacques, in 1697, has been greatly improved. The "great apparatus" was invented by John de Romanis, and described by his pupil Marianus Sanctus, 1524.

* Floyer Sydenham, an eminent Greek scholar, of Wadham college, Oxford, and translator of some of the works of Plato, was arrested and thrown into prison for a trifling debt due for his frugal meals, and there, in 1788, died of a broken heart in want and misery, when nearly eighty years of age. The sympathy excited gave rise to this institution, since well supported. Williams was in early life a dissenting minister, and wrote on education. He was consulted by the early revolutionary party in France as to the form of a constitution for that country; he, Dr. Priestley, sir James Mackintosh, and other distinguished Englishmen, having been previously declared French citizens. He died 29 June, 1816

LITHOTRITY (or bruising the stone). The apparatus produced by M. Leroy d'Etiolles in 1822 has since been improved.

Prizes of 6000 and 10,000 francs were awarded M. Jean Civiale for his method of operation, 1827 & 1829.

LITHUANIA, formerly a grand-duchy, N. E. of Prussia. The natives (belonging to the Slavonic race) long maintained their independence against the Russians and Poles. In 1386, their grand-duke Jagellon became king of Poland and was baptized: Lithuania was not incorporated with Poland till 1501, when another duke Casimir, became king of that country. The countries were formally united in 1569. The larger part of Lithuania now belongs to Russia, the remainder to Prussia.

LITURGIES (from the Greek *leitos*, public, and *ergon*, work). The Greek and Roman liturgies are very ancient, having been committed to writing about the 4th and 5th centuries. The Romish church recognises four: the Roman or Gregorian, the Ambrosian, the Gallican, and the Spanish or Mosarabic. The Greek church has two principal liturgies: St. Chrysostom's and St. Basil's, and several smaller ones. Parts of these liturgies are attributed to the Apostles, to St. Ignatius, 250, to St. Ambrose (died 397), and to St. Jerome (died 420).

The present English Liturgy was first composed, and was approved and confirmed by parliament, in 1547-8. The offices for morning and evening prayer were then put into nearly the same form in which we now have them, and published 1549 and 1552.
At the solicitation of Calvin and others, the liturgy was reviewed and altered 1551
It was first read in Ireland, in the English language, in 1550, and in Scotland, where it occasioned a tumult, in 1637, and was withdrawn . 1638
The liturgy was revised by Whitehead, formerly chaplain to Anne Boleyn, and by bishops Parker, Grindall, Cox, and Pilkington, dean May, and secretary Smith.
John Knox is said to have used a liturgy for several years. The rev. Robert Lee, of Edinburgh, introduced a form of prayer in public worship, but gave it up when ordered to discontinue it in May, 1859; he soon after resumed it, and the discussion on the subject ceased only at his death, 14 March, 1868

See *Common Prayer*.

LIVERIES OF THE CITY OF LONDON. The term is derived from the custom of the retainers of the lord mayor and sheriffs wearing clothes of the form and colour displayed by those functionaries. Liveries were regulated by statute in 1392, and frequently since. The nobility gave liveries to their retainers. See *Companies*.

LIVERPOOL (W. Lancashire), is supposed to be noticed in Domesday-book under the name *Esmedune*, or *Smedune*.* Soon after the conquest, William granted that part of the country situated between the rivers Mersey and Ribble to Roger of Poitiers, who, according to Camden, built a castle here, about the year 1089. It afterwards was held by the earls of Chester and dukes of Lancaster. Liverpool is the second city of the Empire. LLOYD'S (London), at the Royal Exchange about 1692. A coffee-house, kept by Edwd. Lloyd, Abchurch-lane, became a place of meeting of merchants. After several removals it was established finally at the Royal Exchange in 1774, and remained there till the fire in 1838, when it was removed till the present building was completed in 1844. Here resort eminent merchants and shipowners, and here are effected insurances on ships and merchandise. A Register of ships began about 1764; and the terms A. 1, &c. were used about 1775. Two societies (underwriters and merchants) were united, and one register issued, Oct. 1834. Jubilee celebrated, 31 Oct. 1884. LODI (N. Italy). Napoleon Bonaparte, commanding the French army, totally defeated the Austrians, under Beaulieu, after a bloody engagement, at the bridge of Lodi, 10 May, 1796. The republican flag floated in Milan a few days after. Monument to Victor Emmanuel inaugurated, 16 Sept. 1883.

LOGARITHMS, the indexes of the ratio of numbers one to another, were invented by John Napier, baron of Merchiston, who published his canon, or table, in 1614. The invention was completed by Mr. Henry Briggs, at Oxford, who published tables, 1616-18. The method of computing by means of marked pieces of ivory was discovered about the same time, and hence called *Napier's bones*.

LOGIC, "the science of reasoning." Eminent works on it are by Aristotle; Bacon, Novum Organon; Locke on the Understanding; and the modern treatises on Logic, by archbishop Whately, sir William Hamilton, and Mr. John Stuart Mill.

Earl Stanhope's Demonstrator, or Logical Machine, invented in the latter part of the 18th century, was described by rev. Robert Harley to the British Association, 19 Aug. 1878.

In his "Principles of Science," 1874, Mr. Wm. Stanley Jevons describes his "Logical Abecedarium" and "Logical Slate."

LOG-LINE, used in navigation, about 1570; first mentioned by Bourne in 1577. It is divided into spaces of 50 feet, and the way which the ship makes is measured by a half-minute sand-glass, which bears nearly the same proportion to an hour that 50 feet bear to a mile: the line used in the royal navy is 48 feet.

LOGOGRAPH, apparatus invented by Mr. W. H. Barlow, about 1874, to give graphic representation of the vibratory motions of the air-waves of speech, somewhat resembling a telegraphic message.

LOGOGRAPHIC PRINTING, in which the commoner words were cast in one mass, was patented by Henry Johnson and Mr. John Walter of the *Times* in 1783. Anderson's "History of Commerce," vol. iv. was printed by these types in 1789.

LOGRONO, see *Najara*.

LOI DES SUSPECTS, enacted by the French convention, 17 Sept. 1793, during the reign of terror, filled the prisons of Paris. The Public Safety bill, of a similar character, was passed, 18 Feb. 1858, shortly after Orsini's attempt on the life of the emperor, Napoleon III.

LOLLARDS (by some derived from the German *lollen*, to sing in a low tone, by others derived from the English verb to loll or lounge) the name given to the first reformers of the Roman catholic religion in England, the followers of Wykliffe. The sect is also said to have been founded in 1315 by Walter Lollard, who was burnt for heresy at Cologne in 1322. The Lollards are said to have devoted themselves to acts of mercy. The first Lollard martyr in England was William Sawtree, parish priest of St. Osith, London, 12 Feb. 1401, when the Lollards were proscribed by parliament, and numbers of them were burnt alive. Sir John Cobham, lord Oldcastle, a follower of Wykliffe, was accused of treason and condemned, Sept. 1413. He escaped to Wales, where he was captured, and brought to London and burnt, 25 Dec. 1418. Lollards' tower, part of the bishop's prison, was near St. Paul's, not Lambeth palace. *Dr. Maitland.*

LOMBARDISTS, disciples of Peter Lombard, the schoolman, bishop of Paris, author of the "Book of Sentences," who died in 1164.

LOMBARD MERCHANTS, in England, were understood to be composed of natives of some one of the four republics of Genoa, Lucca, Florence, or Venice. *Anderson.* Lombard usurers were sent to England by pope Gregory IX. to lend money to convents, communities, and private persons who were not able to pay down the tenths which were collected throughout the kingdom with great rigour that year, 13 Hen. III. 1299. They had offices in the street named after them to this day. Their usurious transactions caused their expulsion from the kingdom in the reign of Elizabeth.

LOMBARDY (N. Italy) derived its name from the Longobardi, a German tribe from Brandenburg, said (doubtfully) to have been invited into Italy by Justinian to serve against the Goths. Their chief, Alboin, established a kingdom which lasted from 568 to 774. The last king, Desiderius, was dethroned by Charlemagne. (For a list of the Lombard kings, see *Italy*.) About the end of the 9th century the chief towns of Lombardy fortified themselves, and became republics. The first *Lombard league*, consisting of Milan, Venice, Pavia, Modena, &c., was formed to restrain the power of the German emperors, in 1167. On 29 May, 1176, they defeated the emperor Frederick Barbarossa at Legnano, and eventually compelled him to sign the peace of Constance in 1183. In 1226 another *league* was formed against Frederick II., which was also successful. After this, petty tyrants rose in most of the cities, and foreign influence quickly followed. The Guelf and Ghibelline factions greatly distracted Lombardy; and from the 15th century to the present time, it has been contended for by the German and French sovereigns. The house of Austria obtained it in 1748, and held it till 1797, when it was conquered by the French, who incorporated it with the Cisalpine republic, and in 1805 with the kingdom of Italy. On the breaking up of the French empire in 1815, the LOMBARDO-VENETIAN KINGDOM was established by the allied sovereigns and given to Austria, who had lost her Flemish possessions. Lombardy and Venice revolted, and joined the king of Sardinia in March, 1848; but they did not support him well, and were again subjected to Austria after his defeat at Novara, 23 March, 1849. An amnesty for political offences was granted in 1856. Great jealousy of Sardinia was felt by Austria after 1849. In 1857 diplomatic relations were suspended; and in April, 1859, war broke out; the Austrians crossing the Ticino and entering Piedmont. The French emperor declared war against Austria, and immediately sent troops into Italy. The Austrians were defeated at Montebello, 20 May; Palestro, 30, 31 May; Magenta, 4 June; and Solferino, 24 June. By the peace of Villafranca (11 July), the largest part of Lombardy was ceded to Louis Napoleon, who transferred it to the king of Sardinia. It now forms part of the new kingdom of Italy, to which Venetia was also surrendered by the treaty of Vienna, 3 Oct. 1867. Population 1890, 3,906,958.

LOMBOK, an island in the Indian Archipelago, subject to the Dutch since 1863. See *Holland*, 1894 *et seq*.

LONATO (Brescia, N. Italy). Here Napoleon Bonaparte defeated Wurmser and the Austrians, 3 Aug. 1796.

LONDON, the capital of the British empire. The earliest history is traditional. The Celtic name is said to have been Lyn-din, lake-fort; Tacitus in the first century, calls it Londinium; and describes it as a flourishing trading city; it was afterwards called Augusta, an appellation frequently given to great cities; several other forms of the name appear in documents, such as Lundenbyrig, Lundonia, and London-wic. In 1860, London and the suburbs were estimated to cover 121 square miles (11 miles each way, being three times as large as in 1800; in 1880, 122 square miles. London was constituted an "administrative" county by the local government act, 1888, including as rateable value seven-eighths of Middlesex, about two-thirds of Surrey, and nearly one-third of Kent. The population of the "city" in 1801, 156,859; in 1811, 120,909; in 1821, 125,434; in 1831, 125,574; in 1841, 125,008; in 1851, 122,440; in 1861, 112,063; in 1871, 74,897; in 1881, 50,652. Day census, 25-30 April, 261,061; 1891, 5 April, 37,694 (day census, 27 April, 301,384). For London and suburbs, 1801 *et seq*. see table in article *Population* (5 April, 1891, 4,231,431). *Inner London*, 4,392.346; *Outer Ring*, 1,656,209; total, 6,048,555, June, 1895. Census of metropolitan registration district, 4,411,271, 29 March, 1896. Revenue of corporation, 1862, 437,341*l*.; 1875, 655,391*l*.: expenditure, 592,244*l*.; in 1877, revenue 634,734*l*.: expenditure, 667,812*l*.; in 1892, revenue, 788,398*l*.; expenditure, 770,118*l*.; in 1893, revenue, 729,709*l*.; expenditure, 717,029*l*. The city is said to have expended 11,223,277*l*. in the last 50 years for the benefit of the metropolis (1895). Annual rateable value (metropolitan district), April, 1881, 27,405,488*l*.; the "city," 3,537,561*l*. Jan. 1888, 34,346,596*l*.; gross value, 43,961,653*l*.; rateable value, 36,437,810*l*., 31 March, 1898. Municipal debt of London (county), 37,941,704*l*., March, published Nov. 1896; total debt, 38,681,661*l*. for year ending March, 1897, announced 21 Dec. 1897. The "port" of London extends from London Bridge to the North Foreland. Tonnage entering and leaving the port, 1871, 7,600,000; 1885, 12,000,000 (dues paid over 41,000*l*.). The "city" returns 2 instead of 4 members to parliament by Act of 1885. "*London Statistics*," published by London County Council, 1893–94. See *Docks*, *Mayors*, *Metropolitan Board of Works*, *London County Council*, and *Treaties*.

The town appears to have prospered under British, Roman, and Saxon rules, and to have been much indebted to Alfred and his successors, but suffered greatly by the Danes; it was not attacked by William I., by whom the citizens were conciliated, and its corporate government was recognized by his son Henry I. The city received many favours from the Plantagenet kings, but frequently resisted their exactions. London is governed by the lord mayor, the court of aldermen, the common council, and other offices. London was not included in the municipal corporations Act, 1835. The London county council was constituted by the local government Act passed in 1888.

* This terrible pestilence broke out in India, and spreading itself westward through every country on the globe, reached England. Its ravages in London were so great, that the common cemeteries were not sufficient for the interment of the dead; and various pieces of ground without the walls were assigned for burial-places. Amongst these was the waste land now forming the precincts of the Charter-house, where upwards of 50,000 bodies were then deposited. This disorder did not subside till 1357. *Leigh.*

† This proclamation or decree was dated from Nonesuch, 7 July, 1580, and it was forbidden to erect new buildings where none had before existed in the memory of man. The extension of the metropolis was deemed calculated to encourage the increase of the plague; create a trouble in governing such multitudes; a dearth of victuals; multiplying of beggars, and inability to relieve them; an increase of artisans more than could live together; impoverishing other cities for lack of inhabitants. The decree stated that lack of air, lack of room to walk and shoot, &c., arose out of too crowded a city. A proclamation to the same effect was also issued by James I.

Thoms (in his "Human Longevity," May, 1873) and others, have disproved many alleged cases of longevity; and few statements of lives extending much beyond a century can be relied on. There were no records of baptism till the 16th century. In last decade about 800 alleged centenarians registered; 204 men. Deaths of 25 men and 66 women aged above 100 registered in 1881. LONGITUDE, determined by Hipparchus, at Nice, who fixed the first degree in the Canaries, c162 B.C. Harrison made a time-keeper, in A.D. 1759, which in two voyages was found to correct the longitude within the limits required by the act of parliament 12 Anne, 1714; and obtained the reward; see *Harrison's Timepiece*. The chronometers of Arnold, Earnshaw, and Bréguet, are highly esteemed. Chronometers are now received on trial at Greenwich Observatory. The act relating to the discovery of the longitude at sea was repealed in 1828. The Bureau des Longitudes at Paris was established in 1795.

LORDS.* The nobility of England date their creation from 1066, when William Fitz-Osborn is said to have been made earl of Hereford by William I.; and afterwards Walter d'Evreux, earl of Salisbury; Copsi, earl of Northumberland; Henry de Ferrers, earl of Derby; and Gherbod (a Fleming) earl of Chester. Twenty-two other peers were made in this sovereign's reign. The first peer created by patent was lord Beauchamp of Holt Castle, by Richard II. in 1387. In Scotland, Gilchrist was created earl of Angus by Malcolm III. 1037. In Ireland, sir John de Courcy was created baron of Kingsale, &c., in 1181; the first peer after the obtaining of that kingdom by Henry II.

LORDS, HOUSE OF. The peers of England were summoned *ad consulendum*, to consult, in early reigns, and by writ, 6 & 7 John, 1205; but the earliest writ extant is 49 Hen. III. 1265. The commons did not form a part of the great council of the nation until some ages after the conquest; see *Parliament*. The house of lords includes the spiritual as well as temporal peers of Great Britain. The bishops are supposed to hold certain ancient baronies under the king, in right whereof they have seats in this house. Some of the temporal lords sit by descent, and some by creation: others by election,

* Peers of England are free from all arrests of debts, as being the king's hereditary counsellors; therefore a peer cannot be outlawed in any civil action, and no attachment lies against his person; but execution may be taken upon his lands and goods. For the same reason, they are free from all attendance at courts leet or sheriffs' turns; or, in case of a riot, from attending the *posse comitatus*. He can act as a justice of the peace in any part of the kingdom. See *Baron*, *Earl*, &c.

since the union with Scotland in 1707, and with Ireland, 1801. In 1719, with the king's consent, a bill for limiting the power of the sovereign of creating peers, was introduced into the lords and twice passed, but twice rejected by the commons.—Scotland elects 16 representative peers, and Ireland, 28 temporal peers for life. The house of lords in Jan. 1898, consisted of 6 princes of the blood, 2 archbishops, 22 dukes, 22 marquises, 141 earls, 35 viscounts, 337 barons, and 24 bishops; in all, 589. The valuable "Constitutional History of House of Lords," by L. O. Pike, was published in 1894. Sir Wm. LORETTO, near Ancona, Italy. Here is the *Casa Santa*, or Holy House, in which it is pretended the Virgin Mary lived at Nazareth, and said to have been carried by angels into Dalmatia from Galilee in 1291, and brought here a few years after. The lady of Loretto, gaudily dressed, stands upon an altar holding the infant Jesus in her arms, surrounded with gold lamps. LORRAINE (Lotharingia), formerly a French now a German province, became a kingdom under Lothaire (son of the emperor Lothaire I.) about 855; and was divided at his death, in 869, part of it being made a duchy. From the first hereditary duke, Gerard, nominated by the emperor Henry III. in 1048, descended the house of Lorraine, represented now by the emperor of Austria, whose ancestor, the empress Maria Theresa, married in 1736 Francis formerly duke of Lorraine, then of Tuscany. Lorraine, given to the dethroned king of Poland, Stanislaus I., for life, was, at his death in 1766, united to France; see *Nancy*. Lorraine was the seat of war in Aug. 1870, and about the fifth part, including Metz and Thionville, was annexed to Germany at the peace, 26 Feb. 1871.

LOTS. Casting lots, as an appeal to God, was sacred among the Jews, *Proverbs* xvi. 33. It was employed in the division of the land of Canaan, about 1444 B.C., by Joshua (xiv.), and in the election of Matthias the apostle, A.D. 33, *Acts* i.—Lots for life or death have been frequently cast. For an instance, see *Wales*, 1649, note.

LOTTERIES are said to have originated in Florence about 1530, and to have been legalised in France in 1539, and soon became common. They were prohibited by pope Benedict XIII. (1724-30), and sanctioned by Clement XII. (1730-40). See *Art Union* under *Arts* and *Paris* (exhibition 1889).

Missing Word Competition. In 1892, some weekly periodicals occasionally printed a sentence in which one word was omitted, and offered a money prize to the person who correctly supplied the deficiency; 1*s.* coupons being issued. This was condemned by sir John Bridge at Bow-street as a species of lottery, and several persons were fined. This sentence was confirmed by Mr. Justice Stirling in the Chancery division, in the case of Barclay and others *v.* Pearson (in relation to *Pearson's Weekly*), and he decided that the 23,628*l.* which had been paid into court, should be returned to Mr. Pearson, to be distributed by him to the claimants, to whom the court could give no help, as the affair was illegal, 9 Feb. 1893. LOUVRE, in Paris, is said to have been a royal residence in the reign of Dagobert, 628. It was a prison-tower constructed by Philippe Augustus in 1204. It afterwards became a library, and Charles VI. made it his palace (about 1364). The new buildings, begun by Francis I. in 1528, were enlarged and adorned by successive kings, particularly Louis XIV.—Napoleon I. turned it into a museum, and deposited in it the finest collection of paintings, statues, and treasures of art known in the world. The chief of those brought from Italy have since been restored to the rightful possessors. The magnificent buildings of the new Louvre, begun by Napoleon I. and completed by Napoleon III., were inaugurated by the latter in great state, 14 Aug. 1857. The library was destroyed and other buildings much injured by the communists, May, 1871.

LÜBECK, a city in N. Germany, one of the four republics of the German confederation, was built in the 12th century, and was chief founder of the Hanseatic league about 1240, which lasted till 1630. Lübeck was declared a free imperial city about 1226; but was frequently attacked by the Danes. The French took it by assault, 6 Nov. 1806, and Napoleon incorporated it with his empire in 1810. On his fall in 1814 it became once more a free imperial city. It joined the North German confederation 18 Aug. 1866. Population in 1871, 52,158; in 1880, 63,571; in 1885, 67,658; 1890, 76,485.

LUCCA (central Italy), a Roman colony, 177 B.C.; a Lombard duchy, A.D. 1327; a free city about 1370; took an active part in the civil wars of the Italian republics. It was united with Tuscany, and given as a principality to Eliza Bonaparte by her brother Napoleon I., 1805. Lucca, as a duchy, was given to Maria Louisa, widow of Louis, king of Etruria, in 1814. It was exchanged by her son Charles-Louis for Parma and Placentia in 1847; was annexed to Tuscany, and with it became part of the kingdom of Italy, in 1860.

LUCERNE (Switzerland) became independent in 1332, and joined the confederation. The city Lucerne is said to derive its name from a light (*lucerna*) set up to guide travellers. It dates from the 8th century, and was subject to the abbots of Murbach, who surrendered it to the house of Hapsburg. It was taken by the French in March, 1798, and was for a short time capital of the Helvetic republic; which, as the focus of insurrection against the French, was suppressed Oct. 1802. As a catholic canton, Lucerne was very active on behalf of education by the Jesuits, 1844; see *Switzerland*. Population, 1888: canton, 135,360; city, 20,314.

LUCIA, ST. (West Indies), first settled by the English, 1639; expelled by the natives; settled by French in 1650; taken by the British several times in the subsequent wars. Population in 1871, 31,811: 710 whites. In 1880, 38,265; 1891, 41,713; see *Windward Isles*.

LUCIFER MATCHES came into use about 1834. Friction matches were invented by Walker of Stockton-on-Tees, 1829. In March, 1842, Mr. Reuben Partridge patented machinery for manufacturing the splints. In 1845, Schrötter of Vienna produced his amorphous phosphorus (by heating ordinary phosphorus in a gas which it cannot absorb), by the use of which lucifers are rendered less dangerous, and the manufacture less unhealthy. *Phosphoros* (Greek) and *lucifer* (Latin), both signify *light-bearer*.

Mr. Lowe's proposed tax on lucifers (with "*ex luce lucellum*" on the box) was much opposed, and withdrawn, April, 1871. For their exertions, a drinking fountain at Bow was inaugurated as a memorial to Bryant and May, 5 Oct. 1872. The match manufacture was made a monopoly in France in Oct. 1872, for 750,000*l*.

TREATMENT OF THE INSANE.

Till the end of the last century lunatics were treated with cruel severity; see Conolly "On the Treatment of the Insane," 1856.
The insane were exhibited at Bethlem as a show, for 1*d.* or 2*d.* till 1770
Enlightened principles of treatment were introduced by Wm. Tuke, at the Society of Friends' "Retreat," at York, and by Pinel, at the Bicêtre, Paris, with very great success 1792
Esquirol succeeds Pinel, and strongly recommends instruction in the management of mental disorders 1810
Exposure of enormous cruelties in the Bethlem hospital 1815
This led to gradual improvements, and at last to the total abolition of mechanical restraints at Lincoln, 1837; and at Hanwell Asylum (under the superintendence of Dr. John Conolly) and at other places 1839

LYDIA, or Mæonia, an ancient kingdom in Asia Minor; the early history wholly mythical. Of a long dynasty of kings, the last was Crœsus, "the richest of mankind." LYMPHATICS (absorbent vessels connected with digestion), discovered about 1650 by Rudbek in Sweden, Bartholin in Denmark, and Jolyffe in England. Asellius discovered the lacteals in 1622. In 1654, Glisson ascribed to these vessels the function of absorption; and their properties were studied by Wm. and John Hunter, Monro, Hewson, and other great anatomists.

LYNCH LAW, punishment inflicted by private individuals, independently of the legal authori-

ties. The origin of the term is doubtful; the practice has been attributed to James Lynch Fitz-Stephen, warden of Galway, about 1526, to Lynch, a farmer in Virginia, and to Lynch, a person sent to America to suppress piracy, 1687-8. "Judge Lynch" is thought by some to be a mythical person. This mode of administering justice still exists in the outlying districts of the United States. Four robbers were taken from prison and hanged by a vigilance committee at New Albany, on the Ohio, 11 Dec. 1868.

LYRE. Its invention is ascribed to the Grecian Hermes (in Latin Mercury), who, according to Homer, gave it to Apollo, the first that played upon it with method, and accompanied it with poetry. The invention of the primitive lyre, with three strings, is ascribed to the first Egyptian Hermes. It is said that Terpander added several strings to the lyre, making the number seven, 673 B.C., and that Phrynis, a musician of Mitylene, added two more, making nine, 438 B.C.

MACADAMISING, a system of road-making invented by Mr. John Macadam, and published by him in an essay, in 1819, having practised it in Ayrshire. He prescribed stones to be broken to six ounces weight, and the use of clean flints and granite clippings. He received 10,000*l.* from parliament; was appointed surveyor-general of the metropolitan roads in 1827, and died in 1836; see *Roads*.

MACAO (in Quang-tong, S. China) was given to the Portuguese as a commercial station in 1586 (in return for their assistance against pirates), subject to an annual tribute, which was remitted in 1886. Here Camoens composed part of the "Lusiad." The abuses of the Coolie trade by the Portuguese led to its abolition here by the British and Chinese governments in 1873. Outbreak of plague reported, 23 April, 1895.

MACARONI. This name, given to a poem by Theophilus Folengo, 1509, continues to designate trifling performances, as buffoonery, puns, anagrams, "wit without wisdom, and humour without sense." His poem was so called from a nutritious preparation of wheat-flour in tubes and threads. These poems, in Italy and France, gave rise to *Macaroni academies*, and in England to *Macaroni clubs* (about 1772), when everything ridiculous in dress and manners was called "Macaroni." William's macaroni manufactory in London, only one in England, Dec. 1897.

MACCABEES, a name of the Asmonæans, who commenced their career during the persecution of Antiochus Epiphanes, 167 B.C. Mattathias, a priest, resisted the tyranny; and his son, Judas Maccabæus, defeated the Syrians in three battles, 166, 165 B.C.; but fell in an ambush, 161 B.C. His brother Jonathan made a league with the Romans and Lacedæmonians, and after an able administration was treacherously killed at Ptolemais by Tryphon, 143 B.C. His brother and successor, Simon, was also murdered, 135 B.C. John Hyrcanus, son of Simon, succeeded. His son Judas, called also Aristobulus, took the title of king, 107 B.C. The history of the Maccabees is contained in five books of that name, two of which are included in our Apocrypha. Four are accounted canonical by the Roman Catholic church; none by Protestant communions.

MACDONALD AFFAIR, see *Prussia*, 1861.

MACE, a weapon anciently used by the cavalry of most nations, was originally a spiked club, hung at the saddle-bow, and usually of metal. Maces were also early ensigns of authority borne before officers of state, the top being made in the form of an open crown, and commonly of silver gilt. The lord chancellor and speaker of the house of commons have maces borne before them. Edward III. granted to London the privilege of having gold or silver maces carried before the lord mayor, sheriffs, aldermen, and corporation, 1354. It was with the mace usually carried before the lord mayor on state occasions, that Walworth, lord mayor of London, is said to have knocked the rebel Wat Tyler off his horse, for rudely approaching Richard II., a courtier afterwards despatching him with his dagger, 15 June, 1381. Cromwell, entering the house of commons to disperse its members and dissolve the parliament, ordered one of his soldiers to "take away that bauble," the mace, which was done, and the doors of the house locked, 20 April, 1653.

MACHIAVELLIAN PRINCIPLES, those of Nicolo Machiavelli of Florence (born 1469, died 1527), in his "Practice of Politics" and "The Prince." By some they are styled "the most pernicious maxims of government, founded on the vilest policy;" by others as "sound doctrines, notwithstanding the prejudice erroneously raised against them." The author said that if he taught princes to be tyrants, he also taught the people to destroy tyrants. "The Prince" appeared at Rome in 1532, and was translated into English in 1761.

MADEIRA, an island, N. W. coast of Africa, discovered, it is said, in 1344, by Mr. Macham, an English gentleman, or mariner, who fled from France for an illicit amour. He was driven here by a storm, and his mistress, a French lady, dying, he made a canoe, and carried the news of his discovery to Pedro, king of Aragon, which occasioned the report that the island was discovered by a Portuguese, 1345. It is asserted that the Portuguese did not visit this island until 1419 or 1420, or colonise it until 1431. It was taken by the British in July, 1801; and again by admiral Hood and general Beresford, 24 Dec. 1807, and retained in trust for the royal family of Portugal, who had emigrated to the Brazils. It was restored to the Portuguese in 1814. Since 1852 the renowned vintages here have been almost totally ruined by the vine disease (oïdium). Population, 1882, 133,955.

MADRIGAL, an unaccompanied song for three or more voices, of which fine examples are by English composers. Madrigals, invented in the Netherlands, were adopted in Italy, where fine specimens were produced. Many were published by Morley, 1594; Weelkes, 1597; Wilbye, 1598; and Bennet, 1599. The Madrigal Society in London began in 1741. English Glee and Madrigal Union founded in 1851. Rimbault's "Bibliotheca Madrigalium" published 1847. The madrigal, "Summer is i cumen in" is attributed to the 13th or 14th century.

MAESTRICHT (Holland), the ancient *Trajectum ad Mosam*, the capital of Limburg. It revolted from Spain, and was taken by the prince of Parma in 1579, when a dreadful massacre took place. In 1632, the prince of Orange reduced it after a memorable siege, and it was confirmed to the Dutch in 1648; Louis XIV. took it in 1673; William, prince of Orange, invested it in vain in 1676; but in 1678 it was restored to the Dutch. In 1748 it was besieged by the French, who were permitted to take possession of the city on condition of its being restored at the peace then negotiating. In Feb. 1793, Maestricht was unsuccessfully attacked by the French, but they became masters of it, Nov. 1794. In 1814 it was made part of the kingdom of the Netherlands, and now belongs to Holland. Population, 1891, 32,225.

MAGDALA, a very strong place in Abyssinia (*which see*). On Good Friday, 10 April, 1868, the troops of the emperor Theodore attacked the first brigade of the British army under sir Robert Napier, and were repulsed with great slaughter. On the next day all the European prisoners were given up, but Theodore himself refused to surrender; and on Easter Monday, 13 April, Magdala was stormed, and Theodore himself killed—it is said by his own hand.—British loss, 2 killed; 20 wounded: Abyssinian loss, about 500 killed and wounded out of about 5000. Magdala was burnt to the ground by the British, 17 April, 1868.

MAGDALENS AND MAGDALENETTES, communities of nuns, consisting chiefly of penitent courtesans. The order of penitents of St. Magdalen was founded 1272, at Marseilles. The convent of Naples was endowed by queen Sancha, 1324. That at Metz was instituted in 1452. At Paris, 1492. The Magdalen at Rome was endowed by pope Leo X., in 1515, and favoured by Clement VIII. in 1594. The Magdalen hospital, London, was founded in 1758, under the direction of Dr. Dodd. The asylum in Dublin was opened in June, 1766.

MAGDEBURG (Prussia). The archbishopric was founded about 967. The city suffered much during the religious wars in Germany. It was besieged and taken by the elector Maurice, Nov. 1550, and Nov. 1551; blockaded for seven months by the imperialists, under Wallenstein, in 1629; and barbarously sacked by Tilly on 10 May, 1631. It was given to Brandenburg in 1648; was taken by the French, 8 Nov. 1806; annexed to the kingdom of Westphalia, 9 July, 1807; restored to Prussia, May, 1813. Valuable fine art collection burnt 6 April, 1891. Population, 1890, 202,325.

The *Magdeburg Experiment* is shown by means of a hollow sphere, composed of two hemispheres, fitting air-tight. When the air is exhausted by the air-pump, the hemispheres are held together by the pressure of the atmosphere, and require great force to separate them. The apparatus was suggested by Otto von Guericke, the inventor of the air-pump. He died in 1686. *Brande.*

MAGELLAN, STRAITS OF (connecting the Atlantic and Pacific oceans), was passed by Fernando de Magelhaéns (Magellan), a Portuguese, on 27 Nov. 1520. He gave the latter ocean its name on account of its calmness. Magellan completed the first voyage round the world, with a fleet of discovery fitted out by the emperor Charles V., but was killed in 1521. The Spaniards had a fort here, called Cape Famine, because the garrison perished from want.

MAGENTA, a small town in Lombardy, near which the French and Sardinians defeated the Austrians, 4 June, 1859. The emperor Louis Napoleon commanded, and he and the king of Sardinia were in the thickest of the fight. It is said that 55,000 French and Sardinians, and 75,000 Austrians were engaged. The former are asserted to have lost 4000 killed and wounded, and the Austrians 10,000, besides 7000 prisoners. The French generals Espinasse and Clerc were killed. The arrival of general MacMahon during a deadly struggle between the Austrians and the French, greatly contributed to the victory. The contest near the bridge of Buffalora was very severe. The Austrians fought well, but were badly commanded. The emperor and king entered Milan on 8 June following; MacMahon and Regnault d'Angely were created marshals of France. A monument erected here in memory of the slain was solemnly inaugurated 4 June, 1872.—The red dye, rosaniline, obtained by chemists from gas-tar, is termed *magenta;* see *Aniline.*

MAGI, an order of priests and teachers among the ancient Medes and Persians, with much political power. One of them who on the death of Cambyses asserted that he was Smerdis, a son of Cyrus, and claimed the throne of Persia, was deposed by Darius Hystaspes, 521 B.C., and a massacre of the Magi followed. They retained their religious position till the later Roman empire. The constitution of the order is traditionally assigned to Zoroaster, the Zarathustra of the Zendavesta, whose time and very existence are uncertain, the 6th century B.C. being mentioned. He is said to have taught the knowledge of Ormuzt, the supreme good principle, to the Magi, whom he classified as learners, masters, and perfect scholars, the possessors of all spiritual power, and the science of the age, see *Parsees.* The name Magi has been applied to the "wise men" of *Matt. ii.*, and the Parsees at Bombay are descendants of the Guebres or fire-worshippers.

MAGIC, see *Alchemy, Witchcraft,* &c. The invention of the MAGIC LANTERN is ascribed to Roger Bacon, about 1260, but more correctly to Athanasius Kircher, who died 1680. Sir David Salomons, in a discourse at the Royal Institution on "Optical Projection," exhibited an arrangement of the magic lantern, in which by the use of lenses magnifying up to 4,500 diameters, he stated that he was enabled to magnify a postage stamp to the size of 2½ acres, 26 Feb. 1892. See Godwin's "Lives of the Necromancers," 1834, and Ennemoser's "History of Magic," translated by W. Howitt, 1854.

MAGISTRATES, see *Justices.* Stipendiary borough magistrates may be appointed by 5 & 6 Will. IV. c. 76, 1835; and by 26 & 27 Vict. c. 97, 1863. The present arrangement of metropolitan magistrates (the chief sitting at Bow-street) was made by acts of parliament in 1792 and 1839. Eleven courts were appointed in 1840. Their salaries raised from 25 March, 1875. Henry Fielding, the novelist, was acting magistrate for Westminster and at Bow-street. He was succeeded by his half-brother, sir John Fielding, in 1761; by

MAGNA CHARTA. Its fundamental parts were derived from Saxon charters, continued by Henry I. and his successors. On 20 Nov. 1214, the archbishop of Canterbury and the barons met at St. Edmondsbury. On 6 Jan. 1215, they presented their demands to king John, who deferred his answer. On 19 May they were censured by the pope. On 24 May they marched to London, and the king was compelled to yield. The charter was sealed by John at Runnymede, near Windsor, 15 June, 1215. It was many times confirmed, by Henry III. and his successors. This last king's grand charter was granted in 1224, and was assured by Edward I.; see *Forests.* The original MS. charter is lost. The finest MS. copy, which is at Lincoln, was reproduced by photographs in the "National MSS." published by government, 1865.

MAGNA GRÆCIA, the independent states founded by Greek colonists in South Italy, Sicily, &c. Cumæ, in Campania, is said to have been founded in 1034 B.C., Pandosia and Metapontum in 774 B.C. These states were ruined through siding with Hannibal when he invaded Italy, 216 B.C.

MAGNESIA (Asia Minor). Here Antiochus the great, king of Syria, was defeated by the Scipios, 190 B.C.—*Magnesia alba,* the white alkaline earth used in medicine, was in use in the beginning of the 18th century. Its properties were developed by Dr. Black in 1755.

MAGNESIUM, a metal first obtained from magnesia by sir Humphry Davy in 1808, and since produced in larger quantities by Bussy, Deville, and especially by Mr. E. Sonstadt, in 1862-4. Its light when burnt is very brilliant, and is so rich in chemical rays that it may be used in photography. Lamps made for burning magnesium wire, were employed by the excavators of the tunnel through Mount Cenis. By its light photographs of the interior of the Pyramids were taken in 1865. Larkin's magnesium lamp (in which the metal is burnt in the form of a powder) was exhibited at the Royal

Institution on 1 June, 1866, and before the British Association at Nottingham in Aug. 1866.

MAGNETISM. The attractive power of the loadstone or magnet was early known, and is referred to by Homer, Aristotle, and Pliny; it was also known to the Chinese and Arabians. The Greeks are said to have obtained the loadstone from Magnesia in Asia, 1000 B.C. Roger Bacon is said to have been acquainted with its property of pointing to the north (1294). The invention of the mariner's compass is ascribed to Flavio Gioia, a Neapolitan, about 1310; but it was known in Norway previous to 1266; and is mentioned in a French poem, 1150. See under *Electricity*.

In the Royal Institution, London, is a magnet by Logeman, of Haarlem, constructed on the principles of Dr. Elias, which weighs 100 lb, and can sustain 430 lb. Thomson's mariner's compass produced, 1872

MALTA (formerly Melita), an island in the Mediterranean, held successively by the Phœnicians, Carthaginians, and Romans, which last conquered it, 259 B.C. The apostle Paul was wrecked here, A.D. 62. (*Acts* xxvii., xxviii.) Malta was taken by the Vandals, 534; by the Arabs, 870; and by the Normans from Sicily, 1090. With Sicily it became successively part of the possessions of the houses of Hohenstaufen, of Anjou (1266), and of Aragon (1260). In 1530 Charles V. gave it to the Knights Hospitallers, who defended it most courageously and successfully, in 1551 and 1565, against the Turks, who were obliged to abandon the enterprise after the loss of 30,000 men. The island was taken by Bonaparte in the outset of his expedition to Egypt, 12 June, 1798. He found in it 1200 pieces of cannon, 200,000 lbs. of powder, two ships of the line, a frigate, four galleys, and 40,000 muskets, besides an immense treasure collected by superstition; and 4500 Turkish prisoners, whom he set at liberty. Malta surrendered to the British under Pigot, 5 Sept. 1800. At the peace of Amiens it was stipulated that it should be restored to the knights. The British, however, retained possession, and the war recommenced between the two nations; but by the treaty of Paris, in 1814, the island was guaranteed to Great Britain. A legislative constitution was established in 1849; and after various changes was replaced by a more popular one proclaimed 22 Dec. 1887. *La Valetta*, the capital, was founded in 1557 by the grand master La Valetta, and completed and occupied by the knights, 18 Aug. 1571. The Protestant college was founded in 1846. A grand new naval dry dock was opened, May, 1871. Governor of Malta and Gozo, sir Patrick Grant, March, 1867; sir C. T. MALTA, KNIGHTS OF. A military religious order, called also Hospitallers of St. John of Jerusalem, Knights of St. John, and Knights of Rhodes. Some merchants of Malfi, trading to the Levant, obtained leave of the caliph of Egypt to build a house for those who came on pilgrimage to Jerusalem, and whom they received with zeal and charity, 1048. They afterwards founded a hospital for the reception of pilgrims, from whence they were called Hospitallers (Latin, *hospes*, a guest). The military order was founded about 1099; confirmed by the pope, 1113. In 1119 the knights defeated the Turks at Antioch. After the Christians had lost their interest in the East, and Jerusalem was taken, the knights retired to Acre, which they defended valiantly in 1290. John, king of Cyprus, gave them Limisso in his dominions, where they stayed till 1310, in which year they took Rhodes, under their grand master De Vallaret, and the next year defended it under the duke of Savoy against an army of Saracens. The story that his successors have used F. E. R. T. (*Fortitudo ejus Rhodum tenuit*, or his valour kept Rhodes) for their device is much doubted. From this they were also called *knights of Rhodes;* but Rhodes being taken by Solyman in 1522, they retired into Candia, thence into Sicily. Pope Adrian VI. granted them the city of Viterbo for their retreat; and in 1530 the emperor Charles V. gave them the isle of Malta. The order was suppressed in England in 1540; restored in 1557; and again suppressed in 1559. St. John's Gate, Clerkenwell, a relic of their possessions, still exists. The emperor Paul of Russia declared himself grand master of the order in June, 1799. After the death of the grand master, Tommasi di Contara, in 1805, the order was governed by a lieutenant and a college at Rome, till Pope Leo XIII. made count Ceschi à Santa Cisce (lieutenant since 14 Feb. 1871) grand master, 28 March, 1879. The knights sent a hospital establishment into Bohemia during the war in 1866, which afforded great relief to the wounded and sick.

MAMELON, a hill, one of the defences of Sebastopol, was captured by the French, 7 June, 1855.

MAMELUKES, originally Turkish and Circassian slaves, established by the sultan of Egypt as a body-guard, about 1260. They advanced one of their own corps to the throne of Egypt, May, 1260, and continued to do so until it became a Turkish province, in 1517, when the beys took them into pay, and filled up their ranks with renegades from various countries. On the conquest of Egypt by Bonaparte, in 1798, they retreated into Nubia; but, assisted by the Arnauts, reconquered Egypt from the Turkish government. In 1804, Napoleon embodied some of them in his guard. On 1 March, 1811, they were decoyed into the power of the Turkish pacha, Mehemet Ali, and slain at Cairo.

MAMERTINI, sons of Mamers or Mars, were Campanian soldiers of Agathocles. They seized Messina in Sicily, in 281, B.C., and when closely besieged by the Carthaginians, and Hiero of Syracuse, in 264, they implored the help of the Romans, which led to the first Punic war.

MAMMOTH, an extinct species of elephant. An entire mammoth, flesh and bones, was discovered in Siberia, in 1799. Remains of this animal have since been found at Harwich, in 1803, and at places in Europe, Asia, and America. Mammoth is also termed Mastodon.

MAN, ANTIQUITY OF. In 1836, M. Boucher de Perthes found some rude flint implements, which he believed to be of human manufacture, mingled with bones of extinct animals, in the old alluvium near Abbeville in Picardy, France, and also in 1847, near Amiens. Similar flints have since been found in Sicily by Dr. Falconer, at Brixham by Mr. Pengelly, and lately in various parts of the world. Hence many geologists infer that man existed on the earth many ages earlier than has been hitherto believed.

Some burnt bricks found in the Nile are considered to be 20,000 years old, and some bones found in lacustrine deposits in Florida, 30,000 years old.

The skeleton of a man supposed to have been a contemporary of the mammoth and cave-bear was found with polished flint implements by M. Rivière in the Cavillin cavern, near Mentone, 26 March, 1872. Mr. W. Pengelly went to examine these remains.

MAN, ISLE OF, was subdued by Edwin, king of Northumberland, about 620; by Magnus of Norway, 1098; by the Scots, 1266; occupied by Edward at the wish of the inhabitants 1290; recovered by the Scots in 1313; but taken from them by Montacute, afterwards earl of Salisbury, to whom Edward III. gave the title of king of Man, in 1343. It was afterwards subjected to the earl of Northumberland, on whose attainder Henry IV. granted it in fee to sir John Stanley, 1406. It was taken from this family by Elizabeth, but was restored in 1610 to the earl of Derby, through whom it fell by inheritance to the duke of Athol, 1735. He received 70,000*l.* from parliament for all his rights in 1765; and the nation was charged with the further sum of 132,944*l.* for the purchase of his remaining interest in the revenues of the island in Jan. 1829. The countess of Derby held the isle against the parliament forces for a time in 1651. The new queen's landing pier (cost 46,400*l.*) inaugurated by the lieut. governor, H. B. Loch, 1 July, 1872. Some assert that St. Patrick was the founder of the see, and that Germanus was the first bishop, about 447. It was united to Sodor in 1113. The bishop has no seat in the house of lords; but lord Auckland (bishop, 1847-54) sat by right of his barony. Present income, 2000*l.*

The Tynwald an independent legislative body, consists of two branches, 1. The governor and council; 2. The house of Keys; their acts receiving the royal assent. MANASSAS JUNCTION (Virginia, United States), an important military position, where the Alexandria and Manassas Gap railways meet, near a creek named BULL RUN. 1. It was held by the confederates in 1861, when they were attacked by the federal general Irwin McDowell. He began his march from Washington on 16 July, and gained some advantage on the 18th at Centreville. On the 21st was fought the *first* battle of Bull Run. The federals, who began the fight, had the advantage till about three o'clock p.m., when the confederate general Johnston brought up reinforcements, which at first the federals took for their own troops. After a brief resistance, the latter were seized with sudden panic, and, in spite of the utmost efforts of their officers, fled, abandoning a large quantity of arms, ammunition, and baggage. The confederate generals Johnston and Beauregard did not think it prudent to pursue the fugitives, who did not halt till they arrived at Washington. The federal army is said to have had 481 killed, 1011 wounded, 1216 missing. The loss of the confederates was stated to be about 1500.—In March, 1862, when the army of the Potomac, under general McClellan, marched into Virginia, they found that the confederates had quietly retreated from the camp at Manassas. 2. On 30 Aug. 1862, this place was the site of another great battle between the northern and southern armies. In August, general "Stonewall" Jackson, after compelling the federal general Pope to retreat, defeated him at Cedar mountain on the 9th, turned his flank on the 22nd, and arriving at Manassas repulsed his attacks on the 29th. On the 30th general R. E. Lee (who had defeated general McClellan and the invading northern army before Richmond, 26 June to 1 July) joined Jackson with his army, and Pope received reinforcements from Washington. A desperate conflict ensued, which ended in the confederates gaining a decisive victory, compelling the federals to a hasty retreat to Centreville, where they were once more routed, 1 Sept. The remains of their army took refuge behind the lines of Washington on 2 Sept. Pope was at once superseded, and McClellan resumed the command to march against the confederates, who had crossed the Potomac and entered Maryland; see *United States.*

MANCHESTER (Lancashire), in the time of the Druids, was one of their most principal stations, and had the privilege of sanctuary attached to its altar, in the British language *Meyne*, a stone. It was one of the seats of the Brigantes, who had a castle, or stronghold, called *Mancenion*, or the place of tents, near the confluence of the rivers Medlock and Irwell. The site of this, still called the "Castle Field," was, about 79, selected by the Romans as the station of the *Cohors Prima Frisiorum*, and called by them *Mancunium;* hence its Saxon name *Manceastre*, from which its modern appellation is derived. *Lewis.* Manchester constituted a harbour and port, 22 Dec. 1893. MANGANESE. Black oxide of manganese, long used to decolorise glass, and called *Magnesia nigra*, was formerly included among the ores of iron. Its distinctive character was proved by the researches of Pott (1740), Kaim and Winterl (1770), and Scheele and Bergmann (1774); it was first eliminated by Gahn. Manganese combined with potassium is called mineral chameleon, from its rapid change of colour under certain circumstances. Forchammer employed it as a test for the presence of organic matter in water; and Dr. Angus Smith, successfully applied this test to air in 1858. The oxide is the important ingredient in Condy's "disinfecting fluid." Manganese bronze, a new metal produced by Mr. P. M. Parsons, inventor of white brass, 1876. Manganese steel produced by Messrs. Pfeil & Co. 1887.

MANICA, a territory in S. Africa in Mashonaland, near Mozambique, which on account of its mines, the Portuguese vainly endeavoured to acquire in the 16th century. See *Zambesi*.

The territory was acknowledged to be under the influence of Portugal by the convention of Aug. 1890.
Dispute with Great Britain; delimitation referred to arbitration of Italy, March, 1894; boundary settled, 30 Jan. 1897.

MANICHEANS, a sect founded by Manes, in Persia, about 261. It spread into Egypt, Arabia, and Africa. A rich widow, whose servant Manes had been, left him much wealth, after which he assumed the title of Apostle, or envoy of Jesus Christ, and announced that he was the paraclete or comforter that Christ had promised to send. He maintained two principles, the one good he called light, the other bad he called darkness. He rejected the Old Testament, and composed a system of doctrine from Christianity and the dogmas of the ancient fire-worshippers. Sapor, king of Persia, believed in him at one time; but afterwards banished him. He was burnt alive by Bahram or Varanes, king of Persia, in 277. His followers dispersed, and several sects sprang from them.

MANILLA (or Manila) (built about 1573), capital of the Philippine isles, a great mart of Spanish commerce. Manilla was taken by the English, 6 Oct. 1762, when the archbishop engaged to ransom it for about a million sterling; never wholly paid. Manilla has suffered greatly by earthquakes. It is stated that nearly 3000 persons perished by one in 1645. In Sept. 1852, the city was nearly destroyed, and on 3 July, 1863, about a thousand lives were lost. The duke of Edinburgh was hospitably entertained here, 19 Nov. 1869. See *Earthquakes* 1852, 1863, 1880. Destructive typhoon, 20, 21 Oct. 1882. Great fire; 4,000 houses burnt, many deaths, 1 April, 1893. Great fire, 30,000 persons homeless, reported 5 April, 1896; another, public buildings destroyed, several deaths, 28 Sept. 1897; another fire, 200 houses burnt, reported, 7 Feb. 1898. See *Spanish-American War*.

MANIPUR (Manipore), a small native state, N.E. India, adjoining Assam and Burmah; population, 1881, 221,070; army about 5,000.

The state has long been protected by the British from the attacks of the Burmese. In 1834, Gumbheer Singh, the restored rajah, died, and was succeeded by his son, Chandra Kirti Sing, two years old. The regent, Nar Singh, a relative, usurped the government, and ruled till his death in 1850, when the young rajah was restored; a British resident being afterwards placed in the capital, with good effect. Much trouble was given by rival members of his family till 1866; he died in 1885 or 1886. He left eight sons, who formed opposing parties. The eldest, Sura Chandra Singh, became maharajah, and appointed his eldest brother, Kula Chandra Dhuya Singh, jubraj, or heir-apparent, afterwards termed regent, a weak, incapable man. In Sept. 1890, his brother, Takendrajil Singh, the senaputti, or commander-in-chief, dethroned the maharajah and set up the jubraj in his place. The maharajah retired to Calcutta.

On 21 Feb. 1891, Mr. James W. Quinton, chief commissioner of Assam, was directed to proceed with a sufficient force to Manipur, to recognise the regent, and to remove the senaputti. He entered Manipur 22 March, with 470 men and officers, civil and military, and was well received by the regent and the senaputti, but could not succeed in getting the latter to attend a durbar or court. Mr. Quinton as an ultimatum required the surrender of the senaputti, the letter being taken by Mr. F. St C. Grimwood, political agent, without any result, 23 March. On the 24th, colonel Skene proceeded with 250 men to arrest the senaputti at his house within the fort inclosure, of which they obtained possession after a sharp struggle, during which lieut. Brackenbury was mortally wounded. The senaputti had escaped. About 10 A.M., the Manipuris opened fire on the residency in front, and about noon on the rear, and shelled it. About 4 P.M. the troops were withdrawn from the senaputti's house, and all the force was posted in the residency, which was seriously damaged by artillery about 5 P.M., and the ammunition began to fall short. About 7 P.M. negotiations were re-opened by letter from Mr. Quinton, and the firing ceased, but the conditions offered by the regent could not be accepted. Having been invited by the senaputti halfway between the residency and the palace, Mr. Quinton took with him colonel Skene, Mr. F. St. C. Grimwood, Mr. H. Cossins, and lieut. Simpson, unarmed, and without escort. After a long parley, the party entered the fort and were seen no more, and it was afterwards discovered that they were all killed (beheaded or otherwise). The firing re-commenced about midnight. The ammunition having been greatly reduced, it was decided to retire from the residency, and to march across the country to meet captain Cowley's advancing party. This was done about 2 A.M. on the 25th, the party taking with them 17 wounded, and Mrs. Grimwood, who displayed much judgment, courage, and humanity. There was no serious resistance during the march, but a few skirmishes occurred. About 10 A.M. they met captain Cowley's party, who supplied them with food and other assistance. They continued their march, arriving, on 30 March, at Lakhipur on the Cachar frontier.

Lieut. C. J. W. Grant hearing, on 27 March, of the disaster at Manipur, volunteered to attempt the relief of the British captives, and marched with 80 native soldiers from Tamu in Burmah, 28 March; entrenched himself near Thobal, 31 March; held out against the attacks of the Manipuri army (about 3,000) till 7 April; and resisted negotiations judiciously; only 1 killed.

[Lieut. Grant was made major and otherwise honoured.]

About 2,000 Manipuris, entrenched near Tamu, attacked and dispersed by general Graham's party, captain Drury being especially successful, 25 April; three columns under gen. Graham, and others from different directions converge at Manipur, which they find totally deserted, the regent, senaputti, and other princes having fled, 26 April; the palace had been blown up; the heads of Mr. Quinton and his companions were found in the enclosure.

Funeral ceremony was held over the exhumed bodies of Mr. Quinton and his companions, 30 April; general Collett was left in command at Manipur, some of the troops left. The Manipuris returned to their homes, May; the regent and his minister were captured, 8 May, and the senaputti,

about 23 May, 1891

The regent, the senaputti, and prince Angao Sena, a younger brother, were tried for rebellion and abetting to murder, and sentenced to death (all appealed) . . . . . 9–20 June, ,,

The sentences of death on the senaputti and the Tongal general, as implicated in the murders, were confirmed. The sentences on the regent

and his younger brother commuted to transportation for life to the Andaman Islands; forfeiture of property, announced 10 Aug. The senaputti and the Tongal general hanged at Manipur, 13 Aug. 1891

It was decided that Manipur should still be ruled by a native prince, 23 Aug.; and Chura Chand, aged 5, great grandson of Nar Singh, was appointed rajah, 13 Sept.; dignity to be hereditary, subject to the government of India; an annual tribute to be paid; declaration communicated . . Oct. ,,

The young prince was invested with a dignity, 29 April, 1892

MANNHEIM (S. Germany), founded in 1606, became the court residence of the palatine of the Rhine in 1719; but his becoming elector of Bavaria in 1777 caused the removal of the court to Munich. Mannheim surrendered to the French, under command of general Pichegru, 20 Sept. 1795. On 31 Oct. the Austrians under general Wurmser defeated the French near the city. Several battles were fought with various success in the neighbourhood during the wars of Napoleon I. Kotzebue, the popular dramatist, was assassinated at Mannheim, by Sand, a student of Wurtzburg, 2 April, 1819. Population, 1890, 79,044.

MANOMETER (Greek, *manos*, thin), an instrument for measuring the rarity of the atmosphere, gases, and vapours. One is said to have been made by Otto von Guericke about 1660, and the "statical barometer" of Robert Boyle was a simple manometer. Various forms of the apparatus were devised by Ramsden (about 1773), by Roy (1777), by Cazalet (1789), and by Bourdon and others. A manometer was constructed for the investigation respecting the elasticity of steam conducted by Prony, Arago, Dulong, and Girard, 1830.

MANORS are as ancient as the Saxon times, and imply a territorial district with its jurisdiction, rights, and perquisites. They were formerly called baronies, and still are lordships. Each lord was empowered to hold a court called the court-baron for redressing misdemeanours, and settling disputes between the tenants. *Cabinet Lawyer.*

MARATHON (in Attica). Here, on 28 or 29 Sept 490 B.C., the Greeks, only 11,000 strong, defeated the Persian army amounting to about 110,000. The former were commanded by Miltiades, Aristides, and Themistocles. Among the slain (about 6400) is said to have been Hippias, who had been expelled from Athens, and was the instigator of the war. The Persian army was forced to retreat to Asia; see *Greece*.

Investigations in 1890 on the presumed site of this battle led to the discovery of vases, and the probable grave of the 192 Athenians who fell.

MARBLE. Dipœnus and Scyllis, statuaries of Crete, were the first artists who sculptured marble, and polished their works; all statues previously being of wood, about 568 B.C. *Pliny*. The edifices or monuments of Rome were constructed of, or ornamented with, fine marble. The ruins of Palmyra are chiefly of white marble. The marble arch, London, erected at Buckingham palace, 1830, was removed to Hyde-park, March, 1851.

MARBURG (W. Germany). The cathedral was founded, 1231; and the first Protestant university in 1527. It suffered much during the Seven years' war, 1753-60.

MARCH, the first month of the Roman year, until Numa added January and February, 713 B.C. It is said that Romulus gave to this month the name of his supposed father, Mars; though Ovid observes, that the people of Italy had the month of March before the time of Romulus, but placed it differently in the calendar. The year commenced on the 25th of this month till 1753; see *Year*. The March of 1845 and 1886 had much frost and skating.

MARCHES. The old boundaries between England and Wales, and England and Scotland. The Lords Marchers of the Welsh borders had viceregal authority; the wardens of the Scotch marches were subordinate officers. These powers were abolished, 1536, and 1689.

MARCHFELD (Austria). Here Ottocar II. of Bohemia was defeated and slain by his rival, the emperor Rodolph of Hapsburg, 26 Aug. 1278; see *Bohemia*.

MARCIONITES, followers of Marcion, a heretic, about 150, who preceded the Manichees, and taught similar doctrines. *Cave*.

MARCOMANNI, a people of Southern Germany, expelled the Boii from Bohemia, and, united with other tribes, invaded Italy about 167, but were repelled by the emperors Antoninus and Verus. They were defeated by the legion called, from a fabled miracle, the Thundering Legion, 179; and finally driven beyond the Danube by Aurelian, 271.

MARENGO (N. Italy). Here the French army, commanded by Bonaparte, after crossing the Alps into Piedmont, attacked the Austrians, 14 June, 1800; his army was retreating, when the arrival of general Dessaix turned the fortunes of the day. The slaughter on both sides was dreadful. By a treaty between the Austrian general Melas and Bonaparte, signed 15 June, the latter obtained twelve strong fortresses, and became master of Italy.

MARESCHALS or MARSHALS, in France, were the esquires of the king, and originally had the command of the vanguard to observe the enemy and to choose proper places for its encampment. Till the time of Francis I., in 1515, there were but two marshals, who had 500 livres per annum in war, but no stipend in time of peace. The number was afterwards greatly increased. Napoleon's marshals were renowned for skill and courage; see *Marshal*.

MARGATE, Kent, Royal sea-bathing infirmary founded 1792, enlarged 1882. The town-hall was erected in 1820. Population, 1881, 16,030; 1891, 18,419. New park, presented by Mr. J. Woodward, opened by the lord mayor, 1 June, 1898.

MARIAN PERSECUTION, see *Protestants*.

MARIGNANO (now MALEGNANO), N. Italy, near Milan. Three battles have been fought near here—1. Francis I. of France defeated the duke of Milan and the Swiss, 13, 14 Sept. 1515; above 20,000 men were slain. This conflict has been called the Battle of the Giants.—2. Near here was fought the battle of Pavia (*which see*), 24 February, 1525.—3. After the battle of Magenta, 4 June, 1859, the Austrians entrenched themselves at Malegnano. The emperor sent marshal Baraguay d'Hilliers with 16,000 men to dislodge them, which he did with a loss of about 850 killed and wounded, on 8 June. The Austrians are said to have lost 1400 killed and wounded, and 900 prisoners, out of 18,000 engaged.

MARINER'S COMPASS, see *Compass*, and *Magnetism*.

MARINES, soldiers serving on ship-board, were first established with the object of forming a nursery to man the fleet. An order in council, dated 16 Oct. 1664, authorised 1200 soldiers to be raised and formed into one regiment. In 1684, the third regiment of the line was called the Marine Regiment; but the system of having soldiers exclusively for sea service was not carried into effect until 1698, when two marine regiments were formed. More regiments were embodied in subsequent years; and in 1741 the corps consisted of ten regiments, each 1000 strong. In 1759 they numbered 18,000 men. In the latter years of the French war, ending in 1815, they amounted to 31,400, but there were frequently more than 3000 supernumeraries. The *jollies*, as they are called, frequently distinguished themselves. The "Royal Marine Forces" (so named 1 May, 1802), now comprehend artillery and light infantry. The vote for 1857 was for 16,000 marines, inclusive of 1500 artillery. *P. H. Nicolas*. Marine Engineers' Institution, founded in 1872. Officers of the marines made equal in rank with those in the army and navy, Dec. 1882. The Historical Records of the Royal Marines, edited by major L. Edye, published 1893, *et seq*.

MARINO, SAN, a republic in central Italy. Its origin is ascribed to St. Marinus, a hermit, who resided here in the 5th century. Its independence lost for a short time, to Cæsar Borgia, 1503, and to the pope, 1739; was confirmed by pope Pius VII. in 1817. A convention with Italy, 27 March, 1872. Population, in 1858, about 8000; in 1869, 7303; in 1874, 7816; in 1891, about 8,000.

MARIOLATRY, worship of the virgin Mary, began in the 4th century, greatly increased in the 10th.

MARONITES, Christians in the East, followers of one Maron in the 5th century; they are said to have embraced the errors of the Jacobites, Nestorians, and Monothelites. About 1180 they numbered 40,000, living in the neighbourhood of mount Libanus, and were of service to the Christian kings of Jerusalem. They were reconciled to the church of Rome soon after. For an account of the massacres of the Maronites in 1860, see *Druses*.

MAROONS, a name given in Jamaica to runaway negroes. When the island was conquered from the Spaniards, a number of their negroes fled to the hills and became very troublesome to the colonists. A war of eight years' duration ensued, when the Maroons capitulated on being permitted to retain their free settlements, about 1730. In 1795 they again took arms, but were speedily put down and many were transported. *Brande*.

MAR-PRELATE TRACTS, virulently attacking episcopacy, were mostly written, it is believed, by John Penry, who was cruelly executed, 29 May, 1593, for writing seditious words against the queen (found about his person when seized). The tracts appeared about 1586. Some had very singular titles: such as "An Almand for a Parrat," "Hay any Worke for Cooper?" &c. They were collected and reprinted in 1843.

MARQUESAS ISLANDS (Polynesia) were discovered in 1595 by Mendana, who named them after the viceroy of Peru, Marquesa de Mendoça. They were visited by Cook in 1774, and were taken possession of by the French admiral Dupetit Thouars, 1 May, 1842.

MARQUIS, a dignity, called by the Saxons markin-reve, by the Germans markgrave, took its original from mark or March, a limit or bound (see *Marches*); the office being to guard or govern the frontiers of a province. Marquis is next in honour to a duke. The first Englishman on whom the title was conferred was the favourite of king Richard II., Robert de Vere, earl of Oxford, created marquis of Dublin, and placed in parliament between the dukes and earls, 1385. James Stewart, second son of James III. of Scotland, was made marquis of Ormond, in 1476, without territories, afterwards earl of Ross.

MARRIAGE was instituted by God (*Gen.* ii.), and confirmed by Christ (*Mark* x.), who performed a miracle at the celebration of one (*John* ii.). Matrimonial ceremonies among the Greeks are ascribed to Cecrops, king of Athens, 1554 B.C. See *Age*, *Affinity*.

ROYAL MARRIAGE ACT, 12 Geo. III. c. 11, was passed in 1772, in consequence of the marriage of the duke of Gloucester, the king's brother, with the widow of the earl Waldegrave, and of the duke of Cumberland with the widow of colonel Horton and daughter of lord Irnham. [By this act, none of the descendants of George II., unless of foreign birth, can marry under the age of 25, without the consent of the king; at and after that age, after twelve months' notice given to the privy council, they may contract such marriage, which shall be good unless both houses of parliament disapprove. The marriage of the duke of Sussex with the lady Augusta Murray, solemnised in 1793, was pronounced illegal, 1794, and the claims of their son, sir Augustus d'Este, declared invalid, by the house of lords, 9 July, 1844. He married lady Cecilia Underwood (afterwards duchess of Inverness), 1831.

H. R. H. the princess Louise was married to the marquis of Lorne by the queen's consent, 21 March, 1871.

HALF MARRIAGE. *Semi-Matrimonium.* Among the Romans concubinage was a legitimate union, not merely tolerated but authorised. The concubine had the name of *semi-conjux.* Men might have either a wife or a concubine, provided they had not both together. Constantine the Great checked concubinage, but did not abolish it. This ancient custom of the Romans was preserved, not only among the Lombards, but by the French when they held dominion in that country. Cujas assures us that the Gascons and other people bordering on the Pyrenean mountains had not relinquished this custom in his time, 1590. The women bore the name of "wives of the second order." *Hénault.* See *Morganatic Marriages.*

* Of these marriages, it is stated in the registrar's returns that 47,570 men and 70,601 women could not write, and that they signed the marriage register with their marks.—In France, the marriages were 208,893 in 1820; 243,674 in 1825; and 259,177 in 1830. As respects Paris, 7754 marriages were, bachelors and maids, 6456; bachelors and widows, 368; widowers and maids, 708; widowers and widows, 222.

† Approximative, through doubtful returns.

DOUBLE MARRIAGES. There are some instances of a husband and two wives (but they are very rare) in countries where polygamy was interdicted by the state. The first Lacedæmonian who had two wives was Anaxandrides, the son of Leon, about 510 B.C. Dionysius of Syracuse married two wives, viz. : Doris, the daughter of Xenetus, and Aristomache, sister of Dion, 398 B.C. It is said that the count Gleichen, a German nobleman, was permitted, under peculiar circumstances, by Gregory IX., in A.D. 1237, to marry and live with two wives. The Mormonites practise and encourage polygamy.

FORCED MARRIAGES. The stat. 3 Henry VII. (1487) made the principal and abettors in marriages with heiresses, &c., contrary to their will, equally guilty as felons. By 39 Eliz. (1596) such felons were denied the benefit of clergy. This offence was made punishable by transportation, 1 Geo. IV. (1820). The remarkable case of Miss Wharton, heiress of the house of Wharton, whom captain Campbell married by force, occurred in William III.'s reign. Sir John Johnston was hanged for seizing the young lady, and the marriage was annulled by parliament, 1690.—Edward Gibbon Wakefield was tried at Lancaster, and found guilty of the felonious abduction of Miss Turner, 24 March, 1827 ; and his marriage with her was immediately dissolved by act of parliament.

MARRIAGES BY SALE. Among the Babylonians, at a certain time every year, the marriageable females were assembled, and disposed of to the best bidder. This custom is said to have originated with Atossa, daughter of Belochos, about 1433 B.C.

MAR'S INSURRECTION.

John, earl of Mar, proclaimed James III. at Braemar, Aberdeenshire, 6 September, 1715. He was defeated at Sheriffmuir, 13 Nov., and escaped from Montrose with the Pretender, 4 Feb. 1716.

MARS,

a planet, next to the earth in order of distance from the sun; the spots on its surface were first observed by Fontana, in 1636. Two satellites named Phobos and Deimos, were discovered by professor Asaph Hall, at Washington, U.S., 11 Aug. 1877.

M. Dubois of Paris suggests that these satellites may be planetoids attracted by Mars, Aethra and another of these bodies having disappeared about the time of the discovery.

M. Schiaparelli, of Milan, describes configurations like canals, 1882, and M. Perrotin since has mapped them and asserts that Mars has an atmosphere and clouds (1887)

"They have likewise discovered two lesser stars or satellites which revolve about Mars." — *Swift,* Gulliver's Travels—Voyage to Laputa, about 1726.

MARSAGLIA

(Piedmont, N. Italy). Here the imperialists under prince Eugene and the duke of Savoy were defeated by the French under Catinat, 4 Oct. 1693.

MARSEILLAISE HYMN.

The words and music are ascribed to Rouget de Lille, or L'Isle, a French engineer officer, who, it is said, composed it by request, 1792, to cheer the conscripts at Strasburg. It derived its name from a body of troops from Marseilles marching into Paris in 1792 playing the tune. This account is doubted by some (1879). The author was pensioned by Louis Philippe, 1830, and died in 1836.

MARSTON-MOOR (near York). The Scots and parliamentary army were besieging York, when prince Rupert, joined by the marquis of Newcastle, determined to raise the siege. Both sides drew up on Marston-moor, on 2 July, 1644, and the contest was long undecided. Rupert, commanding the right wing of the royalists, was opposed by Oliver Cromwell, at the head of troops disciplined by himself. Cromwell was victorious; he drove his opponents off the field, followed the vanquished, returned to a second engagement and a second victory. The prince's artillery was taken, and the royalists never recovered the blow.

MASQUERADES were in fashion in the court of Edward III., 1340; and in the reign of Charles II. 1660, masquerades were frequent among the citizens. MASS, in the Roman church, is the office or prayers used at the celebration of the Eucharist, in memory of the passion of Christ, and to this every part of the service alludes. The general division consists in high and low; the first is that sung by choristers, and celebrated with the assistance of a deacon and sub-deacon; low masses are those in which the prayers are rehearsed without singing. Mass was first celebrated in Latin about 394; it was introduced into England in the 7th century. Prostration was enjoined at the elevation of the host in 1201. Dr. Daniel Rock, in "The Church of our Fathers" (1849), describes an ancient MS. of "The Service of the Mass, called the Rite of Salisbury," compiled for that cathedral, by St. Osmund and others, during the 12th century. The English communion service was adopted in 1549; see *Missal*, and *Ritualism*.

MASTER OF THE CEREMONIES, see *Ceremonies.*

MASTER AND SERVANT ACT (amending the statute respecting them) was passed 20 Aug. 1867; another act repealing parts of preceding acts was passed 26 July, 1889. See *Servants.*

Royal commission to examine into its working, reported 31 July; published evidence . Oct. 1874

MASTER OF THE GREAT WARDROBE, an ancient office abolished in 1782; duties transferred to the lord chamberlain.

MASTER OF THE REVELS, an officer of the court. Solomon Dayrolle was the last appointed.

Part of the duties were transferred to the licenser of plays, 1737.

MASTER OF THE ROLLS, an equity judge, derives his title from having the custody of all charters, patents, commissions, deeds, and recognizances, entered upon rolls of parchment; his decrees are appealable to the court of chancery. The repository of public papers, called the Rolls, was in Chancery-lane. The rolls were formerly kept in a chapel founded for the converted Jews; but after the Jews were expelled the kingdom in 1290 it was annexed for ever afterwards to the office of the mastership of the rolls. Here were kept all the records since the beginning of the reign of king Richard III., 1483; all prior to that period being kept in the Tower of London; see *Records*. The first recorded master of the rolls was either John de Langton, appointed 1286, or Adam de Osgodeby, appointed 1 Oct. 1295; but it is clear that the office was in existence long before. *Hardy*. The duties were defined in 1833; the salary regulated in 1837. Changes by the judicature act of 1881. By the supreme court of judicature act, the master of the rolls was made a judge of appeal only.

The office was abolished in 1852. MATERIALISM, the doctrine held by those who maintain that the soul of man is not a spiritual substance distinct from matter, but is the result of a particular organisation of matter in the body. The term is rather loosely applied to the system of Epicurus, about 310 B.C.; Hobbes, about A.D. 1642; Priestley, about 1772; and many eminent men in the present day. It is not necessarily identical with atheism, see *Animism*.

MATERNITY CHARITY, ROYAL, Finsbury; founded 1757.

MATHEMATICS formerly signified all kinds of learning; but the term is now applied to the sciences relating to numbers and quantity; see *Arithmetic*. Among the most eminent mathematicians were Euclid, 300 B.C.; Archimedes, 287 B.C.; Descartes, died 1650 A.D.; Barrow, died 1677; Leibnitz, died 1716; sir Isaac Newton, died 1727; Euler, died 1783; Lagrange, died 1813; Laplace, died 1827; and Dr. Peacock, died 1858; sir G. Arthur Cayley, born 16 Aug. 1821, barrister, 1849–63; wrote above 800 papers, 1852–94: much honoured abroad; (died 26 Jan. 1895), are eminent mathematicians. MATTER is held to exist in three states: gaseous, liquid, and solid. Mr. William Crookes considers that there is a fourth state, "radiant matter," subtler than any of these, 1879-80. See *Light*.

MATTERHORN, a part of the main ridge of the Alps, about 14,836 feet high, S. Switzerland. After various fruitless attempts by professor Tyndall and other eminent climbers, in 1860, the summit was reached on 14 July, 1865, by Mr. Edward Whymper and others. During their descent, four of the party were killed. Mr. Hadow fell; the connecting rope broke, and he himself, lord Francis Douglas, the rev. Mr. Hudson, and Michael Croz, a guide, slipped down, and fell from a precipice nearly 4000 feet high. Miss Walker, with her father, ascended the Matterhorn, 22 July, 1871. Three gentlemen ascended without a guide, 21 July, 1876. Dr. W. O. Moseley, an American, was killed here, 14 Aug. 1879. Three persons attempting the ascent perished 12 Sept. 1890.

MAUNDY-THURSDAY (derived by Spelman from *mande*, a hand-basket, in which the king was accustomed to give alms to the poor; by others from *dies mandati*, the day on which Christ gave his grand *mandate*, that we should love one another), the Thursday before Good Friday. *Wheatly*. On this day it was the custom of our sovereigns or their almoners to give alms, food, and clothing to as many poor persons as they were years old. It was begun by Edward III., when he was fifty years of age, 1363, and is still continued.

MAUR, ST., see *Benedictions*.

MAURITANIA (N. Africa), with Numidia, became a Roman province, 33 B.C. Augustus created (30 B.C.) a kingdom formed of Mauritania and part of Getulia, for Juba II., a descendant of the ancient African princes. Suetonius Paulinus suppressed a revolt here, A.D. 42, when it was made a province, divided into parts. The country was subjugated by the Vandals, 429, and Greeks, 533, and fell into the hands of the Arabs, about 680; see *Morocco*, and *Moors*.

MAURITIUS, or ISLE OF FRANCE (in the Indian Ocean), was discovered by the Portuguese, 1505; but the Dutch were the first settlers in 1598. They called it after prince Maurice, their stadtholder, but on the acquisition of the Cape of Good Hope, they deserted it; and it continued unsettled until the French landed, and gave it the name of one of the finest provinces in France, 1715. This island was taken by the British, 2 Dec. 1810, and confirmed to them by the treaty of Paris in 1814. The bishopric was founded 1854. Sir Henry Barkly, governor, in 1863, succeeded by sir Arthur H. Gordon, 1870; sir Arthur Purves Phayre, 1874; sir George F. Bowen, 1878; sir J. Pope Hennessy, Dec. 1882; sir Charles Cameron Lees, Sept. 1889; Sir Herbert E. H. Jerningham, April, 1893; sir C. Bruce, Jan. 1897. MAUSOLEUM. Artemisia married her own brother, Mausolus, king of Caria, Asia Minor, 377 B.C. At his death, 353, it is said she drank in liquor his ashes after his body had been burned, and erected to his memory at Halicarnassus a monument, one of the seven wonders of the world (350 B.C.), termed *Mausoleum*. She invited all the literary men of her age, and proposed rewards to him who composed the best elegiac panegyric upon her husband. The prize was adjudged to Theopompus, 357 B.C. She died 352 B.C. The statue of Mausolus is among the antiquities brought from Halicarnassus by Mr. (aft. sir) C. T. Newton in 1857, and placed in the British Museum. A mausoleum for the royal family of England was founded by the queen at Frogmore, 15 March, 1862.

MAUVE (French for *malva*, mallow), a dye produced by Dr. Stenhouse from lichens in 1848; now produced from *Aniline* (*which see*).

MAY, the fifth month of the year, received its name, some say, from Romulus, who gave it this appellation in respect to the senators and nobles of his city, who were denominated *majores;* others supposed it was so called from Maia, the mother of Mercury, to whom they offered sacrifices on the first day. The ancient Romans used to go in procession to the grotto of Egeria on May-day; see *Evil May-day*.

Mrs. Elizabeth Montague (who died in 1800) gave for many years, on May-day, an entertainment at her house in Portman-square, to the chimney-sweepers of London.

The annual festival of "Jack in the Green," and his companion sweeps, has gradually ceased, 1876.

MAYNOOTH COLLEGE (Ireland), founded by parliament, 1795, and endowed by a yearly grant voted for the education of students designed for the Roman Catholic priesthood in Ireland. An act for its government was passed in 1800. It contains about 500 students. Permanent endowment of this college (30,000*l.* for the enlargement of the buildings and 26,000*l.* annually) was granted by parliament, June, 1845. This occasioned much controversy in England, a motion being made for its abolition almost every session. The college was repaired and enlarged in 1860. By the Irish Church act, passed 26 July, 1869, the annual parliamentary grant was to cease after 1 Jan. 1871; a compensation being made. A synod held here, Sept. 1875, condemned mixed education. The buildings were much injured by fire, 31 Oct. 1878; damage estimated at 10,000*l.* The pictures and books were saved. The centenary celebrated, an international assembly of ecclesiastics present, 25-27 June, 1895.

MAYO ASSASSINATION. Richard Southwell Bourke, earl of Mayo, was born 21 Feb. 1822. As lord Naas he was chief secretary for Ireland, in the Derby and Disraeli administrations, 1852, 1858-9, 1866-8. In Sept. 1868, he was appointed viceroy of India, and energetically fulfilled the duties. He was assassinated at Port Blair in the Andaman islands, on a visit of inspection, by Shere Ali, a convict, 8 Feb. 1872. The Indian government granted an annual pension of 1000*l.* to the countess, and 20,000*l.* for the children; and 1000*l.* a year was added to lady Mayo's pension by parliament, voted unanimously, 22 July, 1872.

MAYORS OF CORPORATIONS. At the time of the Norman conquest, 1066, the chief officer of London was called *port-grave*, afterwards softened into *port-reeve*, from Saxon words signifying chief governor of a harbour. He was afterwards called provost; but in Henry II.'s reign the Norman title of *maire* (soon after *mayor*) was brought into use. At first the mayor was chosen for life, but afterwards for periods of irregular duration; now he is chosen annually, but is eligible for re-election. He must be an alderman, and have been sheriff. His duties commence on 9 Nov. In early times the mayor was always an M.P. for the city. The prefix LORD is peculiar to the mayors of London, Dublin, York, Belfast, Liverpool, Manchester, Leeds, Birmingham and Sheffield, and to the provosts of Edinburgh, Glasgow, Dundee, Aberdeen and Perth. The dukes of Norfolk and Sutherland, the marquis of Ripon, and the earls of Derby and Lonsdale, and 6 other peers were elected mayors, Nov. 1895.

MEAL TUB PLOT, against the duke of York, afterwards James II., contrived by one Dangerfield, who secreted a bundle of seditious letters in the lodgings of colonel Maunsell, and then gave information to the custom-house officers to search for smuggled goods, 23 Oct. 1679. After Dangerfield's apprehension, on suspicion of forging these letters, papers were found concealed in a *meal-tub* at the house of a woman with whom he cohabited, which contained the scheme to be sworn

to, accusing the most eminent persons in the Protestant interest, who were against the duke of York's succession, of treason,—particularly the earls of Shaftesbury, Essex, and Halifax. On Dangerfield being whipped the last time, as part of his punishment, 1 June, 1685, one of his eyes was struck out by a barrister named Robert Francis. This caused his death, for which his assailant was hanged.

Many episcopal sees in Meath (as Clonard, Duleek, and others of less note) were fixed at Clonard, before 1151-2, when the division of the bishoprics in Ireland was made by John Paparo, then legate from Pope Eugene III. Eugene was the first styled bishop of Meath, about 1174. Meath was valued, 30 Henry VIII., at 373*l.* 12*s.* per annum.

MECCA (in Arabia), the birth-place of Mahomet, about 571, whence he was compelled to flee, 15 July, 622 (the Hégira). On one of the neighbouring hills is a cave, where it is asserted he retired to perform his devotions, and where the greatest part of the Koran was brought to him by the angel Gabriel, 604. Mecca, after being vainly besieged by Hosein for the caliph Yezid, 682, was taken by Abdelmelek, 692. In 1803 it fell into the hands of the Wahabees, a Mahometan sect. They were expelled by the pacha of Egypt in 1818, who retired in 1841. It is said that 160,000 pilgrims visited Mecca in 1858, and only 50,000 in 1859. The grand shereef was assassinated by a fanatic, 21 March, 1880. Pilgrimage to Mecca still continues; annual average, 93,350 (1887); about 300,000 in 1893.

MECHLIN or MALINES (Belgium), renowned for its lace manufacture, was founded in the 6th century; destroyed by the Normans in 884; sacked by the Spaniards, 1572; taken by the prince of Orange, 1578, and by the English, 1580; and frequently captured in the 17th and 18th centuries, partaking in the evil fortunes of the country. A Roman Catholic congress was held here Sept. 1867. Population 1890, 50,962.

MECKLENBURG (N. Germany), formerly a principality in Lower Saxony, now independent as the two grand duchies of Mecklenburg-Schwerin (population in 1885, 575,152; 1890, 578,565) and Mecklenburg-Strelitz (population in 1885, 98,371; 1890, 97,978). The house of Mecklenburg claims to be descended from Genseric the Vandal, who ravaged the western empire in the 5th century, and died 477. During the Thirty years' war Mecklenburg was conquered by Wallenstein, who became its duke, 1628; it was restored to its own duke, 1630. After several changes the government was settled in 1701 as it now exists in the two branches of Schwerin and Strelitz. In 1815 the dukes were made grand dukes. The dukes joined the new North German confederation by treaty, 21 Aug. 1866.

MEDALS, see *Numismatics*. The ancient medals resembled medallions. Modern medals began about 1453 in the 15th century with the works of Vittore Pisano, of Verona, who died 1456, and his followers. Charles I. authorized the presentation of a badge or medal for "forlorn hopes" soldiers, May, 1643. The house of commons resolved to grant rewards and medals to the fleet whose officers (Blake, Monk, Penn and Lawson) and men gained a glorious victory over the Dutch fleet, off the Texel, in 1653. Blake's medal of 1653 was bought by his majesty, William IV. for 150 guineas. In 1692 an act was passed for applying the tenth part of the proceeds of prizes for medals and other rewards for officers, seamen, and marines. Subsequent to Lord Howe's victory, 1 June, 1794, it was thought expedient to institute a naval medal. Medals were struck for the victory of Waterloo; a general war medal (for the war 1793-1814) was ordered in 1847; and special medals were given after the Caffre and Chinese wars. Medals were presented by the queen to persons distinguished in the war in the Crimea, 18 May, 1855. Medals were given to arctic voyagers of 1875-6, in 1877; after Egyptian war, 1882, distributed by the queen at Windsor, 21 Nov. 1882; medals for the Soudan war, ordered, 2 Sept. 1885; a Burmah medal was given for the war, 1885-7. The road from London to Holyhead has long been regarded as the highway from the British metropolis to Dublin; Mr. Telford was applied to by the government to perfect this route by the London and Holyhead mail-coach road, which he did by erecting beautiful suspension bridges over the river Conway and the Menai Strait, commenced in July, 1818, finished in July, 1825, opened 30 Jan. 1826. The Britannia tubular bridge over the Menai was constructed by Stephenson and Fairbairn in 1849-50; see *Tubular Bridges.*

MENDICANT FRIARS. Several religious orders commenced alms-begging in the 13th century, in the pontificate of Innocent III. They spread over Europe, and formed many communities; but at length by a general council, held by Gregory X. at Lyons, in 1272, were reduced to four orders—Dominicans, Franciscans, Carmelites, and Augustines. The Capuchins and others branched off; see *Franciscans*, &c.

MENDICITY SOCIETY (Red Lion-square, London), was established in 1818 for the suppression of public begging, and other impositions. Tickets received from the society are given by subscribers to beggars, who obtain relief at the society's house, if deserving. In 1857, 54,074 meals; in 1860, 42,912; in 1865, 52,137; in 1872, 26,330; in 1878, 55,180 were distributed. In 1878, 1700 begging letters were investigated; in 1891, 1358; in 1896, 1,516; in 1897, 1,611. 1,400*l.* were expended in relief in 1894; 1,244*l.* in 1897; and 1,182 vagrants apprehended. (See *Poor.*) The society has been much aided by the action of the Charity Organization society; es ablished in 1870; they agree to co-operate together, June, 1897.

MENIPPÉE, see *Satire.*

MENNONITES, four sects of Dutch, Flemish and German baptists; derive their name from Menno Symonis (1505-61), formerly a catholic priest, who became a teacher and leader of the anabaptists, about 1537, and published his "True Christian Belief" in 1556; subsequently divisions and changes ensued. The Mennonites, objecting to war, emigrated from Prussia to Odessa, to escape military service, and went thence to America, 1878.

MENSURATION. The properties of conic sections were discovered by Archimedes, to whom the chief advancement in mensuration may be attributed. He also determined the ratio of spheres, spheroids, &c., about 218 B.C.; see *Arithmetic.* The *Mensurator*, a new machine for the solution of triangles, was explained by Mr. W. Marsham Adams, at the British Association Meeting at Brighton, Aug. 1872.

MENTANA, (near Monte Rotondo, in the old papal states). Here Garibaldi and his volunteers, after having intrenched his positions at Monte Rotondo and Mentana on their march towards Tivoli, on Sunday, 3 Nov. 1867, were totally defeated by the pontifical and French troops under generals Kanzlar and Polhès, after a severe conflict, in which general Failly said "the Chassepot rifles did wonders." There were about 5000 men on each side, but the Garibaldians were very badly armed. The loss of the papal and French troops was about 200 killed and wounded; that of Garibaldi about 800. Garibaldi crossed the Italian frontier, and was arrested at Correse, and eventually sent to Caprera (about 25 Nov.). See *Rome.* A monument to the Garibaldians who fell here was inaugurated 25 Nov. 1877.

MENTZ or MAYENCE (S.W. Germany), the Roman *Moguntiacum*, built about 13 B.C. The archbishopric was founded by Boniface, 745. Many diets have been held here; and here John Faust established a printing press, about 1440. A festival in honour of John Gutenberg was celebrated here in 1837, another June, 1890. See *Printing.* Mentz was given up to the Prussians, 26 Aug. 1866. Population 1890, 72,934.

Their school was founded in 1561. *Stow.*

MERCHANT SHIPPING ACT of 1854 was amended by acts passed in 1862, 1867, 1871, 1872, and 1873. The Act suddenly passed 13 Aug. 1875, gave further power to the Board of Trade for stopping unseaworthy ships. Other Acts passed 1876, 1880, 1882, 1883, 1889, 1892, consolidated 1894; amended, 1897 and 1898; see *Courts of Survey*, and *Seamen.*

MERCURY, the planet nearest the sun, and the smallest known to the ancients. Schiaparelli asserts his rotation to be as long as his revolution in his orbit. The transit of Mercury over the sun's disk, of rare occurrence and first observed by Gassendi, 1631, was well observed 5 Nov. 1868; at Athens, 10 May, 1891, well observed by Prof. Barnard at Lick Observatory, California, 10 Nov. 1894. Near this town, at Arroy dos Molinos, the British army under general (afterwards lord) Hill defeated the French under general Girard, after a severe engagement, 28 Oct. 1811. The British took Merida from the French in 1812, general Hill leading the combined forces of English and Spanish troops.

MESMERISM. Frederick Anthony Mesmer, a German physician, of Merseburg, published his doctrines in 1766, contending, in a thesis on planetary influence, that the heavenly bodies diffused through the universe a subtle fluid which acts on the nervous system of animated beings. Quitting Vienna for Paris, in 1778, he gained numerous proselytes and much money by experiments with and without metallic plates, producing effects termed then, "animal magnetism" now "hypnotism." A committee of physicians and philosophers investigated his pretensions, and Bailly, in a paper drawn up in 1784, exposed the futility of animal magnetism. Mesmerism excited attention again about 1848, when Miss Harriet Martineau and others announced their belief in it. In 1859, the Mesmeric Infirmary issued its tenth annual report, archbishop Whately being president, and the earl of Carlisle and Mr. Monckton Milnes (since lord Houghton) among the vice-presidents. See *Animal Magnetism* and *Hypnotism.*

The "New Mesmerism" exhibited in Paris by Dr. Luys and others, which included the alleged externalization of sensations and transference of sensibility to inanimate objects, such as dolls, was well described in the *Times*, 28 Dec. 1892, and 5, 11 Jan. 1893, and by Mr. Ernest Hart in the *British Medical Journal* . . . . MESSENIA (now *Maura-Matra*), in the Peloponnesus, an ancient kingdom. It had long sanguinary wars with Sparta. It was at first governed by kings; after its restoration to power in the Peloponnesus it formed an inferior republic, under the protection first of the Thebans, and afterwards of the Macedonians.

The *first* Messenian war began 743 B.C.; was occasioned by violence offered to some Spartan women in a temple of devotion common to both nations; the king of Sparta being killed in his efforts to defend the females. Eventually, Ithome was taken, and the Messenians became slaves to the conquerors . . . . . B.C. 724

METALS. Tubal-Cain is mentioned as an "instructor of every artificer in brass and iron." (*Gen.* iv.) The Phœnicians had great skill in

working metals. Bunsen and Kirchhoff's method of chemical analysis by means of the spectrum has added cæsium, rubidium, thallium, indium, gallium, and others to the known metals. See *Elements*, *Mines*, *Iron*, and the other metals. "Metallurgy," published by Dr. John Percy, 1861-80; he died 19 June, 1889. "Electro-Metallurgy," translated from the German of Dr. W. Borchers, with additions by Walter G. McMillan, published, 1897.

METAMORPHISTS in the 15th century affirmed that Christ's natural body, with which he ascended into heaven, was wholly deified.

METAPHYSICS, the science of abstract reasoning, or that which contemplates the existence of things without relation to matter. The term, literally denoting "after physics," originated from these words having been put at the head of certain essays of Aristotle, which follow his treatise on Physics. *Mackintosh.* Modern metaphysics arose in the 15th century—the period when an extraordinary impulse was given to the study of the human mind in Europe, commonly called the "revival of learning." Hobbes, Cudworth, S. T. Coleridge, Dugald Stuart, and sir W. Hamilton, were eminent British metaphysicians, and Descartes, Pascal, Kant, Schelling, and Fichte, foreign ones. See *Philosophy*.

METAURUS, a river in central Italy, where Hasdrubal, the brother of Hannibal, was defeated and slain, 207 B.C., when marching with abundant reinforcements. The Romans were led by Livius and Claudius Nero, the consuls. The latter commanded the head of Hasdrubal to be thrown into his brother's camp. The victory saved Rome.

METEMPSYCHOSIS, a doctrine attributed to Pythagoras, about 528 B.C., asserts the transmigration of the soul from one body to another. It is also ascribed to the Egyptians, who would eat no animal food lest they should devour the body into which the soul of a deceased friend had passed. They had also an idea that so long as the body of the deceased was kept entire, the soul would not transmigrate; and therefore embalmed the dead. See *Buddhism*.

METEOROGRAPH, an apparatus for the invention of which father Secchi of Rome received a prize at the Paris International Exhibition, July, 1867. It is self-acting, and registers the various changes of the atmosphere in the form of a diagram.

METEOROLOGY (from the Greek *meteōros*, aërial), the science which treats of the phenomena which have their origin in the air, such as rain, lightning, meteors, fogs, &c. The writings of Theophrastus, on meteorology, 3rd century B.C. were translated by Jas. G. Wood, edited by G. J. Symons, published 1894. Aristotle, Bacon, Boyle, and Franklin wrote on the subject.

The "British" Meteorological Society, established in 1850, chartered in 1866, became Royal, Oct. 1883; Mr. Henry Perigal, the treasurer, a scientist, died, aged 97, 6 June, 1898. By the exertions of Mr. James Glaisher, long the secretary, the apparatus at Greenwich was erected; and meteorology has appeared in the "Greenwich Observations" since 1848. See *Balloon—Scientific Ascents*.

The royal meteorological society's annual exhibitions began in 1880.

Meteorological observatories have been erected in all parts of the globe.

The Meteorological department of the Board of Trade, established in 1855, under admiral Fitzroy, commenced the publication of reports in 1857. The admiral published his "Weather-Book" in 1863. His exertions are said to have overworked his brain; and on 30 April, 1865, he died by his own hand. The Meteorological office was soon after placed under the direction of Mr. Robert H. Scott. It has issued apparatus and instruction books to captains of ships and established observatories in many places in the empire. It was handed over to the Royal Society in 1871, and endowed by Mr. J. P. Gassiot.

The plant is grown in the Botanical society's gardens, London. Many other plants possess this property *(W. Sowerby)*, Sept. 1888. During the experiments made at the Jodrell laboratory, Kew, by Dr. Oliver and Herr Joseph Nowack in October 1889, when many weather changes occurred, only one forecast was given by the weather plant, which therefore cannot be relied upon for meteorological purposes. Mr. J. F. Nowack maintains the success of his new system of forecasting atmospheric, etc., disturbances, by it, *Times*, 13 Dec. 1897.

METEORS, LUMINOUS, include shooting stars, fire-balls, and falling stones or aërolites. They were described by Halley, Wallis, and others early in the 17th century. The periodicity of the star showers about the 10th of August (termed in the middle ages St. Lawrence's tears) was discovered separately by Quetelet, 1836, and by Herrick in 1837. The following are remarkable epochs for their annual return:—2 Jan.; 29 July; 3 and 9-12 Aug.; 8-14 Nov.; 11 Dec. *R. P. Greg.* See *August.*

The magnificent continuous star-shower of 14 Nov. 1866, had been predicted by professor Newton some time previously. A fine display occurred on the night of 13 Nov. 1868, in the United States. A similar phenomenon had been witnessed by Humboldt at Cumana (S. A.), 12 Nov. 1799; and by Dr. D. Olmsted, at Newhaven (U.S.), 13 Nov. 1833. They were well observed in Britain and Europe, 27 Nov. 1872; and in Southern and Western Europe, 27 Nov. 1885.

METHUEN TREATY, a treaty for regulating the commerce between Great Britain and Portugal, made 27 Dec. 1703, concluded by Paul Methuen, our ambassador at Lisbon. It greatly favoured the importation of port wine into this country by lowering the duty, to the discouragement of French wines. It was abrogated in 1834.

By an act passed in 1855 a mixture of spirits of wine with 10 per cent. of its bulk of wood-naphtha, or methylic alcohol, is allowed to be made duty free for use in the arts and manufactures, not less than 450 gallons being made at one time. In 1861 an act was passed permitting the methylated spirits to be retailed by licence.

METONIC CYCLE, a period of 19 years, or 6940 days, at the end of which the changes of the moon fall on the same days; see *Calippic Period, Golden Number.*

METRIC SYSTEM. Before the revolution there was no uniformity in French weights and measures. On 8 May, 1790, the constituent assembly charged the Academy of Sciences with the organisation of a better system. The committee named for the purpose by the academy included the names of Berthollet, Borda, Delambre, Lagrange, Laplace, Méchain, and Prony. Delambre and Méchain were charged with the measurement of an arc of the meridian between Dunkirk and Barcelona, and from their calculations the *mètre*, which is equal to a ten-millionth part of the distance between the poles and the equator (3·2808 English feet) was made the unit of length and the base of the system by law on 7 April, 1795. The system was completed in 1799, and made by law the only legal one on 2 Nov. 1801. A decree on 12 Feb. accommodated the old measures to the new system; but on 4 July, 1837, it was decreed that after 1 Jan. 1840, the metric and decimal system in its primitive simplicity should be used in all business transactions. The example of France has been followed by the greater part of Europe, and will probably in time be adopted in the British empire.

METZ, a fortified city in Lorraine, annexed to the empire of Germany, 10 May, 1871. It was the Roman Divodunum or Meti, capital of the Mediomatrici, a powerful Gaulish tribe, and afterwards of the kingdom of Austrasia, or Metz, in the 6th century. It was made a free imperial city, 985. It was besieged by Charles VII. of France for seven months in 1444, and was ransomed for 100,000 florins; was captured by Henry II., 10 April, 1552, and successfully defended by the duke of Guise against the emperor Charles V. with an army of 100,000 men, 31 Oct. 1552 to 15 Jan. 1553. Metz was ceded to France by the peace of Westphalia, 24 Oct. 1648, and was fortified by Vauban and Belle-isle. On 28 July, 1870, the emperor Napoleon III. arrived at Metz and assumed the chief command. After the disastrous defeats at Woerth and Forbach, on 6 Aug. the whole French army (except the corps of MacMahon, De Failly, and Douay) was concentrated here, 10, 11 Aug., and by delay was hemmed in by the Germans. Marshal Bazaine assumed the chief command, 8 Aug. The emperor departed with the vanguard, which crossed the Moselle early on 14 Aug. Population, 1890, 60,194.

2. Battle of Vionville or Mars-la-Tour, gained by the 2nd army under prince Frederick Charles, after twelve hours' fighting. By the unexpected unmasking of a mitrailleuse battery, Henry, prince of Reuss, and many German nobles were killed in a few moments. The victory was at first claimed by the French. (This battle, the most sanguinary in the war hitherto, included a Balaclava charge of a German regiment of cavalry upon a French battery, by which it was decimated, but to which the victory was greatly due. Twice as many Germans were killed as at Königgratz, the killed and wounded being estimated at 17,000. The French loss was said to have been equally great) . . . 16 Aug. 1870
Bazaine masses his troops for a decisive conflict, 17 Aug. ,,
3. Battle of Rézonville or Gravelotte, gained by the combined 1st and 2nd armies, commanded by the king in person, after twelve hours' fighting. "The most desperate struggle took place on the slopes over Gravelotte, which the Germans gained by nightfall, after repeated fatal charges; the fortune of the day being long in suspense. But the right of the French had been outflanked, they fell back fighting to the last, and retired under cover of Metz. The French are said to have lost 19,000; and the Germans, 25,000." (The king, on the 19th, had not undressed for thirty hours. The carnage is considered to have been unexampled; a large number of French prisoners were made; and enormous loss was experienced by the imperial guard. The German army included Saxons and Hessians), 18 Aug. ,,

MICHAELMAS, 29 Sept., the feast of St. Michael, the reputed guardian of the Roman Catholic church, under the title of "St. Michael and All Angels." Instituted, according to Butler, 487.

The custom of eating goose at Michaelmas has been erroneously attributed to Queen Elizabeth's eating of the bird at dinner on 29 Sept. 1588, at the house of sir Neville Umfreyville, at the time she heard of the destruction of the Spanish Armada. The custom is of much older date, and is observed on the continent. *Clavis Calendaria.*

MICHAEL'S MOUNT, ST. (Cornwall), is considered by some to be the Iktis of Diodorus Siculus, and an ancient resort of the tin merchants. St. Michael was said to have appeared on the mount, 495 or 710; and the place, thus reputed holy, became the seat of a body of monks, who received a charter from Edward the Confessor, 1044, and many privileges from pope Gregory VII., 1079.

MICROBES, see *Germ*.

MICROMETER, an astronomical instrument used to measure any small distances and the minuter objects in the heavens, such as the apparent diameters of the planets, &c., was invented by Wm. Gascoigne, who was killed at the battle of Marston-moor, 2 July, 1644. It was improved by Huyghens about 1652. Sir Joseph Whitworth made a machine to measure the millionth of an inch, about 1858; the measurement of the 30,000th of an inch is now common.

MICROPHONE (Greek, *mikros*, little; *phōnē*, sound), a name given by Wheatstone, in 1827, to an instrument for rendering weak sounds audible by means of solid rods. The name was also given to an arrangement invented (in Dec. 1877) by professor D. E. Hughes (an American, an inventor of the printing telegraph), and shown to the Royal Society, 9 May, 1878.

An electric current is established between two moderately conducting bodies (such as pieces of charcoal, metallised by being plunged when heated into mercury) resting slightly upon each other, mounted on a piece of thin wood. If the contact is so made that one of the bodies may be easily displaced, minute sounds produced on the wood disturb the electric conductivity at the place of contact, and may be heard by the help of the telephone. The sonorous and electric waves are thus rendered synchronous, and become convertible. The tread of a fly sounds like that of a large quadruped. See *Telephone*.

MICROPHITE, a microscopic plant, especially parasitic; some physiologists consider bacteria and bacilli to be microphites, 1890.

MICROSCOPES, said to have been invented by Jansen, in Holland, about 1590; by Galileo, about 1610; by Fontana, in Italy, and by Drebbel, in Holland, about 1621. Those with double glasses were made at the period when the law of refraction was discovered, about 1624. Solar microscopes were invented by Dr. Hooke. In England great improvements were made in the microscope by Benjamin Martin (who invented and sold pocket microscopes about 1740), by Henry Baker, F.R.S., about 1763, and still greater during the present century by Wollaston, Ross, Jackson, Varley, Hugh Powell, and others. *Diamond microscopes* were made by Andrew Pritchard in 1824; and the properties of "test objects" to prove the qualities of microscopes, discovered by him and Goring in 1824-40. A *binocular microscope* (*i.e.*, for

two eyes), was constructed by professor Riddell in 1851, and Wenham's important improvements were made known in 1861. Treatises on the microscope by J. Quekett (1848), by Dr. W. B. Carpenter (1856 *et seq.*), by Dr. Lionel Beale (1858 *et seq.*), and Griffith and Henfrey's "Micrographic Dictionary" (1856, 1875, and 1883), are valuable. The Microscopical Society of London was established 20 Dec. 1839, and the Quekett Microscopical Club, 1865. In 1865 Mr. H. Sorby exhibited his *spectrum microscope*, by which the millionth of a grain of blood was detected.

MICRO-TASIMETER, a new instrument invented by Mr. T. A. Edison, in which he has applied the principle of the carbon microphone to the measurement of infinitesimal pressure; announced July, 1878. He proposes to apply the principle to delicate barometers, thermometers, hygrometers, &c.

Capt. Richard F. Burton explored the ruined cities of Midian in 1877, and found the remains of ancient mines, many relics, and gold. An expedition, equipped by the khedive of Egypt, and placed under his command, started from Suez, 10 Dec. 1877, and returned 20 April, 1878. He brought home 25 tons of geological specimens, specimens of silver and copper ore, many coins and other antiquities, and photographs of the remains of ruined cities, &c.

MIDWIFERY. Women were the only practitioners among the Hebrews and Egyptians. Hippocrates, in Greece, 460 B.C., is styled the father of midwifery, as well as of physic. It advanced under Celsus, who flourished A.D. 37, and of Galen, who lived 131. In England midwifery became a science about the period of the institution of the college of physicians, 10 Hen. VII. 1518. Dr. Harvey engaged in the practice of it, about 1603; Astruc affirms that madame de la Vallière, mistress of Louis XIV., in 1663, employed Julian Clement, a surgeon, with great secrecy.

MILLBANK PENITENTIARY, Westminster. The very unhealthy site was purchased of the Grosvenor family. The building, a modification of Jeremy Bentham's Panopticon (*which see*), first received convicts 27 June, 1816.

* This militia act was consequent upon the then prevailing opinion of the necessity of strengthening our national defences against the possibility of French invasion. The act empowered her majesty to raise a force not exceeding 80,000 men, of which number 50,000 were to be raised in 1852, and 30,000 in 1855; the quotas for each county or riding to be fixed by an order in council.

In consequence of many deaths during a great epidemic the convicts were placed in Woolwich hulks, 1822-3. On 16 June, 1843, a committee reported the penitentiary a failure. The system was abolished in parliament, and the building styled Millbank prison; made a military prison, 1870.

The buildings ordered to be pulled down and site sold, 1888.

It was finally closed 6 Nov. 1890.

Management of the site transferred to the board of works, by act passed in 1892.

He was afterwards restored to favour, and became secretary of state, 1776.

MINERALOGY, the science of minerals, is a branch of geology; see *Geology*, *Mines*, and *Crystallography*. It was not much studied by the ancients. George Agricola in the 16th century made the first attempt to treat it scientifically.

MINES. Strabo and Tacitus enumerate gold and silver as among the products of Britain. The earliest instance of a claim to a mine royal being enforced occurs 47 Hen. III. 1262. It related to mines containing gold, together with copper, in Devonshire. In Edward I.'s reign, according to Mr. Ruding, the mines in Ireland, which produced silver, were supposed to be so rich that the king directed a writ for working them to Robert de Ufford, lord justice, 1276. The lead mines of Cardiganshire, from which silver has ever since been extracted, were discovered by sir Hugh Middleton in the reign of James I.; see *Coal*, and the various metals. Average depth of mines (1891) 400 yards. Deep mines: Ashton Moss colliery, near Manchester, 2,850 ft.; part 3,000 ft.; copper mine, Calumet, near lake Superior, U.S., 3,900 ft. (1890); silver-lead mine, Przibram in Bohemia, 3,432 ft. *Chambers' Encyclopædia*, 1891.

MINIATURE PAINTING was practised in England by Holbein, Isaac, and Peter Oliver, and others in the 16th century; by other eminent artists since. The new Society of Miniature Painters, president, Mr. Alyn-Williams, opened its first exhibition at 175, New Bond-street, London, 23 Sept. 1896. "The Society of Miniaturists," president, lord Ronald Gower, 1st exhibition, at the Grafton Galleries, London, 14 Nov. 1896. Sir Wm. Ross, 1794–1860, may be said to be the last miniaturist.

MINIE RIFLE, invented at Vincennes, about 1833, by M. Minié (born 1810). From a common soldier he raised himself to the rank of chef d'escadron. His rifle, considered to surpass all made previous to it, was adopted by the French, and, with modifications, by the British, 1852.

MINIMIZERS. A name given to certain writers who advocate the limitation of the sovereign power of the state as much as possible to the protection of life and property, which is styled by professor Huxley "administrative nihilism." They include W. von Humboldt, J. S. Mill (in his "Essay on Liberty"), and Mr. Herbert Spencer (in his "Political Institutions"), 1882.

MINIMS (from *minimi*, the least), an order of monks, founded by S. Francisco di Paolo (1416—1507), in Calabria, received their name, as professing themselves inferior to the Minorites (from *minor*, less); see *Franciscans*. St. Francis died in France in 1507; where he had established houses of his order.

MINISTERS, see *Administrations*.

MINISTERS in Scotland: church patronage was abolished in 1874.

MINNESINGERS, lyric German poets, of the 12th and 13th centuries, who sang of love and war to entertain knights and barons of the time. The *Meistersingers*, their successors, an incorporated fraternity in the 14th century, composed satirical ballads for the amusement of the citizens and lower classes. Hans Sachs, a shoemaker (1494-1576), a poet of the reformation, was for a time their dean. His works were published at Nuremberg, 1560. "Owleglass" and "Reynard the Fox," are attributed to the Meistersingers.

MINNESOTA, a western state of N. America, was organised as a territory, 3 March, 1849, and admitted into the union in 1858. On 17 Aug. 1862, the Sioux Indians commenced a series of outrages at Acton in Messler county, desolating the country and massacring above 500 persons, of both sexes, and of all ages. General Sibley beat the Indians in two battles and rescued many captives. Thirty-eight Indians were executed as assassins. Capital, St. Paul.

MINORCA AND MAJORCA, the Balearic Isles (*which see*). Port Mahon in Minorca was captured by lieutenant-general Stanhope and sir John Leake in 1708, and was ceded to the British by the treaty of Utrecht in 1713. It was retaken by the Spanish and French in July, 1756, and admiral Byng fell a victim to public indignation for not relieving it; see *Byng*. It was restored to the British at the peace in 1763; taken 5 Feb. 1782; again captured by the British under general Stuart, without the loss of a man, 15 Nov. 1798; given up at the peace of Amiens, 25 March, 1802.

MINORITIES. In the new reform bill, passed 15 Aug. 1867, provision was made for the representation of minorities in constituencies with three members by limiting each elector to two votes. It was introduced as an amendment by lord Cairns in the lords, 30 July, and accepted by the commons, Aug. 1867. The principle was adopted in a new constitution by the state of Illinois, U.S., July, 1870. See *Proportional Representation*.

MINSTER, or MONASTERIUM, a place occupied by monks; see *Westminster* and *York*. "The Minster," an illustrated monthly magazine, supported by the archbishop of Canterbury, sir Benjamin Baker, and other eminent persons; No. 1, Jan. 1895.

MINSTRELS, originally pipers appointed by lords of manors to divert their copyholders while at work, owed their origin to the glee men or harpers of the Saxons, and continued till about 1560. John of Gaunt erected a court of minstrels at Tutbury in 1380. So late as the reign of Henry VIII. they intruded without ceremony into all companies, even at the houses of the nobility; but in Elizabeth's reign they were adjudged rogues and vagabonds (1597).

MINT. Athelstan enacted regulations for the government of the mint about 928. There were several provincial mints under the control of that of London. Henry I. is said to have instituted a mint at Winchester, 1125. Stow says the mint was kept by Italians, the English being ignorant of the art of coining, 7 Edw. I. 1278. The operators were formed into a corporation by the charter of king Edward III., in which condition it consisted of the warden, master, comptroller, assay-master, workers, coiners, and subordinates. The first entry of gold brought to the mint for coinage occurs in 18 Edw. III. 1343. Tin was coined by Charles II. 1684; and gun-metal and pewter by his successor James after his abdication. Sir Isaac Newton was warden, 1699-1727, during which time the debased coin was called in, and new issued at the loss of the government. Between 1806 and 1810, grants amounting to 262,000*l*. were made by parliament for the erection of the present mint, which was completed in 1810; it was injured by fire, 31 Oct. 1815. The new constitution of the mint, founded on the report of the hon. Wellesley Pole, took effect in 1817. Professor Thomas Graham, the master of the mint, died 16 Sept. 1869. By the Coinage Act, passed 4 April, 1870, the office was combined with that of the chancello[illegible] the ex-

chequer, the duties being transferred to the deputy-master (Sir C. W. Fremantle), K.C.B., 1 Jan. 1890; resigned, Sept. 1894; succeeded by Mr. Horace Seymour. After reorganization, the work was resumed, 8 Dec. 1882. See *Coin*.

MIRIDITES, or MIRDITES, see *Turkey*, 1877.

MIRRORS. In ancient times mirrors were made of metal; those of the Jewish women of brass. Mirrors of silver were introduced by Praxiteles 4th *century* B.C. Mirrors or looking-glasses were made at Venice, A.D. 1300; and in England, at Lambeth, near London, in 1673. The improvements in manufacturing plate-glass, and that of very large size, have cheapened looking-glasses very much. Various methods of coating glass by a solution of silver, thus avoiding the use of mercury, so injurious to the health of the workmen, have been made known; by M. Petitjean in 1851; by M. Cimeg in 1861, and by Liebig and others.

MISSIONARY BISHOPS, see under *Bishops*.

MISSIONS,* see *Mark* xvi. 15. Among the Romanists, the religious orders of St. Dominic, St. Francis, St. Augustin, &c., have missions to the Levant and to America. Marco Polo is said to have introduced missionaries into China, 1275. The Jesuits have missions to China (*which see*) and to most other parts of the world. Among the Protestants, an early undertaking of this kind was a Danish mission, planned by Frederick IV. in 1706. The Society for the Propagation of the Gospel in foreign parts was established 1701, and the Moravian Brethren encouraged missions about 1732. The London Missionary Society held their first meeting, 4 Nov. 1794 (1st mission sent to the South Sea Islands in the *Duff*, 1796); centenary celebrated, 15 Jan. 1895. Most Christian sects now support missions. *British Contributions to Foreign Missions:* 1871, 855,742*l.*; 1877, 1,100,793*l.* (in 1871-7, 6,977,586*l.*)

MISSISSIPPI, a great river, N. America, explored by De Soto about 1541. Captain Glazier discovered its source, 1884. Its length is now stated to be 2,960 miles. The Mississippi trade was begun in England, in Nov. 1716. Law's Mississippi scheme in France, commenced about the same period, exploded in 1720; at which time the nominal capital is said to have amounted to 100,000,000*l.* The ruin of thousands soon followed. See *Law's Bubble*.

It was taken 22 April, 1826, after a long siege. Here Lord Byron died, 19 April, 1824. A statue of Byron was unveiled here, 6 Nov. 1881. It was surrendered to the Greeks in 1829.

MISSOURI, a south-western state in N. America, was settled in 1763, and admitted into the union, 10 Aug. 1821. * MISSIONS, "a series of sermons, generally by a 'missioner,' or special preacher, often followed by confessions and communions" (a species of revivalism), were authorised in the metropolis by the bishops of London, Winchester, and Rochester, held 1869 and since.

MITHRIDATE, a medical preparation in the form of an electuary, supposed to be an antidote to poison and the oldest compound known, is said to have been invented by Mithridates, king of Pontus, about 70 B.C.

MITHRIDATIC WAR, caused by the massacre of 80,000 Romans, by Mithridates VI., king of Pontus, 88 B.C., and remarkable for its duration, its many sanguinary battles, and the cruelties of its commanders. Mithridates having taken the consul Aquilius, made him ride on an ass through a great part of Asia, crying out as he rode, "I am Aquilius, consul of the Romans." He is said to have killed him by causing melted gold to be poured down his throat, in derision of his avarice, 85 B.C. Mithridates was defeated by Pompey, 66 B.C.; and committed suicide, 63 B.C.

MITRAILLEUSE, or MITRAILLEUR, a machine-gun in which 37 or more large-bored rifles are combined with breech-action, by means of which a shower of bullets may be rapidly projected by one man. It was invented in Belgium, and adopted by the French emperor soon after the Prusso-Austrian war in 1866, and was much used in the Franco-Prussian war in 1870. Its peculiar "dry, shrieking, terrible sound" was described in the bombardment of Saarbrück, 2 Aug. 1870. Modifications of the mitrailleuse have been made by Montigny and others. The Fosbery mitrailleuse was tried and approved at Shoeburyness, 11 Aug. 1870.—It is mentioned in *Grose's Military Antiquities* (1801) that in England, in 1625, a patent was granted to William Drummond for a machine composed of a number of muskets joined together, by the help of which two soldiers can oppose a hundred, and named, on account of its effect, "thunder carriage," or more usually, "fire carriage." An English mitrailleuse, a modification of the American gatling, containing 50 cartridges, was tried at Woolwich, 18 Jan. 1872; fifty of them were ordered to be made by Armstrong.

MITRE. The cleft cap or mitre was worn by the Jewish high-priest, 1491 B.C. It had on it a golden plate inscribed "HOLINESS TO THE LORD." *Exodus* xxxix. 28. The most ancient mitre that has the nearest resemblance to the present one is that upon the seal of the bishop of Laon, in the 10th century. *Fosbroke.* Anciently the cardinals wore mitres, but at the council of Lyons, in 1245, they were directed to wear hats.

MITYLENE, or LESBOS, Ægean Sea. Near here the Greeks defeated and nearly destroyed the Turkish fleet, 7 Oct. 1824.

MOABITES, descendants of Lot, a people living to the south-east of Judæa. They were frequently at war with the Israelites, and were subdued with divine help by Ehud about 1336, by David about 1040, and by Jehoshaphat, 895 B.C., but often harassed the Jews in the decay of their monarchy. The discovery of a stone with inscription in Phœnician characters, said to relate to Mesha, king of Moab, referred to in 2 *Kings*, iii., was announced in Jan. 1870, and impressions were exhibited soon after, causing much discussion among orientalists, and its authenticity was doubted.

MÖCKERN (Prussia). Here the French army under Eugène Beauharnais were defeated by the Prussians under Yorck, 5 April, 1813; and here Blucher defeated the French, 16 Oct. 1813.

MODELS. The first were figures of living persons, and Dibutades, the Corinthian, is the reputed inventor of those in clay. His daughter, being about to be separated from her lover, traced his profile by his shadow on the wall; her father filled up the outline with clay, which he afterwards baked, and thus produced a figure of the object of her affection, giving rise to an art till then unknown, about 985 B.C.

A beautiful model of the new town of Edinburgh, before the building began, was formed in wood.

A model was made of a bridge over the Neva, of uncommon strength as well as elegance; and of the mountains of Switzerland, by general Pfiffer (1766-85).

M. Choffin's model of Paris also was remarkable for its precision.

Fine models of Gibraltar, Quebec, and other fortified places, are deposited in the Rotunda at Woolwich. See *Waxwork* and *Lodging-houses.*

MODENA (formerly Mutina), capital of the late duchy in Central Italy; was governed by the house of Este, from 1288 till 1796, when the last male of that house, the reigning duke Hercules III., was expelled by the French. By the treaty of Campo Formio, the Modenese possessions were incorporated with the Cisalpine republic, 1797, and with the kingdom of Italy, 1805. The archduke Francis of Este, son of the archduke Ferdinand of Austria, and of Mary, the heiress of the last duke, was restored in 1814. Modena, in accordance with the voting by universal suffrage, was annexed to Sardinia on 18 March, 1860. Population of the city, 1881, 31,053; of the province, 1881, 279,254, 1889, 303,541.

1846. Francis V. (born 1 June, 1819) succeeded 21 Jan. His subjects rose against him soon after the Italian war broke out, in April, 1859. He fled to Verona, establishing a regency, 11 June; which was abolished, 13 June; Farina was appointed dictator, 27 July; a constituent assembly was immediately elected, which offered the duchy to the king of Sardinia, 15 Sept., who incorporated it with his dominions, 18 March, 1860. Francis died, 20 Nov. 1875.

MODERADOS. A political party in Spain, long headed by Ramon Maria Narvaez, duke of Valencia (who died 23 April, 1868), who opposed the Progresistas headed by Espartero and Prim. The party was reinforced by the favourers of Don Carlos, after his total defeat in 1876.

MODERATES, opponents of the Progressives (*which see*).

MODOC INDIANS (a few hundreds), dwelling in lands south of Oregon, were removed to other lands by the United States government. Not obtaining subsistence, they returned to their old possessions, and their able leader captain Jack defeated the troops sent to expel them, 17 Jan. 1873. During negotiations for a peaceful settlement, they decoyed the United States commissioners into an ambush (11 April), and massacred general Canby and about 40 others. Fighting took place, 15, 16 April, and the Indians retreated to almost impregnable positions. The troops were fired on, and suffered much loss, 27 April. The Indians were

gradually surrounded. Jack and about twenty warriors held out desperately. Some surrendered, and he himself was captured, 1 June; tried, July, and executed 3 Oct. 1873.

MŒSIA (now Bosnia, Servia, and Bulgaria), was finally subdued by Augustus, 29 B.C. It was successfully invaded by the Goths, A.D. 250, who eventually settled here; see *Goths.*

MOHURRUM, a Mahometan festival in honour of the prophet's nephews: at its celebration in Bombay, Feb. 1874, the Mahometans fiercely attacked the Parsees, and were quelled by the military.

MOKANNA (Hakim ben Allah), "The Veiled," prophet, founder of a sect in Khorassan in the eighth century. He pretended to be an incarnation of God, and therefore veiled his face, but really to conceal the loss of an eye. He rebelled against the calif Almahdi, was for a time successful, but was subdued in 780, when he and the remains of his followers took poison. He is the subject of a poem by Thos. Moore in "Lalla Rookh," 1817.

MOLDAVIA, see *Danubian Principalities.*

MOLINISTS, a Roman Catholic sect, followers of Louis Molina, a Jesuit, born 1535. He maintained the reconcilability of the doctrines of predestination and free will, 1588.

MOLLY MAGUIRE, the name of a secret society in Ireland in 1843, and of another society (originally Buckshot, about 1853) in mining districts, United States (*which see*), 1877. It ceased about March, 1879.

The Dutch conquered them in 1607, and have held them ever since,—except from 1810 to 1814, when they were subject to the English. Earthquake at Amboina, the capital, almost destroyed and 50 persons killed, 5 Jan. 1898.

MOMBASA, chief town of the British East Africa territories; increasing prosperity reported, July, 1890. Kisawir, or Frere Town, is a thriving station of the Church Missionary society. See *Africa* (*British East*).

MONACHISM (from the Greek *monos*, alone). Catholic writers refer to the prophet Elijah, and the Nazarites mentioned in *Numbers*, ch. vi., as early examples. The first Christian ascetics appear to be derived from the Jewish sect of the Essenes, whose life was very austere, practising celibacy, &c. About the time of Constantine (306-22) numbers of these ascetics withdrew into the deserts, and were called *hermits*, *monks*, and *anchorets*;* of whom Paul, Anthony, and Pachomius were most celebrated. Simeon, the founder of the Stylitæ (or pillar saints), died 451. He is said to have lived on a pillar thirty years. St. Benedict, the great reformer of western monachism, published his rules and established his monastery at Monte Casino, about 529. The Carthusians, Cistercians, &c., are varieties of Benedictines. In 964, by decree of king Edgar, all married priests were ineffectually ordered to be replaced by monks. Religious orders expelled from France, by decree, 29 March, 1880. Relieved of their vows by the Pope, 1881. See *Abbeys*, and *Benedictines.*

MONACO, a principality, N. Italy, held by the Genoese family Grimaldi since 968. By treaty on 2 Feb. 1861, the prince ceded the communes of Roquebrune and Mentone, the chief part of his dominions, to France, for 4,000,000 francs. The prince, Charles III., born 8 Dec. 1818, succeeded his father Florestan, 20 June 1856; died 10 Sept. 1889, was succeeded by Albert, born 13 Nov. 1848. A commercial convention between the prince and France, signed 9 Nov. 1865, was much discussed as tending towards the abolition of the French navigation laws. Petitions against Monte Carlo, the great gaming establishment, 1880-4; a 50 years' concession granted, reported, March, 1896. Population, 1888, 13,304.

MORAVIA, an Austrian province, occupied by the Slavonians about 548, and conquered by the Avars and Bohemians, who submitted to Charlemagne. About 1000 it was subdued by Boleslas of Poland, but recovered by Ulrich of Bohemia in 1030. After various changes, Moravia and Bohemia were amalgamated into the Austrian dominions in 1526. Moravia was invaded by the Prussians in 1866, and they established their head quarters at Brünn, the capital, 13 July. The demand of the Moravians for home rule was resisted Oct. 1871. Strike of 30,000 coal miners at Ostrau, and rioting suppressed by military, 16, 17 April, 1890. Population in 1890, 2,276,870.

MORAVIANS, or UNITED BRETHREN said to have been part of the Hussites, who withdrew into Moravia in the 15th century; but the brethren assert that their sect was derived from the Greek church in the 9th century. In 1722 they formed a settlement (called *Herrnhut*, the watch of the Lord) on the estate of count Zinzendorf. Their church consisted of 500 persons in 1727. They were introduced into England by count Zinzendorf about 1738; he died at Chelsea in June, 1760. In 1851 they had thirty-two chapels in England. They are zealous missionaries, and founded settlements in foreign parts, about 1732. London Association founded, 1817. Mr. Thos. Morton, a British merchant, who died 11 Sept. 1897, bequeathed a large sum, conditionally, to the Moravians.

MORGANATIC* MARRIAGES, when the left hand is given instead of the right, between a man of superior and a woman of inferior rank, in which it is stipulated that the latter and her children shall not enjoy the rank or inherit the possessions of the former. The children are legitimate. Such marriages are frequently contracted in Germany by royalty and the higher nobility. It has been asserted that our George I. was thus married to the duchess of Kendal; the late duke of Sussex to lady Cecilia Underwood; Frederic VI. of Denmark to the countess of Danner, 7 Aug. 1850; and several Austrian princes, recently.

MORMONS (calling themselves the Church of Jesus Christ of *the* LATTER-DAY SAINTS). This sect derives its origin from Joseph Smith, called the Prophet, who announced in 1823, at Palmyra, New York, that he had had a vision of the angel Moroni. In 1827 he said that he found the book of Mormon, written on gold plates in Egyptian characters. This book is said to have been written about 1812, by a clergyman named Solomon Spaulding (or by Martin Harris, who died Sept. 1875), as a religious romance in imitation of the scripture style. It was translated and published in America in 1830, in England in 1841. It fell into the hands of Rigdon and Smith, who determined to palm it off as a new revelation. The Mormons command the payment of tithes, permit polygamy, encourage labour, and believe in their leaders working miracles. Missionaries are propagating these doctrines in Europe with more success than would be expected.

On 19 Oct. 1857, a colossal mortar, constructed by Mr. Robert Mallet, was tried at Woolwich; with a charge of 70 lbs. it threw a shell weighing 2550 lbs. 1½ mile horizontally, and about ¾ mile in height.

MORTMAIN ACTS (*mort main*, dead hand). When the survey of all the land in England was made by William I., 1085-6, the whole was found to amount to 62,215 knights' fees, of which the church then possessed 28,015, to which additions were afterwards made, till the 7th of Edward I., 1279, when the statute of mortmain was passed, from a fear that the estates of the church might grow too bulky. By this act it was made unlawful to give any estates to the church without the king's leave; and this act, by a supplemental provision, was made to reach all lay-fraternities, or corporations, in the 15th of Richard II., 1391. Mortmain being such a state of possession as makes property inalienable, it is said to be in a dead hand. Several statutes have been passed on this subject; legacies by mortmain were especially restricted by the 9th Geo. II., c. 36 (1736). Law consolidated and amended 1888; 1891, 1892.

MOSAIC WORK (the Roman *opus tessellatum*), is of Asiatic origin, and is probably referred to in *Esther*, ch. i. 6, about 519 B.C. It had attained to great excellence in Greece, in the time of Alexander and his successors, when Sosos of Pergamus, the most renowned Mosaic artist of antiquity, flourished. He acquired great fame by his accurate representation of an "unswept floor after a feast." The Romans also excelled in Mosaic work, as evidenced by the innumerable specimens preserved. Byzantine Mosaics date from the 4th century after Christ. The art was revived in Italy by Tafi, Gaddi, Cimabue, and Giotto, who designed Mosaics, and introduced a higher style in the 13th

century. In the 16th century Titian and Veronese also designed subjects for this art. The practice of copying paintings in Mosaics came into vogue in the 17th century; and there is now a workshop in the Vatican where chemical science is employed in the production of colours, and where 20,000 different tints are kept. In 1861, Dr. Salviati of Venice had established his manufacture of "Enamel-mosaics," and in July, 1864, he fixed a large enamel Mosaic picture in one of the spandrils under the dome of St. Paul's cathedral, London. He has since executed commissions for the queen and other persons. He died Feb. 1890, aged 74. See *Paul's, St.*, 1896.

MOSQUITO COAST (Central America). The Indians inhabiting this coast were long under the protection of the British, who held Belize and a group of islands in the bay of Honduras. The jealousy of the United States long existed on this subject. In 1855 the United States charged the British government with an infraction of the treaty; on which the latter agreed to cede the disputed territory to the republic of Honduras, with some reservation.* The matter was finally settled in 1859.

MOURNING FOR THE DEAD. The Israelites neither washed nor anointed themselves during the time of mourning, which for a friend lasted seven days; upon extraordinary occasions a month or more. The Greeks and Romans fasted. White was used in mourning for the imperial family at Constantinople, 323. The ordinary colour for mourning in Europe is black; in China, white; in Turkey, violet; in Ethiopia, brown; it was white in Spain until 1498. Anne of Brittany, the queen of two successive kings of France, mourned in black, instead of the then practice of wearing white, on the death of her first husband, Charles VIII., 7 April, 1488. *Hénault.*

MULBERRY-TREES. The alleged first planted in England are in the gardens of Sion-house. Shakspeare is said to have planted a mulberry-tree with his own hands at Stratford-upon-Avon; and Garrick, Macklin, and others were entertained under it in 1742. Shakspeare's house was afterwards sold to a clergyman of the name of Gastrel, who cut down the mulberry-tree for fuel, 1765. A silversmith purchased the whole, and manufactured it into memorials.

MULE, a spinning machine invented in 1779, by Samuel Crompton, born at Bolton, Lancashire, in 1753; named, from Crompton's residence, *Hall-in-the-wood-wheel;* and *muslin-wheel*, from its giving birth to the British muslin and cambric manufacture; and *mule*, from its combining the advantages of Hargreave's spinning jenny, and Arkwright's adaptation. It is stated that Crompton at the time knew nothing of the latter. He did not patent his invention, but gave it up in 1780 to the public. It produced yarn treble the fineness and very much softer than any ever before produced in England. Parliament voted him 5000*l.* in 1812, now considered a most inadequate compensation. Mr. Roberts invented the *self-acting mule* in 1825.

Lethieullier; two others came in 1734, one of which was retained by Dr. Mead, the other was given to the College of Physicians. In 1834, Mr. T. J. Pettigrew published a "History of Egyptian Mummies." The discovery of about 39 mummies of kings, priests, and other eminent persons in sarcophagi at Renneh, near Thebes, Upper Egypt, was announced in Aug. 1881, supposed to be of the 21st dynasty, about 1100 B.C.

MURDER, the highest offence against the law of God. (*Genesis* ix. 6, 2348 B.C.) A court of Ephetæ was established by Demophoön of Athens for the trial of murder, 1179 B.C. The Persians did not punish the first offence. In England, during a period of the heptarchy, murder was punished by fines only. So late as Henry VIII.'s time the crime was compounded for in Wales. Murderers were allowed benefit of clergy in 1503. Aggravated murder, or *petit treason* (a distinction now abolished), happened in three ways: by a servant killing his master, a wife her husband, and an ecclesiastical person his superior, stat. 25 Edw. III. 1350. The enactments relating to this crime are very numerous, and its wilful commission has been rarely pardoned by our sovereigns. The act whereby the murderer should be executed on the day next but one after his conviction, was repealed, 1836; see *Assassinations*, *Executions*, *Trials*; also *London*, 1872, *Bravo*, *Burton*, *Euston*, *Ratcliffe*, *Road*, *Richmond*, *Harley Street*, *Whitechapel*, *Poisoning*; *Railways*, 1864 and 1881; *Slough*, *Melbourne.*

MUSIC.* "Jubal, the father of all such as handle the harp and the organ" (3875 B.C. *Gen.* iii. 21). The flute, and harmony, or concord in music, are said to have been invented by Hyagnis, 1506 B.C. *Arund. Marbles.* Vocal choruses of men are first mentioned 556 B.C., see *Athens. Dufresnoy.* See *Organ*, and other musical instruments. Prior to 1600, the chief music in England was masses, ballads, and madrigals, but dramatic music was much cultivated from that time. About the end of James I.'s reign, a music professorship was founded in the university of Oxford by Dr. Wm. Hychin; and the year 1710 was distinguished by the arrival in England of George Frederick Handel. Mozart came to England in 1763; Joseph Haydn in 1791; and Carl Maria von Weber in 1825.

The Italian style of composition was introduced into these countries about 1616.
The Musical Pitch was settled in France in 1859. The middle A to be 870 simple or 435 double vibrations in a second; but through error of measurement the fork made gave (A) 439 double vibrations (C, 522). At a meeting on the subject, held at the Society of Arts, on 23 Nov. 1860, the concert pitch of C was recommended to be 528 vibrations in a second; but the fork made by Mr. J. H. Griesbach gives 539⅔ vibrations. Mr. Hullah adopted 512 vibrations.
A lower pitch was adopted at concerts in London in Jan. 1869. 528 vibrations for C adopted for performances at the international exhibition of 1872, at a meeting, 20 Jan. 1872.
[Handel's tuning-fork, 1740, was 495; the Philharmonic Society's, 1813-43, was 515.]

Until the year 1753, the festival lasted only two days; it was then extended at Hereford to three evenings; and at Gloucester, in 1757, to three mornings, for the purpose of introducing Handel's "Messiah," which was warmly received, and has been performed annually ever since. Study of music greatly increased by the efforts and teaching of John Hullah since 1840 *et seq.*
The Tonic *sol-fa* system, in which the letters *d, r, m, f, s, l, t,* (for *do, re, mi, fa, so, la, ti,* or *si*) are used instead of notes, was invented by Miss Glover, of Norwich, and improved by rev. John Curwen, about 1841; he died 1880.

MYSTERIES, derived from the Greek *musterion*, a mystery or revealed secret. The *Sacred* mysteries is a term applied to the doctrines of Christianity, called the "mystery of godliness," 1 *Tim.* iii. 16, as opposed to the "mystery of iniquity," 2 *Thess.* ii. 7. The Holy Eucharist is also termed the sacred mysteries. The *Profane* mysteries were the secret ceremonies performed by a select few in honour of some deity. From the Egyptian mysteries of Isis and Osiris sprang those of Bacchus and Ceres among the Greeks. The Eleusinian mysteries were introduced at Athens by Eumolpus, 1356 B.C.—MYSTERY PLAYS; see *Drama.*

MYSTICS, a name given to those theologians who, in addition to the obvious meaning of the Holy Scriptures, assert that there are interpretations to be discovered by means of an emanation of the Divine Wisdom, by which the soul is enlightened and purified; for which purpose they advocate seclusion for contemplation and asceticism.

Mysticism taught at Alexandria by Clemens, Pantænus, Origen, and others, who mingled Christianity and Platonism, 2nd and 3rd centuries.
Much promoted by the works of the pseudo-Dionysius ("The Mystic Theology," &c), 6th century.
Introduced into the Western empire, 9th century.
Eminent Mediæval mystics (opposed by the schoolmen) Master Eckhart (1251-1329); John Tauler of Strasburg, where he acted heroically during the plague, termed the "black death" (1290-1361); Henry Suso (1300-65). They aimed at a more spiritual religion than Romanism; but their followers were charged with immorality, pantheism, communism, and maintaining private inspiration.
Jacob Böhme or Behmen, the German mystic, published his "Aurora" (an alleged divine revelation) 1612; died, 18 Nov. 1624.
For modern mystics, see *Quakers, Quietists, Hutchinsonians* and *Swedenborgians.*

NABONASSAR, ERA OF, received its name from the prince of Babylon, under whose reign astronomical studies were much advanced in Chaldæa. The years contain 365 days each, without intercalation. NAG'S HEAD STORY. Matthew Parker was consecrated archbishop of Canterbury at Lambeth, 17 Dec. 1559, by bishops Barlow, Coverdale, Scory, and Hodgkins. For forty-five years after, the Romish writers asserted that Parker and others had been ordained in an abnormal fashion by Scory at the Nag's Head Tavern, Cheapside. This fiction was refuted by Burnet, and is rejected by Roman Catholic authorities, such as Lingard.

A Roman citizen had generally three names; *prænomen*, denoting the individual; *nomen*, the gens or clan; *cognomen*, the branch of the clan: sometimes he had the *agnomen* (*e. g.*, Publius Cornelius Scipio Africanus). The popes change their names on their exaltation to the pontificate, "a custom introduced by pope Sergius, whose name till then was Swine-snout," 687. *Platina.* Onuphrius (followed by most of the modern authorities), refers it to John XII., 956; stating that it was done in imitation of SS. Peter and Paul, who were first called Simon and Saul. In France the name given at baptism was sometimes changed. The two sons of Henry II. of France were christened Alexander and Hercules; at their confirmation these names were changed to Henry and Francis. Monks and nuns, at their entrance into monasteries, assume new names. See *Surnames.* Miss Yonge's "History of Christian Names," published 1863 (new edition 1884). M. A. Lower's "Patronymica Britannica," 1860.

NAPIER'S BONES, see *Logarithms.*

NAPLES, formerly the continental division and seat of government of the kingdom of the Two Sicilies, began with a Greek colony named Parthenope (about 1000 B.C.), which was afterwards

divided into Palæopolis (the *old*) and Neapolis (the *new* city); from the latter the present name is derived. The colony was conquered by the Romans in the Samnite war, 326 B.C. Naples, after resisting the power of the Lombards, Franks, and Germans, was subjugated by the Normans under Roger Guiscard, king of Sicily, A.D. 1131. Few countries have had so many political changes, and cruel and despotic rulers, or suffered so much by convulsions of nature, such as earthquakes, volcanic eruptions, &c. The eldest son of the king of Italy is styled prince of Naples. In 1856, the population of the kingdom of Naples was 6,886,030, of Sicily 2,231,020; total, 9,117,050. It now forms part of the revived kingdom of Italy. Population of the province in 1889, 1,060,032; of the city in 1890, 530,872.

NATIONAL ASSEMBLY, FRENCH. Upon the proposition of the abbé Siéyès, the states-general of France constituted themselves the National Assembly, 17 June, 1789. On the 20th the hall of this new assembly was shut by order of the king; upon which the deputies of the *Tiers Etat* repaired to the *Jeu de Paume*, or Tennis-court, and swore not to dissolve until they had digested a constitution for France. On the 22nd they met at the church at St. Louis. This assembly abolished the state religion, annulled monastic vows, divided France into departments, sold the national domains, established a national bank, issued assignats, and dissolved itself 21 Sept. 1792; see *National Convention*. In 1848 the legislature was again termed the National Assembly. It met 4 May, and a new constitution was proclaimed, 12 Nov. A new constitution was once more proclaimed by Louis Napoleon in Jan. 1852, after dissolving the National Assembly, 2 Dec. 1851. The present French National Assembly was elected 8 Feb., and met 12 Feb. 1871; new constitution adopted, 25 Feb. 1875; see *France*.

NATIONAL ASSOCIATIONS. One was formed in 1584, headed by the earl of Leicester, to protect queen Elizabeth from assassination, in consequence of the discovery of various plots. Another was proposed in the house of commons, in Feb. 1696, by sir Rowland Gwyn, for the defence of the person and government of William III. soon after the discovery of the assassination plot (*which see*). The members of both houses of parliament, and the majority of the male population, joined it immediately; all persons holding office under government were required to be members; see *Aid to Sick and Wounded*, *Artillery*, *Arts*, *Colonies*, *Employers*, *Farmers*, *Social Science*, and *Volunteers* for other national associations.

NATIONAL CONVENTION OF FRANCE, constituted in the hall of the Tuileries 17 Sept. and formally opened 21 Sept. 1792, when M. Grégoire, at the head of the National Assembly, announced that that assembly had ceased its functions. It was then decreed, "That the citizens named by the French people to form the National Convention, being met to the number of 371, after having verified their powers, declare that the National Convention is constituted." This convention continued until a new constitution was organised, and the Executive Directory was installed at the Little Luxembourg, 1 Nov. 1795; see *Directory*. The Chartists (*which see*) in England formed a National Convention in 1839.

NATIONAL DEBT. In 1693 an excise act was passed, granting duties for carrying on the war with France; the act also secured certain recompenses and advantages to such persons as should collectively advance 1,000,000*l.* for the same purpose; this sum was speedily subscribed. The permanent debt began by the establishment of the Bank of England in 1694, mainly through the exertions of Charles Montague, afterwards earl of Halifax, under the condition of its lending money to the government on interest, the repayment of the principal not to be demanded. The rapid growth of the debt was mainly caused by foreign wars, and its reduction was continually demanded. See *Stocks*, *Sinking Fund*, and *Local Loans*. Debts of the metropolitan authorities by loans, reported by Mr. Cosmo Rose-Innes (*Times*, 24 Oct. 1895), about 38,500,000*l.*, yearly charge about 2,500,000*l.* Mr. H. C. NATIONAL GUARD OF France was instituted by the Committee of Safety at Paris on 13 July, 1789 (the day before the destruction of the Bastile), to maintain order and defend the public liberty. Its first colours were blue and red, to which white was added, when its formation was approved by the king. Its action was soon para-

lysed by the revolution, and it ceased altogether under the consulate and empire. It was revived by Napoleon in 1814, and maintained by Louis XVIII., but was broken up by Charles X., after a tumultuous review in 1827. It was revived in 1830, and helped to place Louis Philippe on the throne. In 1848 its reconstitution and its enlargement from 80,000 to 100,000 men led to the frightful conflict of June, 1848. Its constitution was entirely changed in Jan. 1852, when it was subjected entirely to the control of the government. Formerly it had many privileges, such as choosing its own officers, &c. In consequence of the defection of part of the National Guard and the incompetency of the rest during the outbreak in Paris in 1871, its gradual abolition was decreed by the national assembly at Versailles (488-154), 24 Aug. 1871. The peaceful disarmament began in September. National Guards have been established in Spain, Naples, and other countries, during the present century.

NATIVITY. There are three festivals in the Roman and Greek churches, under this name. The Nativity of Christ, also observed by the Protestants, on 25 Dec. (see *Christmas*); the Nativity of the Virgin Mary, not observed by the Protestants at all. Pope Sergius I., about 690, established the latter, but it was not generally received in France and Germany till about 1000; nor by the eastern Christians till the 12th century. The festival of the nativity of St. John the Baptist, 24 June, Midsummer-day, is said to have been instituted in 488.

NATURAL HISTORY was studied by Solomon, 1014 B.C. (1 *Kings* iv. 33); Aristotle (384-322 B.C.); by Theophrastus (394-297 B.C.); and by Pliny (23-79 A.D.); see *Botany, Zoology,* &c.

NATURAL PHILOSOPHY, see *Philosophy.*

NATURAL SELECTION, see *Species.*

NATURALIZATION is defined to be "the making a foreigner or alien a denizen or freeman of any kingdom or city, and so becoming, as it were, both a subject and a native of a king or country that by nature he did not belong to." The first act of naturalisation passed in 1437; and various similar enactments were made in most of the reigns from that time; several of them special acts relating to individuals. An act for the naturalisation of the Jews passed May, 1753, but was repealed in 1754, on the petition of all the cities in England; see *Jews*, for the privileges since granted them. The act for the naturalization of prince Albert passed 3 Vict., 7 Feb. 1840. A committee to inquire into the naturalization laws, appointed May, 1868, earl of Clarendon chairman, met 25 Oct. 1868; reported about Feb. 1869; and new acts for this purpose were passed 12 May, 1870, and 25 July, 1872. In 1870 there were about 9500 Americans in England, and about 2,500,000 British subjects in the United States of America. By the new act the latter were enabled to renounce their allegiance; and by the convention signed 3 Feb. 1871, the nationality of British subjects was made dependent on choice and not on birth. Naturalization (abroad) act passed, 6 July, 1895.

NATURALISM, a realistic style in literature, mainly introduced by Balzac, 1829, *et seq.* "Naturalism" is now defined as the knowledge of phenomena, and the laws by which they are connected, but nothing more. Some writers combine with naturalism, agnosticism, positivism, and empiricism (*which see*).

Edmond and Jules de Goncourt published "Medical and Physiological Novels," 1846, *et seq.*

Emile Zola, in his "Rougon-Macquart" series, 1871, *et seq.*, portrayed deformed and diseased rather than true nature. A dramatised form of his "Assommoir," entitled "Drink," had a long run in London in 1879.

NATURE, a weekly illustrated journal of science, first appeared 4 Nov. 1869; editor, Mr. Joseph Norman Lockyer, F.R.S. Mr. Alex. Macmillan, one of the founders, born 1818, died, 25 Jan. 1896.

The French publication, *La Nature*, appeared in 1892.

NATURE PRINTING. This process consists in impressing objects, such as plants, mosses, feathers, &c., into plates of metal, causing these objects, as it were, to engrave themselves; and afterwards taking casts or copies fit for printing from. Kniphoff of Erfurt, between 1728 and 1757, produced his *Herbarium vivum* by pressing the plants themselves (previously inked) on paper; the impressions being afterwards coloured by hand. In 1833, Peter Kyhl, of Copenhagen, made use of steel rollers and lead plates. In 1842 Mr. Taylor printed lace. In 1847 Mr. Twining printed ferns, grasses, and plants; and in the same year Dr. Branson suggested the application of electrotyping to the impressions. In 1849, professor Leydolt, of Vienna, by the able assistance of Mr. Andrew Worring, obtained impressions of agates and fossils. The first practical application of this process is in Von Heufler's work on the Mosses of Arpasch, in Transylvania; the second (the *first* in this country) in "The Ferns of Great Britain and Ireland," edited by Dr. Lindley, the illustrations to which were prepared under the superintendence of Mr. Henry Bradbury in 1855-56, who also in 1859-60 printed "The British Sea-weeds," edited by W. G. Johnstone and Alex. Croall. The process was applied to butterflies by Joseph Merrin of Gloucester, in 1864.

NAVARINO (S. W. Greece), settled by the Arabs 6th century; taken by the Turks, 1500; by Venetians, 1686; by Turks, 1718; by Greeks, 1821; by Turks, 1825. Near here, on 20 Oct. 1827, the combined fleets of England, France, and Russia, under command of admiral Codrington, nearly destroyed the Turkish and Egyptian fleet. More than thirty ships, many of them four-deckers, were blown up or burnt, chiefly by the Turks themselves, to prevent their falling into the hands of their enemies. This destruction of the Turkish naval power was characterised by the duke of Wellington as an "untoward event." The port is also called Navarine.

NAVARRE, now a province of Spain, formed a part of the Roman dominions, and was conquered from the Saracens by Charlemagne, 778. His descendants appointed governors, one of whom, Garcias Ximenes, took the title of king in 857. In 1076, king Sancho IV. was poisoned, and Sancho Ramorez of Aragon seized Navarre. In 1134, Navarre became again independent under Garcias Ramorez IV. In 1234, Thibault, count of Champagne, nephew of Sancho VII., became sovereign of Navarre; and in 1284, by the marriage of the heiress Jane with Philip IV. le Bel, Navarre was united to France.

NAVIGATION LAWS. A code of maritime laws is attributed to Richard I. of England, said to have been decreed at the isle of Oleron, 1194, and further enactments were made by Richard II. in 1381.—In Oct. 1651, the parliament passed an act entitled "Goods from foreign parts, by whom to be imported," the principles of which were affirmed by 12 Charles II. c. 18, "an act for the encouraging and increasing of shipping and navigation" (1660). The latter act restricts the importation and exportation of goods from or to Asia, Africa, or America, to English ships, of which the masters and three-fourths of the mariners are to be English. This was followed by many acts of similar tenor; which were consolidated by 3 & 4 Will. IV. c. 54 (1833). These acts were in the whole or in part repealed by the act "to amend the laws in force for the encouragement of British shipping and navigation" (passed 12 & 13 Vict. c. 29, 26 June, 1849, after much opposition), and which came into operation 1 Jan. 1850. The steam navigation act passed 14 & 15 Vict. c. 79, 1851, came into operation 1 Jan. 1852. The act regulating the navigation of the river Thames was passed in 1786.—In Feb. 1865 the emperor recommended the modification of the French navigation laws; in Feb. 1872, new restrictions were laid upon foreign ships, chiefly affecting British.

NAVIGATORS (or Navvies). These helpers in the construction of railways probably derived their name (about 1830) from formerly making the inland navigation in Lincolnshire, &c., and are doubtfully said to be descendants of the original Dutch canal labourers. Navvy Mission Society (new) met at Lambeth palace, 7 May, 1880. A "steam navvy" suitable for working in sand, gravel, or heavy clay, made by Messrs. Ruston, Proctor, & Co., of Lincoln, 1878.

NAVAL SALUTE TO THE BRITISH FLAG began in Alfred's reign, and though sometimes disputed, may be said to have been continued ever since. The Dutch agreed to strike to the English colours in the British seas, in 1673. The honour of the flag salute at sea was also formally assented to by France in 1704, although it had been long previously exacted by England; see *Flag* and *Salutes at Sea*.

NAVAL UNIFORMS. The first notice of the establishment of a uniform in the British naval service, which we have met with, occurs in the *Jacobite's Journal* of 5 March, 1748, under the head of "Domestic News," in these terms:—"An order is said to be issued, requiring all his majesty's sea-officers, from the admiral down to the midshipman, to wear a uniformity of clothing, for which purpose pattern coats for dress suits and frocks for each rank of officers are lodged at the Navy-office, and at the several dockyards for their inspection." This is corroborated by the *Gazette* of 13 July, 1757, when the first alteration in the uniform took place, and in which a reference is made to the order of 1748, alluded to in the journal above mentioned, and which in fact is the year when a naval uniform was first established. James I. had in deed granted, by warrant of 6 April, 1609, to six of his principal masters of the navy, "liverie coats of fine red cloth." The warrant is stated to have been drawn *verbatim* from one signed by queen Elizabeth, but

which had not been acted upon by reason of her death. This curious document is in the British Museum; but king James's limited red livery is supposed to have been soon discontinued.—*Quarterly Review.* An act respecting them was passed in 1894.

NAVY PAY OFFICE, organised in 1644, was abolished in 1836, when the army and navy pay departments were consolidated in the Paymaster General's office.

NAVY LIST was first officially compiled by John Finlaison, the celebrated actuary, and published monthly in 1814 *et seq.*; Lean's "Royal Navy List" is published quarterly.

NAVAL REVIEWS. The queen reviewed the fleet at Spithead, near Portsmouth, 11 Aug. 1853; again, March, 1854, before it sailed to the Baltic, at the commencement of the Russian war; and again, at Portsmouth, on the conclusion of peace, in the presence of the parliament, &c. The fleet extended in an unbroken line of 5 miles, and consisted of upwards of 300 men-of-war, carrying 3800 guns, and manned by 40,000 seamen. There were about 100,000 spectators, 23 April, 1856.

A grand naval review (15 great wooden ships, 15 iron-plated, 16 gun-vessels and boats), was held at Spithead (the queen, the sultan, and the viceroy of Egypt present), 17 July, 1867; another at Spithead before the shah of Persia, 23 June, 1873; another at Spithead by the queen, (10 broadside ships, 8 turret ships, &c.,) 3 Aug. 1878; another at Portsmouth, the queen and colonial visitors present (at the expense of the officers), 23 July, 1886.

Grand unexampled naval review (jubilee) by the queen at Spithead, 23 July, 1887; 135 vessels of all kinds, including 26 ironclads, 20,200 officers and men; one man died through the bursting of a saluting gun. DIAMOND JUBILEE review at Spithead; the prince of Wales, the royal family, and foreign visitors present: 165 British warships in 4 lines, 5 mi. in length, between Portsmouth and the Isle of Wight; outside them, 2 lines of foreign warships, and special merchant vessels with guests; illuminations, &c. at night, 26 June, 1897.

NAVAL VOLUNTEERS (or *Reserve*). By 16 & 17 Vict. c. 73 (1853), the admiralty were empowered to raise a body of sea-faring men to be called the "Naval Coast Volunteers," not to exceed 10,000, for the defence of the coast, and for actual service if required. In 1859, acts were passed to enable the admiralty to raise a number of men, not exceeding 30,000, as a reserve force of seamen, to be called the "Royal Naval Volunteers." In November following, the admiralty issued a statement of the "qualifications, advantages, and obligations" of this reserve. The enrolment commenced on 1 Jan. 1860. The engagement is for five years, and the volunteers are entitled to a pension when incapacitated after the expiration of the term. At the prospect of war with the United States in Dec. 1861, a great number of seamen at Hartlepool, Dundee, London, Aberdeen, &c., offered their services. About 24,000 men, in 1896. Naval reserve act passed, 14 Aug. 1896.

First enrolled body of Royal Naval Volunteers inspected, about 18 Jan. 1873.

THE NAVY LEAGUE, established in 1894, to secure, as a primary object of the national policy, "the command of the sea," and to spread valuable information by means of publications, lectures, &c.; the late adm. sir Geoffrey Hornby, first president. No. 1 of the journal published July, 1895; appeal to the colonies for support responded to by the Cape, *Times* leader, 12 Oct. 1895; annual meetings.

NAVY OF FRANCE. It is first mentioned in history, 728, when, like that of England at an early period, it consisted of galleys; in this year the French defeated the Frisian fleet. The French fleet was almost annihilated by Edward III. at the battle of Sluys, 24 June, 1340. It was considerably improved under Louis XIV. at the instance of his minister Colbert, about 1697. The French navy was in its splendour about 1781; became greatly reduced in the wars with England; see *Naval Battles.* It was greatly increased by the emperor Napoleon III., and in 1859 consisted of 51 ships of the line (14 sailing vessels and 37 steamers), and 398 other vessels, in all 449; including vessels building, converting, or ordered to be built. The new French iron-clad frigate *Gloire*, constructed by M. Dupuy de Lôme, launched in 1860, was generally considered as successful. The *Solferino* and *Magenta* were launched in June, 1861; other iron vessels since. The *Magenta* was destroyed by fire, 6 killed, 31 Aug. 1875. The *Devastation*, a great iron-clad, launched at Lorient, 19 Aug. 1879. France had 22 battleships, 11 armoured vessels for coast defence, besides gun boats, cruisers and torpedo boats; in all 256 vessels in 1888. The Supreme Navy Council was created by decree, 6 Dec. 1889. See under *Fleets.*

NEBULÆ, the luminous cloudlike mist visible to the naked eye in some constellations, such as Orion, in others only by powerful telescope; much studied by astronomers, and formerly considered to be clusters of stars. Halley gave a list of 6 nebulæ, with a theory, in 1716. Messier, in 1784, gave 103. Sir Wm. Herschel discovered more than 2,500, and sir John Herschel more than 2,000; 7,840 known up to 1887; Dr. Dreyer's index catalogue gives 1,529, published total, 9,369, 1895.

The *Nebular Hypothesis* put forth by Laplace in his "Systeme du Monde," 1796, supposed that the solar system was evolved mechanically from a vast diffused revolving nebula, and that nebulæ were the early stages in the formation of planets and their satellites, by cooling, condensation, and contraction. This theory was adopted by sir William Herschel, and though at first opposed, is now generally accepted in a modified form. Mr. Lassell scrutinized the dumb-bell nebula in Orion, and reported that the bright parts did not appear to be stars, Oct. 1860. Dr. Wm. Huggins reported his analyses of certain nebulæ by their spectra, and believed them to be gaseous, 1865.

For Mr. Norman Lockyer's theory see under *Meteors*, 17 Nov. 1887.

NEEDLES. "The making of Spanish needles was first taught in England by Elias Crowse, a German, about the eighth year of queen Elizabeth, and in Queen Mary's time there was a negro who made

fine Spanish needles in Cheapside, but would never teach his art to any."—*Stow*. The manufacture was greatly improved at Whitechapel, London; Redditch, in Gloucestershire, and Hathersage, in Derbyshire. An exhibition of ancient needlework was formed at South Kensington Museum in 1873.

NEEDLE-GUN (*Zündnadelgewehr*), a musket invented by J. N. Dreyse of Sœmmerda, about 1827, and made a breech-loader in 1836, which was adopted by the Prussian general Manteuffel about 1846. It was found to be a most effective weapon in the war with Denmark in 1864, and in that with Austria in 1866. The ignition of the charge is produced by a fine steel rod or needle being pressed through the cartridge. The principle is claimed for James Whitley, of Dublin, 1823; Abraham Mosar, 1831; and John Hanson, of Huddersfield, 1843.

NEPAUL (N. India) was conquered by the Ghoorkas, 1768, who made treaties with the British, 1791 and 1801; but frequently made incursions; and in consequence war with them commenced 1 Nov. 1814; terminated 27 April, 1815. A treaty of peace was signed between the parties, 2 Dec. 1815. War was renewed through an infraction of the treaty by the Nepaulese, Jan. 1816; and after several contests, unfavourable to the Nepaulese, the former treaty was ratified, 15 March, 1816. An extraordinary embassy from the king of Nepaul to the queen of Great Britain arrived in England, landing at Southampton, 25 May, and remained till Aug. 1850; it consisted of the Nepaulese prince, Jung Bahadoor, and his suite, to whom many honours were paid. NEPHOSCOPE (*nephos*, Greek, a cloud). An apparatus for measuring the velocity of clouds, invented by Karl Braun, and reported to the Academy of Sciences, Paris, 27 July, 1868.

NEPTUNE, a primary planet, first observed on 23 Sept. 1846, by Dr. Galle, at Berlin, in consequence of a letter from M. Le Verrier, who had conjectured from the anomalous movements of Uranus that a distant planet might exist nearly in the position where Neptune was situated. Calculations to the same effect had been previously made by Mr. J. Couch Adams, of Cambridge; but unfortunate delays occurred in their publication, and also of professor Challis's consequent discovery of the planet. The Royal Society of London awarded its gold medal to both astronomers as equals in the theoretical discovery. A satellite of Neptune was discovered by Mr. Lassell on 10 Oct. following. Neptune is said to have been seen by Lalande, and thought to be a fixed star. The Greek god Poseidon became the Roman Neptune. Prof. J. C. Adams died 21 Jan. 1892; his "Papers" published March, 1897.

1. He rejected the error of those who said Christ was a mere man, as Ebion, Paul of Samosata Photinus. 2. He maintained that the Word was united to the humanity in Christ Jesus, and that this union was most intimate and strict. 3. He held that these two natures made one Christ, one Son, one Person; only made up of two natures. 4. And this one Person may have either divine or human properties attributed to Him.

NEUFCHATEL, a canton in Switzerland, formerly a lordship, afterwards a principality. The first known lord was Ulric de Fenis, about 1032, whose descendants ruled till 1373, after which by marriages it frequently changed governors. On the death of the duchesse de Nemours, the last of the Longuevilles, in 1707, there were many claimants; among them our William III. He and the allies however gave it to Frederick I. of Prussia with the title of prince. In 1806 the principality was ceded to France, and Napoleon bestowed it on his general Berthier, who held it till 1814, when it fell to the disposal of the allies. They restored the king of Prussia with the title of prince with certain rights and privileges; but constituted it a part of the Swiss confederation. Population, 1888: canton, 108,153; city, 16,261.

After an unsuccessful attempt in 1831, the inhabitants repudiated their allegiance to Prussia, and proclaimed Neufchatel a free and independent member of the Swiss confederation . . . 1848

The king of Prussia protested against this; and a protocol was signed between England, France, and Austria, recognising his claims 1852

Some of his adherents, headed by the count de Pourtalès, broke out into insurrection against the republican authorities, who, however, quickly subdued and imprisoned them, with the intention of bringing them to trial . . . . . Sept. 1856

NEW ENGLAND (N. America). The first settlement made in 1607, was named New England by captain Smith, in 1614. A band of 102 Puritans, now termed the "Pilgrim Fathers" (with 28 women) arrived here in the *May Flower*, and founded the settlement on Plymouth Rock, 25 Dec. 1620, which was named New Plymouth. This was the nucleus of Massachusetts, from whence were gradually developed New Hampshire, Vermont, Connecticut, and Rhode Island. In 1643 these settlements formed the first American confederation, a defensive union, with a constitution based on the Mosaic law, governed by a religious aristocracy, which lasted till 1693. Maine was made an independent state in 1820.

NEW FOREST (Hampshire), was made ("afforested") by William the Conqueror, 1079-85. It is said that the whole country, for thirty miles in compass, was laid waste. William Rufus was killed in this forest by an arrow shot by Walter Tyrrel, that accidentally glanced against a tree, 2 Aug. 1100, the site of which is now pointed out by a triangular stone. The New Forest Deer Removal act was passed 14 & 15 Vict. c. 76, 7 Aug. 1851. Agitation for the preservation of this forest, autumn, 1870. In accordance with an act passed in 1877, the forest is now managed by a court of Verderers as a public pleasure ground, and cattle farm. See *Forests.*

NEWFOUNDLAND (N. America), said to have been discovered by John Cabot, who called it *Prima Vista*, 24 June, 1497. It was formally taken possession of by sir Humphry Gilbert, 1583. In the reign of Elizabeth, other nations had the advantage of the English in the fishery. In 1577 there were 100 fishing vessels from Spain, 50 from Portugal, 150 from France, and only 15, but of larger size, from England.—*Hakluyt.* But the English fishery in some years afterwards (1625) had increased so much that the ports of Devonshire alone employed 150 ships, which sold their fish in Spain, Portugal, and Italy. The sovereignty of England was recognised in 1713, by the treaty of Utrecht, certain rights on the "French shores" being reserved for France. Newfoundland obtained the privilege of a colonial legislature in 1832; and the bishopric was established in 1839. Population, 1884, 197,335. Appalling fire at St. John's, a great portion of the town destroyed, the loss estimated at 1,000,000*l.* sterling, 9 June, 1846. On 14 Jan. 1857, a convention was concluded between the English and French governments, confirming certain French privileges of fishery in exchange for others. The English colonists were dissatisfied with this convention. Newfoundland refused union with the dominion of Canada, March, 1869; a railway from St. John's to St. George's bay, proposed by the colonial government Aug. 1878. Capital, St. John's; population, 1884, 31,142. Governor, col. sir Stephen J. Hill, 1870; sir John H. Glover, Jan. 1876. NEWGATE, LONDON. The PRISON derives its name from the gate, to which was attached a small prison, gradually enlarged. One was erected in 1086 by the bishop of London. It was used as a prison for persons of rank as early as 1218; but was rebuilt about two centuries afterwards by the executors of sir Richard Whittington, whose statue with a cat stood in the niche till the time of its demolition by the great fire of London, in 1666. It was then reconstructed; but becoming an accumulation of misery and inconvenience, was pulled down and rebuilt between 1778 and 1780. During the riots in 1780, the interior was destroyed by fire, but shortly afterwards restored. In 1857 the interior was pulled down to be re-erected on a plan adapted to the reformatory system. Newgate was disused as an ordinary prison, 31 Dec. 1881. Major Arthur Griffiths' "Chronicles of Newgate," published Jan. 1884. See *Old Bailey*. NEWMARKET (Cambridgeshire), renowned for its horse-races. It is first mentioned in 1227; and probably derived its name from the market then recently established. James I. erected a hunting seat here, called the king's house, to which Charles I. was taken as a prisoner in 1647, when the parliament army was quartered in the neighbouring village of Kennet. Charles II., who was fond of racing, built a stand-house for the sake of the diversion, about 1667,* and from that period races have been annual to the present time; and many extraordinary races have been run; see *Races.* Population, 1881, 5,093; 1891, 6,213.

NEW ORLEANS, capital of Louisiana, N. America (*which see*), founded in 1717, under the regency of the duke of Orleans. In 1788, seven-eighths of the city were destroyed by fire. The British attacked New Orleans in Dec. 1814, and were repulsed with great loss by the Americans under general Jackson, 8 Jan. 1815; the British general, sir Edward Pakenham, was killed. New Orleans was surrendered to the Federals in April, 1862. The strong feeling of the inhabitants in favour of the Confederates and against the Federals induced general B. Butler to rule them with military rigour, occasionally degenerating into brutal tyranny, especially towards females, May to October, 1862. He was replaced by general Banks, 16 Dec. 1862. Sanguinary riots; due to agitators, begun 30 July, 1866, only suppressed by martial law; about 40 persons, white and coloured, were killed, and about 160 wounded, similar riots occurred, 24 Oct. 1868, and often since. Population in 1880, 216,090; in 1890, 158,019.

New Orleans.—John McEnery elected governor of Louisiana by the southern whites, 4 Nov. 1872; but W. P. Kellogg, elected by the coloured people and their white friends, was recognised by the Federal government. To defend themselves against tyranny, the southerns formed the "white league," and collected arms, which they refused to surrender on demand on 15 Sept. 1874. They deposed Kellogg at New Orleans after some resistance, and established McEnery as governor, but submitted to the president's proclamation; and Kellogg was restored 18 Sept.

CHARTIST RIOTS.—About 10,000 chartists (*which see*), from the neighbouring mines, armed with guns, pikes, &c., arrived at Newport, 4 Nov. 1839. They divided themselves into two bodies—one, under the command of Mr. John Frost, an ex-magistrate, proceeded down the principal street; whilst the other, headed by his son, took the direction of Stow-hill. They met in front of the Westgate hotel, where the magistrates were assembled with about 30 soldiers of the 45th regiment, and several special constables. The rioters broke the windows and fired on the inmates, by which the mayor, Mr. (afterwards sir Thomas) Phillips, and several other persons, were wounded. The soldiers returned the fire, and dispersed the mob, which fled, leaving about 20 dead, and others wounded. A detachment of the 10th royal hussars arrived from Bristol, and the town became tranquil.

Frost was apprehended on the following day, together with his printer, and other influential persons among the chartists. He and others were tried and sentenced to death (afterwards commuted to transportation) . . . . . Jan. 1840

NEW RIVER, for the supply of London with water, was begun 1609, and finished in 1613, when the projector, Hugh Myddelton, a London goldsmith, was knighted by James I.—*Strype*. This artificial river, which rises in Hertfordshire,* and which, with its windings, then forty-eight miles long, was brought to London, and opened 29 Sept. 1613. So little was the benefit of it understood, that for above thirty years the seventy-two shares (equally divided into *King's* and *Adventurers'*), netted only 5*l*. apiece. Charles I. sold his shares to Myddelton's representatives for an annuity of 500*l*. Each of these shares was sold originally for 100*l*. NEW SOUTH WALES, the principal colony of Australia on the eastern coast was explored and taken possession of and named by captain Cook in 1770. At his recommendation a convict colony was first formed here. NEWSPAPER PROVINCIAL SOCIETY, established in 1836, became the Newspaper Society in 1889; see *Press Association*.

NEWSPAPERS. The Roman *Acta Diurna* were issued, it is said, 691 B.C. In modern times, a *Gazetta*, which derived its name from its price, a small coin, was published in Venice (about 1536). The *Gazette de France*, now existing, first appeared in April, 1631, edited by Renaudot, a physician. It was patronised by the king, Louis XIII., who wrote one article for it, and by Richelieu. The first real newspaper published in England* was established by sir Roger L'Estrange, in 1663: it was entitled the *Public Intelligencer*, and continued nearly three years, when it ceased, on the appearance of the *Gazette*. In the reign of James I., 1622, appeared the *London Weekly Courant;* and in the year 1642 (the period of the civil war) were printed a variety of publications, certainly in no respect entitled to the name of newspapers. See *Fourth Estate*. The following are the titles of some of them:—

England's Memorable Accidents.
The Kingdom's Intelligencer.
The Diurnal of Certain Passages in Parliament.
The Mercurius Aulicus.
The Scotch Intelligencer.
The Parliament's Scout.
The Parliament's Scout's Discovery, or certain Information.
The Mercurius Civicus, or London's Intelligencer.
The Country's Complaint, &c.
The Weekly Accounts.
Mercurius Britannicus.

NEW STYLE. Pope Gregory XIII., in order to rectify the errors of the current calendar, pub-

lished a new one, in which ten days were omitted—5 Oct. 1582, becoming 15 Oct. The new style was adopted in France, Italy, Spain, Denmark, Holland, Flanders, Portugal, in 1582, in Germany in 1584, in Switzerland in 1583 and 1584, in Hungary in 1587; in Scotland in 1600, and in England in 1751. In 1752 eleven days were left out of the calendar—3 Sept. being reckoned as 14 Sept. The difference between the old and new style up to 1699 was 10 days; after 1700, 11 days; after 1800, 12 days. In Russia, Greece, and throughout the East, the old style is still retained. The czar, Alexander II., was born on the 17th April, 1818, old style, 29 April, new style; see *Calendar*.

NEW TESTAMENT, see *Bible*.

NEWTONIAN PHILOSOPHY, the doctrines respecting gravitation, &c., taught by sir Isaac Newton in his "Principia," published in 1687; see *Gravitation*. He was born 25 Dec., 1642; became master of the mint, 1699; president of the Royal Society, 1703; and died 20 March, 1727. A statue of him in marble by Roubiliac was set up at Trinity College, Cambridge, 14 July, 1755, and one in bronze by Theed, at Grantham, 21 Sept. 1858, when lord Brougham delivered a discourse on the life and works of Newton. The latter statue cost 1600*l*., a sum obtained by public subscription.

NEWTOWNBARRY RIOT (S.E. Ireland). At a seizure of stock for tithes, a conflict ensued here between the yeomanry and the people, when thirty-five persons were killed or wounded, 18 June, 1831. The jury at the inquest were unable to agree on a verdict.

NEWTOWN-BUTLER (N. Ireland). On 30 July, 1689, the Enniskilleners under Gustavus Hamilton thoroughly defeated the adherents of James II. commanded by general Maccarty, taking him prisoner with his artillery, arms, and baggage.

NEW YEAR'S DAY, &c. The beginning of the Jewish year was changed and the passover instituted, 1491 B.C. A feast is said to have been instituted by Numa, and dedicated to Janus (who presided over the new year), 1 Jan. 713 B.C.

On this day the Romans sacrificed to Janus a cake of now sifted meal, with salt, incense, and wine; and all the mechanics began something of their art of trade; the men of letters did the same, as to books, poems, &c.; and the consuls, though chosen before, took the chair and entered upon their office this day. Nonius Marcellus refers the origin of NEW-YEAR'S GIFTS among the Romans to Titus Tatius, king of the Sabines, who having considered as a good omen a present of some branches cut in a wood consecrated to Strenia, the goddess of strength, which he received on the first day of the new year, authorised the custom afterwards, and gave these gifts the name of Strenæ, 747 B.C.

NEW YORK, the "empire state" of the United States of N. NEY'S EXECUTION. Ney, duke of Elchingen, prince of the Moskwa, and one of the most valiant of the marshals of France, was shot as a traitor, 7 Dec. 1815. On 7 Dec. 1853, his statue was erected on the spot where he fell.

After the abdication of Napoleon I., 5 April, 1814, Ney took the oath of allegiance to the king, Louis XVIII. On Napoleon's return to France from Elba, he marched against him; but his troops deserting, he regarded the cause of the Bourbons as lost, and opened the invader's way to Paris, March, 1815. Ney led the attack of the French at Waterloo, where he fought in the midst of the slain, his clothes pierced with bullet-holes, five horses having been shot under him; night and defeat obliged him to flee. Though included in the decree of 24 July, 1815, which guaranteed the safety of all Frenchmen, he was sought out, and on 5 Aug. taken at the castle of a friend at Urillac, and brought to trial before the Chamber of Peers, 4 Dec. The 12th article of the capitulation of Paris, fixing a general amnesty, was quoted in his favour in vain.

NEZIB, Syria. Here Ibrahim and the Egyptians defeated the Turks, 24 June, 1839.

NIAGARA (N. America). At the head of this river, on the western shore, is Fort Erie, which was taken by the English, 24 July, 1759. It was abandoned in the war with the United States, 27 May, 1813, but was retaken, 19 Dec. following. A suspension bridge of a single span of 820 feet over the Niagara, connecting the railways of Canada and New York, was opened in March, 1855. It is elevated 18 feet on the Canadian, and 28 feet on the American side; superseded by a great new steel arch bridge, last panel fitted, 28, 29 March, 1897, a great engineering feat, constructed by the Pennsylvanian steel company for the Canadian and New York incorporations.

About eighteen miles below Fort Erie are the remarkable falls. The river is here 740 yards wide; the half-mile immediately above the cataracts is a rapid, in which the water falls 58 feet; it is then thrown, with astonishing grandeur, down a stupendous precipice of 150 feet perpendicular, in three distinct and collateral sheets; and, in a rapid that extends to the distance of nine miles below, falls nearly as much more. The river then flows in a deep channel till it enters lake Ontario, at Fort Niagara.

The falls visited by the prince of Wales, Sept. 1860.
Blondin crossed the falls on a tight rope, 30 June *et seq.* to 2 Sept. 1859; and again in 1860.

An international commission (president, sir Wm. Thomson, afterwards lord Kelvin) was appointed to consider the best method for utilizing 125,000 horse-power, of the force of the Niagara falls, which is computed to be about 4,500,000 horse-power. Prizes were given by the Cataract company to the authors of various projects 9 Feb. 1891.
In the *Times* of 8 June, 1892, professor George Forbes, who was engaged in the undertaking, reported that the engineering works were nearly completed, and that the electrical arrangements by which the vast force was to be transmitted, were begun.
The force is to be used in factories, in lighting Niagara Falls city, and in working railways. In 1892 the work was carried on by the Niagara Falls Power company.

NIBELUNGE NŎT or NIBELUNGEN-LIED, a popular German epic of the 12th century, composed of various ancient mythical poems, termed sagas; which according to the poet Wm. Morris, should be to our race what Homer was to the Greeks.

The first critical edition, by K. Lachmann, appeared 1826 and 1846. The best translation in modern German, by Simrock, 1827; a useful edition, with translation and glossary, by L. Braunfels, 1846; in English, by W. N. Lettsom, 2nd ed. 1874.
Richard Wagner's musical dramas, "The Ring of the Nibelungen," are based on this poem: the persons include the great Northern gods and goddesses, the giants, the dwarfs, and the daughters of the Rhine (see under *Music*).

NICÆA, see *Nice.*

NICARAGUA, a state in Central America (*which see*). The present constitution was established 19 Aug. 1858. At the commencement of 1855 it was greatly disturbed by two political parties: that of the president, Chamorro, who held Granada, the capital, and that of the democratic chief, Castellon, who held Leon. The latter invited Walker, the filibuster, to his assistance, who in a short time became sole dictator of the state.* By the united efforts of the confederated states the filibusters were all expelled in May, 1857. On 1 May, 1858, Nicaragua and Costa Rica appealed to the great European powers for protection. Nicaragua railway, a transit route between the Pacific and Atlantic, proposed, and company formed Nov. 1866. President T. Martinez elected, 1859 and 1863; Fernando Guzman, elected 1 March, 1867; Vicente Quadra elected 1 Feb. 1871; Pedro Joaquin Chamorro, 1 Feb. 1875; Joaquin Zavala, 1 March, 1879; Dr. Adam Cardenas, Jan. 1883; Señor Carazo, 16 Dec. 1886. Population in 1897, 310,000.

Louis Napoleon, afterwards emperor, proposed the making a ship canal by the lake Nicaragua from the Atlantic to the Pacific, between 1842-4; the government of Nicaragua proposed it in 1846; colonel Childs made a survey in 1851; a company was chartered for 85 years, and conventions were signed, but the capitalists declined their support.
The scheme was revived in Feb. 1875. See *Panama*; and *Loans.*

* William Walker was born at Tennessee, in the United States, where he became successively doctor, lawyer, and journalist, and afterwards gold-seeker in California, whence he was invited to Nicaragua by Castellon, with the promise of 52,000 acres of land, on condition of bringing with him a band of adventurers to sustain the revolutionary cause. Walker accepted the terms, and on 28 June landed at Realejo with 68 men. He increased his forces at Leon, and soon after attacked the town of Rivas, where he was repulsed with loss. He then joined col. Kinney, who had occupied and governed Grey Town, 6 Sept. On 13 Oct. Walker captured Grenada by surprise when in a defenceless state, shot Mayorga, one of the ministers, and established a rule of terror. By intervention of the American consul he made peace with the general of the state army, Corral, but shot him on 7 Nov., on finding him corresponding with fugitives at Costa Rica. Walker at first was only general-in-chief; but on Rivas, whom he had made president, deserting him, he became sole dictator. On 14 May, 1856, his envoy Vijil was recognised by the president of the United States, whence also he obtained reinforcements during his retention of power. Costa Rica declared war against him, 28 Feb. 1856; the other states of central America soon followed the example, and a sanguinary struggle ensued, lasting till May, 1857. On 25 Nov. 1856, Walker totally burnt Grenada, being unable to defend it, and removed the seat of government to Rivas. This place he surrendered to gen. Mora on 1 May, 1857, on the intervention of capt. Davis, of the *St. Mary's*, U.S. Himself, his staff, and 260 men, were conveyed in that vessel to New Orleans, where they were received with great enthusiasm. On 25 Nov., 1857, he again invaded Nicaragua, landing at Punta Arenas with 400 men; but on 8 Dec. was compelled to surrender to capt. Paulding, U.S., and was conveyed to New York. He escaped punishment by *nolle prosequi* (2 June, 1858): but capt. Paulding was tried for exceeding orders, and blamed—yet excused by president Buchanan. On 5 Aug. 1860, Walker landed near Truxillo, Honduras, and took the fort on the 6th. On the 7th he proclaimed that he made war on the government, not on the people of Honduras. On being summoned to surrender his booty by capt. Salmon, R.N., of the *Icarus*, he refused, and fled. He was pursued, caught, given up to the Honduras government, tried, and shot (12 Sept.). His followers were dismissed. Grey Town was surrendered to Nicaragua in 1860.

NICE or **NICÆA**, a town in Bithynia, Asia Minor, N. W. Antigonus gave it the name Antigoneia, which Lysimachus changed to Nicæa, the name of his wife. It became the residence of the kings of Bithynia about 208 B.C. At the battle of Nice, A.D. 194, the emperor Severus defeated his rival, Pescennius Niger, who was again defeated at Issus, and soon after taken prisoner and put to death. The first general council was held here 19 June to 25 Aug. 325, which adopted the NICENE CREED and condemned the Arians. It was attended by 318 bishops from divers parts, who settled both the doctrine of the Trinity and the time for observing Easter. An addition was made to the creed, 381; was rejected, 431. See *Filioque*. When the Crusaders took Constantinople, and established a Latin empire there in 1204, the Greek emperors removed to Nice and reigned there till 1261, when they returned to Constantinople; see *Eastern Empire*. Nice was taken by the Ottoman Turks in 1330.

NICE (S. E. France) was the seat of a colony from Massilia, now Marseilles, and formed part of the Roman empire. In the middle ages it was subject to Genoa, and suffered from the frequent wars, being taken and re-taken by the imperialists and French. It was taken by the Austrians under Melas, 1800; seized and annexed to France 1792; restored to Sardinia in 1814. Nice was again annexed to France in virtue of the treaty of 24 March, 1860; the people having voted nearly unanimously for this change by universal suffrage. The French troops entered 1 April, and definite possession was taken 14 June following. Garibaldi, a native, vehemently protested against this annexation.

The *nickel heat* engine of professor Stefan of Vienna in 1885, consisted of plates of nickel fixed on a wheel which rotated when the metal was heated, in the presence of a magnet. Similar machines have been constructed by E. Berliner, 1885, Edison, 1887, and F. J. Smith, 1892.

W., founded by king Nicomedes I., 264 B.C., on the remains of Astacus; destroyed by an earthquake, A.D. 115; and restored by the emperor Adrian, 124. The Roman emperors frequently resided here during their eastern wars. Here Diocletian resigned the purple, 305; and Constantine died at his villa in its neighbourhood, 337. It surrendered to the Seljukian Turks, 1078; and to Orchan and the Ottoman Turks in 1338.

NIHILISM, a popular name for the school of philosophy which believes nothing without physical evidence, renounces all forms of Divine revelation, and gives nothing in their place.

NIL DARPAN, see *India*, June, 1861.

NILE (Egypt). The longest river in Africa, formerly considered to have its rise in what were termed "the Mountains of the Moon." The travels of Bruce were undertaken to discover the source of the Nile. He set out from England in June, 1768; on the 14th of November, 1770, discovered the source of the Blue Nile in lake Tana, and returned home in 1773. The Nile overflows regularly every year, from about the 15th of June to the 17th of September, when, having given fertility to the land, it begins to decrease. The first Nilometer (a pillar), is said to have been set up by Osirtasen III., a king of the XII. dynasty, 2,300 B.C. One was set up by Solyman the Caliph, 715 A.D. In 1829, the inundations of the Nile rose to 26 instead of 22, by which 30,000 people were drowned and immense property lost. Mr. Petherick set out early in 1861 to explore the country at the source of the Nile. For recent discoveries, see *Africa* 1863. A bridge over the Nile (above 1300 feet) at Cairo, was completed by a French company, Aug. 1872. For the discoveries of Speke, Grant, and Baker, see *Victoria Nyanza, &c.*

Mr. H. M. Stanley, in his book, "Darkest Africa," published June, 1890, expressed his opinion that the newly discovered lake Albert Edward Nyanza, at the head of the Semliki river which is fed by the snows of the mighty Ruivenzori range (possibly the Mountains of the Moon mentioned by Ptolemy the geographer in the 2nd century A.D.), is the real source of the Nile.

The *barrage* works of the Nile, consisting of two great dams or weirs for irrigation, and the conveyance of boats by means of locks, constructed under the direction of Mouget Bey, a Frenchman, 1843–61; were unsuccessful and eventually neglected.

In 1885 the great powers agreed to the expenditure of 1,000,000*l.* on irrigation works, and the renovation of the barrage was effected under the direction of sir Colin Scott Moncrieff, 1886–90; supplementary dams advised by sir W. E. Garstin in 1897.

Mouget Bey died at Paris, aged 82, Dec. 1890.

NILE, BATTLE OF THE (or Aboukir), 1 Aug. 1798, near Rosetta, between the French fleet under Brueys, and the British under sir Horatio Nelson. Nine of the French line-of-battle ships were taken, two were burnt, and two escaped. The French ship, *L'Orient*, with Brueys and 1000 men on board, blew up, and only 70 or 80 escaped. Nelson's exclamation upon commencing the battle was, "Victory or Westminster Abbey!"

NIMEGUEN (Holland). Here was signed the treaty of peace between France and the United Provinces, 1678. The French were successful against the British under the duke of York, before Nimeguen, 28 Oct. 1794; were defeated by them 3 Nov.; but gained the place 8 Nov. Population, 1890, 32,618.

NINETEENTH CENTURY, a magazine open to writers of totally different opinions; first appeared, March, 1877; editor, James Knowles.

NINEVEH, the capital of the Assyrian empire (see *Assyria*), founded by Ashur about 2245 B.C. The empire fell when Nebuchadnezzar captured Nineveh 606 B.C. The discoveries of Layard and others since 1839, in the neighbourhood of Mosul, at Koyunjik, the site of the ancient Nineveh, and other places, have in a manner disinterred and re-peopled a city which for centuries had ceased to figure on the page of history. Botta commenced his explorations at Khorsabad in 1843, and published his great work "Monuments de Nivive," 1849-50. In 1848 Mr. (after Sir Austen Henry Layard, K.C.B.) published his "Nineveh and its Remains," and in 1853 his "Discoveries," in his second visit in 1849-50. He was born 5 March, 1817, and died 5 July, 1894. *See Gladstone*, 1868, ambassador at Constantinople, 1877-80. Mr. Hormusd Rassam, in 1854, discovered an ancient palace. Mr. George Smith described his excavations and their results in 1873-4, in "Assyrian Discoveries," 1875. He died at Aleppo, 19 Aug. 1876. See *Assyria*. Mr. Rassam, appointed his successor, among other valuable discoveries at Balawât, nine miles N.E. of Nimroud, and at Koyunjik, &c., found a bronze monument with inscriptions recording the names, title, genealogy, and exploits of king Assur-nazir-pal (B.C. 885-860), builder of the palaces and temples of Kalakh, the capital of the middle Assyrian empire. Mr. Rassam arrived in London with collections, Dec. 1882.

The forms, features, costume, religion, modes of warfare, and ceremonial customs of its inhabitants stand before us as distinct as those of a living people; and by help of the sculptures and their cuneiform inscriptions, the researches of the learned have increased the knowledge of Assyrian history. Among the sculptures that enrich the British Museum, may be mentioned, the winged bull and lion, and numerous hunting and battle pieces; and the bas-relief of the eagle-headed human figure, presumed to be a representation of the Assyrian god Nisroch (from *Nisr*, an *eagle* or *hawk*), whom Sennacherib was in the act of worshipping when he was assassinated by his two sons, about 710 B.C. 2 *Kings* xix. 37.

NIOBIUM, a rare metal, discovered by Hatchett in columbite, a black earth, and named columbium, 1801. It was pronounced to be identical with tantalum (or tantalium) by Wollaston; but was rediscovered by H. Rose in 1846, and named niobium.

NIRVANA, see *Buddhism*.

NISBET or NESBET (Northumberland). Here a battle was fought between the English and Scotch armies, the latter greatly disproportioned in strength to the former. Several thousands of the Scots were slain upon the field and in the pursuit, 7 May, 1402.

NISERO, see *Acheen*.

NISI PRIUS ("unless before"), words in a writ summoning a person to be tried at Westminster, *unless* the judges should come to hold their assizes in the place where he is. Judges sit in Middlesex by virtue of 18 Eliz. c. 12 (1576).

NISMES (Nimes), S. France, was the flourishing Roman colony, Nemausus. Its noble amphitheatre was injured by the English in 1417. The inhabitants embraced Protestantism, and suffered much persecution in consequence, and Nismes has frequently been the scene of religious and political contests. The treaty termed the Pacification of

Nismes (14 July, 1629) gave religious toleration for a time to the Huguenots.

NITRE, see *Saltpetre*.

NITRIC ACID, a compound of nitrogen and oxygen, formerly called *aqua fortis*, is said to have been first obtained in a separate state by Raymond Lully, an alchemist, about 1287; but we are indebted to Cavendish, Priestley, and Lavoisier for our present knowledge of its properties. H. Cavendish demonstrated the nature of this acid in 1785. *Nitrous acid* was discovered by Scheele about 1774. *Nitrous gas* was accidentally discovered by Dr. Hales, *Nitrous oxide gas* (laughing gas) was discovered by Dr. Priestley in 1776. The use of this gas as an anæsthetic, recommended by H. Davey in 1800, was begun in America (by Mr. Wells, a dentist), 1844; in Paris, 1866; in London, 31 March, 1868, ingenious apparatus having been invented for its application.

NITROGEN or AZOTE (from the Greek *a*, no, and *zaō* or *zō*, I live), an irrespirable elementary gas, and an important element in food, discovered by Rutherford about 1772. Before 1777, Scheele separated the oxygen of the air from the nitrogen, and almost simultaneously with Lavoisier discovered that the atmosphere is a mixture of these two gases. Nitrogen combined with hydrogen forms the volatile alkali ammonia, so freely given off by decomposing animal and vegetable bodies. See *Air*, 1894. Prof. Hermann Hellriegel (born 1831) demonstrated in 1886 the power of leguminous plants to fix free nitrogen through the agency of microbes in their root nodules whereby the soil is much enriched. Clover gives up to the soil that which wheat requires. He died 24 Sept. 1895.

NITRO-GLYCERINE (also called NITROLEUM), an intensely explosive amber-like fluid, discovered by Sobrero in 1847, is produced by adding glycerine (in successive small quantities) to a mixture of one part of nitric acid, and two parts of sulphuric acid. Alfred Nobel, a Swede, first attempted its application as an explosive agent, in 1864. It has caused several most disastrous accidents, with great loss of life. In attempting to bury some nitro-glycerine in the town moor at Newcastle-on-Tyne, 17 Dec. 1867, an explosion took place, and seven persons lost their lives, including Mr. Mawson, the sheriff, and Mr. Bryson, town surveyor; see *Dynamite*. Mr. Alfred Nobel's nitro-glycerine manufactory, near Stockholm, blown up; 15 persons killed, many injured, 10 June, 1868. An act prohibiting its importation for a time, and regulating its transmission, was passed in 1869, and repealed by the Explosives Act of 1875. Secret manufacture discovered, see *Birmingham*, 1883.

NIZAM, see *Hyderabad*.

NOBILITY. The Goths, after they had seized a part of Europe, rewarded their heroes with titles of honour, to distinguish them from the common people. The right of peerage seems to have been at first territorial. Patents to persons having no estate were first granted by Philip the Fair of France, 1095. George Neville, duke of Bedford (son of John, marquis of Montague), ennobled in 1470, was degraded from the peerage by parliament, on account of his utter want of property, 19 Edw. IV., 1478. Noblemen's privileges were restrained in June, 1773; see *Lords*, and the various orders of the nobility.

In 1845 a statistical writer said that there were 500,000 nobles in Russia, 239,000 in Austria; in Spain (in 1780), 470,000; in France (before 1790) 360,000 (of whom 4,120 were of the *ancienne noblesse*); in the United Kingdom, 1,631 with transmissible titles (dukes to baronets).

NOBILITY OF FRANCE preceded that of England. On 18 June, 1790, the National Assembly decreed that hereditary nobility could not exist in a free state; that the titles of dukes, counts, marquises, knights, barons, excellencies, abbots, and others be abolished; that all citizens take their family names; liveries and armorial bearings also to be abolished. The records of the nobility, 600 volumes, were burnt at the foot of the statue of Louis XIV., 25 June, 1792. A new nobility was created by the emperor Napoleon I., 1808. The hereditary peerage was abolished 27 Dec. 1831; re-instituted by Napoleon III., 1852.

NOBLE, an English gold coin (value 6*s*. 8*d*.), first struck in the reign of Edward III., 1343 or 1344, said to have derived its name from the excellence of the metal of which it was composed.

NOCTURNE, a name given by John Field (who died 1837) to a new and very pleasing musical composition. He was followed very successfully by Chopin, who died, 1849. The term was adopted by Mr. Whistler, the artist, for his night pieces, in which he began with line, form, and colour, 1877–8.

"NOLUMUS LEGES ANGLIÆ MUTARI," see *Bastards*, and *Merton*.

NOMINALISTS (or CONCEPTUALISTS), a scholastic sect, opposed to the Realists, maintain that general ideas have no existence outside our minds, and only exist by the names we give them. The founder of the sect, Jean Roscellin, a canon of Compiègne, was condemned by a council at Soissons, 1092, but the controversy was revived in the 12th century. Among the Nominalists are reckoned Abelard, St. Thomas Aquinas (partially), Occam, Hobbes, Locke, Berkeley, and Dugald Stewart. The Realists assert that general ideas are real things with positive existence.

NON-CONFORMISTS. The Protestants in England are divided into conformists and non-conformists; or, churchmen and dissenters. The first place of meeting of the latter, in England, was established at Wandsworth, near London, 20 Nov. 1572. The name of non-conformists was taken by the Puritans when the Act of Uniformity came into operation on 24 Aug. 1662 (termed "Black Bartholomew's day"), when 2000 ministers of the established religion resigned, not choosing to conform to the statute passed "for the uniformity of public prayers and administration of the sacraments;" see *Puritans*, and *Dissenters*. The laws against them were relaxed by the Toleration act, 24 May, 1689.—The *Nonconformist* newspaper (edited by Mr. Edward Miall, aft. M.P.) first appeared 14 April, 1841. He died 29 April, 1881.

Three large bodies in England, Congregationalists (or Independents), Baptists, Wesleyan Methodists, 8 others of considerable importance, Presbyterians, Unitarians, Society of Friends (Quakers), Salvation Army and 4 Wesleyan bodies; Primitive Methodists, Methodist (New Connexion), United Methodist Free Churches, and Bible Christians in 1897.

NONES, in the Roman calendar, were the fifth day of each month, excepting March, May, July, and October, when the nones fell on the seventh day.

NON-JURORS considered James II. to have been unjustly deposed, and refused to swear allegiance to William III. in 1689. Among them were Sancroft, archbishop of Canterbury; Ken, bishop of Bath and Wells, and the bishops of Ely, Gloucester, Norwich, and Peterborough, and many of the clergy, who were deprived 1 Feb. 1691. Nonjurors were subjected to double taxation, and obliged to register their estates, May, 1723. They formed a separate communion, which existed till the beginning of the present century.

NON NOBIS, DOMINE! ("Not unto us, O Lord!" &c., *Psalm* cxv. 1), a musical canon, sung as a grace at public feasts, was composed by W. Birde in 1618.

NON-RESISTANCE OATH (containing a declaration that it is unlawful to take arms against the king upon any pretence whatever), enforced by the Corporation act, 1661, was repealed in 1719.

NORMANDY (N. France), part of Neustria, a kingdom founded by Clovis in 511 for his son Clotaire, which, after various changes, was united to France by Charles the Bald in 837. From the beginning of the 9th century it was continually devastated by the Scandinavians, termed Northmen or Normans, to purchase repose from whose irruptions Charles the Simple of France ceded the duchy to their leader Rollo, 905. Rollo, the first duke, held it as a fief of the crown of France, and several of his successors after him, until William, the seventh duke, acquired England, in 1066. It remained a province of England till the reign of king John, 1204, when it was conquered by Philip Augustus and reunited to France. It was re-conquered by Henry V., 1418, and held by England partially till 1450. The English still possess the islands on the coast, of which Jersey and Guernsey are the principal.

NORWICH, BISHOPRIC OF, originally East Anglia; the first bishop was Felix, a Burgundian, sent to convert the East Anglians about 630. The see was divided into two distinct bishopries—Elmham, in Norfolk, and Dunwich, in Suffolk, about 673. Both sees suffered extremely from the Danish invasions, insomuch that after the death of St. Humbert, they lay vacant for a hundred years. At last the see of Elmham was revived, and Dunwich was united to it; but Arfastus removed the seat to Thetford, where it continued till Herbert Losinga removed it to Norwich, 1094. This see has given to the church of Rome two saints; and to the nation five lord chancellors. It was valued in the king's books at 899*l.* 18*s.* 7½*d.* per annum. Present income, 4500*l.*; see *Bishoprics*.

NOTABLES, French assemblies of nobles, bishops, knights, and lawyers. An assembly of the notables was convened by the duke of Guise, 20 Aug. 1560, and by other statesmen. Calonne, the minister of Louis XVI., summoned one which met on 22 Feb. 1787, on account of the deranged state of the king's finances, and again in 1788, when he opened his plan: but as any reform militated too much against private interest to be adopted, Calonne was dismissed, and soon after retired to England. Louis having lost his confidential minister, De Vergennes, by death, called De Brienne, an ecclesiastic, to his councils. The notables were re-assembled on 6 Nov. 1788. In the end, the states-general were convoked 5 Dec.; and from this assembly sprang the national assembly (*which see*). The notables were dismissed by the king, 12 Dec. 1788.—The *Spanish notables* assembled and met Napoleon (conformably with a decree issued by him commanding their attendance), at Bayonne, 25 May, 1808.

NUITS. A small fortified town, near Dijon, in Burgundy, N.E. France, chartered in 1212; frequently captured and ravaged, specially in 1569, 1576, and 1636. It was taken by the Badenese under Von Werder, 18 Dec. 1870, after five hours' conflict, in which above 1000 French are said to have been killed and wounded, and 700 prisoners taken. The German loss was also heavy. A depôt of arms and ammunition was gained by the victors.

NUMANTINE WAR. The war between the Romans and the Celtiberians (Celts who possessed the country near the Iber, now the Ebro) began, 143 B.C., on account of the latter having given refuge to their allies the Sigidians, who had been defeated by the Romans. Numantia, an unprotected city, withstood a long siege, in which the army of Scipio Africanus, 60,000 men, was opposed by no more than 4000 men able to bear arms. The Numantines fed upon horse-flesh, and their own dead, and then drew lots to kill one another. At length they set fire to their houses, and destroyed themselves, so that not one remained to adorn the triumph of the conqueror, 133 B.C.

NUMIDIA (N. Africa), the seat of the war of the Romans with Jugurtha, which began 111 B.C., and ended with his subjugation and captivity, 106. The last king, Juba, joined Cato and was killed at the battle of Thapsus, 46 B.C., when Numidia became a Roman province; see *Mauritania*.

It publishes the *Numismatic Chronicle*.—Mr. Yonge Akerman's Numismatic Manual (1840) is a useful introduction to the science. Foreign works are numerous.

NUNCIO, an envoy from the pope of Rome to catholic states. The pope deputed a nuncio to the Irish rebels in 1645. The arrival in London of a nuncio, and his admission to an audience by James II., July, 1687, is stated to have hastened the Revolution.

NUNNERY. The first founded is said to have been that to which the sister of St. Anthony retired at the close of the 3rd century. The first founded in France, near Poictiers, by St. Marcellina, sister to St. Martin, 360.—*Du Fresnoy*. The first in England was at Folkestone, in Kent, by Eadbald, or Edbald, king of Kent, 630.—*Dugdale;* see *Abbeys* and *Monachism*. The nuns were expelled from their convents in Germany, in July, 1785; in France, in Jan. 1790. In Feb. 1861, monastic establishments were abolished in Naples, compensation being made to the inmates. For memorable instances of the fortitude of nuns, see *Acre*, and *Coldingham*.

NUREMBERG, a free imperial German city in 1219. In 1522, the diet here demanded ecclesiastical reforms and a general council, and in 1532 secured religious liberty to the Protestants. It was annexed to Bavaria in 1805. Albert Dürer was born here in 1471. Population, 1890, 142,403.

NURSES, their qualifications have been greatly raised during this century by the influence of Florence Nightingale and the viscountess Strangford, who died 24 March, 1887; both ladies rendered eminent services to the sick and wounded in the Russo-Turkish wars. In June, 403, the "*Synod of the oak*," was held at Chalcedon. OATES'S PLOT. Titus Oates, at one time chaplain of a ship of war, was dismissed for immoral conduct, and became a lecturer in London. In conjunction with Dr. Tongue, he invented a plot against the Roman Catholics, who he asserted had conspired to assassinate Charles II., and extirpate the Protestant religion. He made it known 12 Aug. 1678, and in consequence about eighteen Roman Catholics were accused, and upon false testimony convicted and executed; among them the aged viscount Stafford, 29 Dec. 1680. Oates was afterwards tried for perjury (in the reign of James II.), and being found guilty, was fined, put in the pillory, publicly whipped from Newgate to Tyburn, and sentenced to imprisonment for life, May, 1685. Pardoned on the accession of William and Mary, and a pension of 3*l.* a week granted to him, 1689.

OATHS were taken by Abraham, B.C. 1892 (*Gen.* xxi. 24), and authorised (B.C. 1491) *Exod.* xxii. 11. The administration of an oath in judicial proceedings was introduced by the Saxons into England, 600.—*Rapin*. That administered to a judge was settled 1344.

OBELISK (Greek *obelos*, a spit, *monolithos*, a single stone). The Egyptian symbol of the supreme God. The first mentioned in history was that of Rameses II., king of Egypt, about 1322 B.C. The Arabians called them Pharaoh's needles, and the Egyptian priests the fingers of the sun. Several were erected at Rome; one was erected by the emperor Augustus in the Campus Martius, on the pavement of which was a horizontal dial that marked the hour, about 14 B.C. Of the obelisks brought to Rome by the emperors, several have been restored and set up by various popes. One was excavated and set up in the piazza of St. John Lateran, Rome, by Sixtus V. 1588.

Egyptian Obelisks.—42 are known, some broken: 12 at Rome; 1, from Luxor, set up in the Place de la Concorde, Paris, Oct. 1836; 5 in England (2 British museum; 1 Alnwick; 1 Soughton hall; 1 on Thames embankment).
The obelisks improperly named *Cleopatra's Needles* were erected by Thothmes III. at On (Heliopolis), about 1600 B.C. One was removed to Alexandria by Augustus, about 23 B.C. After being long imbedded in the shore, it was acquired for Great Britain by sir Ralph Abercromby, in 1801; but not removed. It was offered to the British government by Mehemet Ali, and again by the Khedive, 15 March, 1877.
Mr. James Erasmus Wilson (knt. Nov. 1881) having offered to pay all expenses, Mr. John Dixon, the engineer, undertook to convey it to England. The vessel, *Cleopatra*, containing it sailed with the *Olga* 21 Sept. During a violent gale, the vessels were separated, 14-15 Oct.; six lives were lost in a fruitless attempt to recover it. The *Cleopatra*, which was abandoned, was found by the *Fitzmaurice* (capt. Carter), and towed to Ferrol, whence it was towed by the *Anglia*, and arrived in London, 20 Jan. 1878.

The salvage awarded was 2000*l.*, 6 April, 1878.
After much discussion, the Thames embankment (between Charing cross and Waterloo bridges) was selected for its site; where, by much engineering skill, it was placed, 12 Sept. 1878.
The obelisk weighs 186 tons, 7 cwt., 2 stones, 11 lb. Height, from base to point, 68 feet 5½ inches.
It was placed under the care of the metropolitan board of works by act passed 22 July, 1878.
Sir J. Erasmus Wilson died 8 Aug. 1884.
In London are three English obelisks: first in Fleet-street, at the top of Bridge-street, erected to John Wilkes, lord mayor of London in 1775 (see *North Briton*); and immediately opposite to it at the south end of Farringdon-street, stands another of granite to the memory of Robert Waithman, lord mayor in 1824, erected 25 June, 1833; the third at the south end of the Blackfriars-road marks the distance of one mile and a fraction from Fleet-street.

These octrois, of ancient origin, were suppressed in 1791; re-established, 1797, and reorganised in 1816, 1842, and 1852. In 1859, the octrois of Paris produced above 54 million francs. Sitalces, killed in battle with the Triballi, 424, was succeeded by Seuthes, who reigned prosperously; Cotys, another king (382-353), disputed the possession of the Thracian Chersonesus with Athens. After 9 or 10 years' warfare, Philip II. of Macedon reduced the Odrysæ to tributaries, and founded Philippopolis and other colonies, 343. The Romans, after their conquest of Macedon, favoured the Odrysæ, and in 42 their king Sadales bequeathed his territories to the Romans. OPTIMISM (from *optimus*, the best), the doctrine that everything which happens is for the best, in opposition to Pessimism (from *pessimus*, the worst). The germ of optimism is to be found in Plato, and in St. Augustin, and other fathers; and has been especially propounded by Malebranche and Leibnitz, and adopted by Pope, Bolingbroke, Rousseau, and others. Optimism as expressed in the term, "the best of all possible worlds," is ridiculed by Voltaire (1694-1778) in his "Candide." The term *meliorism* (from *melior*, better) has been lately introduced. See *Pessimism*.

"OPTION," a term given at the time to the permission given to the inhabitants of Alsace and Lorraine by the German government to choose, before 30 Sept. 1872, whether they would quit their country or become German subjects. Great numbers emigrated into the French territories. The "option" of archbishops respecting their claims on a benefice becoming void on the creation or translation of a bishop, was abolished in 1845.

ORACLES, a term applied to revelations made by God to man. They were given to the Jews at the Mercy-seat in the tabernacle; see *Exod.* xxv. 18-22. The Holy Scriptures are the Christian "oracles," *Rom.* iii. 2; 1 *Pet.* iv. 11. King Ahaziah sent to consult the oracle of Baalzebub at Ekron about 896 B.C. The Greeks consulted especially the oracles of Jupiter and Apollo (see *Dodona* and *Delphi*); and the Italians those of Faunus, Fortune, and Mars.

ORAN, Algeria (N. Africa), a Moorish city several times captured by the Spaniards; definitively occupied by the French in 1831, who have since added docks, &c.

ORANGE, a principality in S.E. France, formerly a lordship in the 9th or 10th century. It has been ruled by four houses successively: that of Giraud Adhemar (to 1174); of Baux (1182 to

1393); of Chalons (to 1530); and of Nassau (1530 to 1713); see *Nassau*. Philibert the Great, prince of Orange, the last of the house of Chalons, having been wronged by Francis I. of France, entered the service of the emperor Charles V., to whom he rendered great services by his military talents. He was killed at the siege of Florence, 3 Aug. 1530. He was succeeded by his nephew-in-law, René of Nassau; see *princes of Orange* under *Holland*. The eldest son of the king of Holland is styled the prince of Orange, although the principality was ceded to France in 1713. See *Arausio*.

ORANGE FREE STATE, a republic in South Africa, founded by Boers from Cape Colony in 1836. The British government proclaimed its authority over this territory, on 3 Feb. 1848, but declared it independent, 23 Feb. 1854. A constitution proclaimed, 10 April, 1854; revised, 1866, and 1879. The able president, sir John Henry Brand, first elected, 1863, died, 14 July, 1888. President Reitz elected, 11 Jan. 1889; re-elected, 27 Nov. 1893; resigns 17 Nov. 1895; Judge Steyn elected, 21 Feb. 1896. Defensive treaty with the Transvaal, about 13 March, ratified 25 May, 1889. Concession granted to the Cape Government to construct a railway to Bloemfontein, the capital, May, 1889; railway opened at Bloemfontein, 17 Dec. 1890. Population, 1885, 133,518; 1894, 207,503.

ORANGEMEN. The "Battle of the Diamond," 21 Sept. 1795 (see *Diamond*), and the treachery experienced by the Protestants on that occasion, convinced them they would become an easy prey to the Roman Catholics, from their small numbers, unless they associated for their defence, and consequently the Orange Society was formed in 1795. The first Orange lodge was formed in Armagh; but the name of Orangemen already existed. An Orange lodge was formed in Dublin; the members published a declaration of their principles (the maintenance of church and state under the house of Brunswick) in Jan. 1798. After 1813 Orangeism declined; but revived again in 1827, when the duke of Cumberland became grand-master; and it is stated that in 1836 there were 145,000 Orangemen in England, and 125,000 in Ireland. After a parliamentary inquiry Orange clubs were broken up in conformity with resolutions of the house of commons; but were revived in 1845—1889. In Oct. 1857, the lord chancellor of Ireland ordered that justices of the peace should not belong to Orange clubs. The Orangemen in Canada were greatly excited during the visit of the prince of Wales in Sept. 1860. Mr. Wm. Johnston, a grand master, convicted of violating the Party Processions Act, was elected M.P. for Belfast, Nov. 1869. See *Belfast*. The Orangemen vigorously oppose the home rule movement, see *Ulster*, 1892–3.

ORANGES. The sweet, or China orange, was first brought into Europe from China by the Portuguese, in 1547; and it is asserted that the identical tree, whence all the European orange-trees of this sort were produced, is still preserved at Lisbon, in the gardens of one of its nobility. Orange-trees were first brought to England, and planted, with little success, in 1595; they are said to have been planted at Beddington park, near Croydon, Surrey. The duty on imported oranges was repealed in 1860.

ORATOR HENLEY. An eccentric English gentleman of some talents, in 1726, opened his "oratory," a kind of chapel, in Newport-market, where he gave lectures on theological topics on Sundays, and on other subjects on Wednesdays, every week. Novelty procured him many hearers; but he was too imprudent to gain any permanent advantage. He removed his oratory to Clare-market, and sank into obscurity previously to his death, in 1756.

ORATORIANS (from the Latin *orare*, to pray), a regular order of priests established by St. Philip Neri, about 1564, and so called from the oratory of St. Jerome, at Rome, where they prayed. They had a foundation in France, commenced by Guillaume Gibieuf and Pierre de Berulle (afterwards cardinal), 1612, approved by pope Paul V. 1613.—The rev. Frederick Faber and others, as "Fathers of the Oratory," established themselves first in King William-street, Strand, in 1848, and afterwards at Brompton.

ORATORIO, a sacred musical composition, the subject of it being generally taken from the Scriptures. The origin of our oratorios (so named from having been first performed in an oratory), is ascribed to St. Philip Neri, about 1550. The first true oratorio, Emilio del Cavaliere's "Rappresentazione," was performed at Rome in 1600. He was followed by Giovanni Carissimi, Alessandro Scarlatti, &c. Bach's "Passion Music," the "St. Matthew," was produced at Leipzig on Good Friday, 1729, see *Passion-Week*. Handel composed 17 English oratorios; his first, "Esther," was performed at the Haymarket theatre, 2 May, 1732. "Israel in Egypt" was produced in 1738, and the "Messiah" in 1741; Haydn's "Creation" in 1798; Beethoven's "Mount of Olives," 1803; Spohr's "Last Judgment" (properly "Last Things"), 1825; Mendelssohn's "St. Paul" in 1836, and "Elijah" in 1846; Costa's "Eli," 1865; "Naaman," 1864; S. Bennett's "Woman of Samaria," 1867; Macfarren's "John the Baptist," 1873; Sullivan's "Prodigal Son," 1869; "Light of the World," 1873; "Martyr of Antioch," 1880, &c. Latterly the name has been modified, e.g., *Dramatic Oratorio*, such as Mackenzie's "Rose of Sharon;" Hubert Parry's "Judith," "Job," "King Saul" (1894), &c. *Sacred Trilogy*, Gounod's "Redemption," Berlioz's "Childhood of Christ;" or again as a form of *Dramatic Cantata*, as Schumann's "Paradise and the Peri," Sullivan's "Golden Legend," Mackenzie's "Dream of Jubal."

ORCHIDS, a natural order of plants of a very peculiar organization, recently much cultivated. In 1880, a great establishment for their cultivation was set up at St. Albans by Mr. Sander, "the orchid king," patronised by the Rothschilds, who introduced him to the queen at Waddesdon Manor, 14 May, 1890. The orchids at Blenheim sold for about 5,250*l*., 19–23 Dec. 1892.

ORCHOMENUS, a small Greek state in Bœotia, was destroyed by the Thebans, 367 B.C.; restored by Philip II. of Macedon, 354; and given up by him to Thebes, 346.

ORDEAL was known among the Greeks and Jews (*Num.* v. 2). It was introduced into England by the Saxons. A prisoner who pleaded not guilty might choose whether he would put himself for trial upon God and his country, by twelve men, as at this day, or upon God only. The trial by ordeal was abolished in 1218.

ORDER OF THE CORPORATE REUNION, virtually a new episcopal church, said to arise out of the Christian Unity Association (*which see*). It proposed to form four stations, (Canterbury, York, Caerleon, and St. Andrews,) with rectors and provincials; announced 11 Sept. 1877.

ORDERS, see *Knighthood.*

ORDERS IN COUNCIL were issued by the British government 7 Jan. and 11 Nov. 1807, prohibiting trade with the ports occupied by the French, being reprisals for Napoleon's *Berlin* and *Milan decrees* (see *Continental System*). They greatly checked the progress of manufactures in this country, and caused much distress and smuggling. They were repealed in regard to America, 18 June, 1812. The action under these orders led to the disastrous war with the United States in 1812–15.

ORDINANCES, see *Ordonnances, Self-Denying Ordinances.*

ORDINATION of ministers in the Christian church began with Christ and his apostles; see *Mark* iii. 14, and *Acts* vi. and xiv. 23. In England in 1549 a new form of ordination of ministers was ordered to be prepared by a committee of six prelates and six divines.

ORDNANCE OFFICE. Before the invention of guns, this office was supplied by officers under the following names: the bowyer, the crossbowyer, the galeater, or purveyor of helmets, the armourer, and the keeper of the tents. Henry VIII. placed it under the management of a master-general, a lieutenant, surveyor, &c. The master-general was chosen from among the first generals in the service of the sovereign. The appointment was formerly for life; but since the restoration, was held *durante bene placito*, and not unfrequently by a cabinet minister.—*Beatson.* The letters patent for this office were revoked 25 May, 1855, and its duties vested in the minister of war, lord Panmure. The last master-general was lord Fitzroy-Somerset, afterwards lord Raglan. The revival of the office recommended by the Ordnance Commission (see under *Army*, 1886).

ORDNANCE SURVEY. The trigonometrical survey of England was commenced by gen. Roy, in 1784, continued by col. Colby, and completed by col. (aft. sir Henry) James in 1856. The publication of the maps (scale 7 inches to a mile), commenced in 1819, under the direction of col. Mudge, and was completed in 1862; a large part of these maps have been coloured geologically. The survey of Ireland (6 inches to a mile) has been completed and published; that of Scotland, completed Nov. 1882. By the survey act, passed 12 May, 1870, the ordnance survey was transferred to the Board of Works, and by an act passed in 1889, to the Board of Agriculture, beginning 1 April, 1890. Directors, lieut.-gen. John Cameron, succeeded sir Henry James in 1875, died 30 June, 1878; col. A. C. Cooke; col. R. H. Stotherd, 1885. In 1892, several sets of maps were in course of publication or preparation. The Ordnance Survey maps having been considered deficient, a departmental committee was appointed in April, 1892, and met during the year; sir John Dorington, M.P., chairman. Report, with recommendations, presented to the Board of Agriculture, 31 Dec. 1892; published, 6 March, 1893.

ORDONNANCES, the laws enacted by the Capetian kings of France previous to 1789. They began with "in the name of the king," and ended with "such is our good pleasure." The first in French is dated 1287 (Philip IV.) The publication of these "ordonnances," ordered by Louis XIV., 1706, is still in progress. The "ordonnances" of Charles X., promulgated 26 July, 1830, led to the revolution.

OREGON TERRITORY (N. America), is said to have been visited by Drake in 1579. Lieut. Broughton took possession of part of it for Great Britain in 1792. In 1810 a settlement named Astoria, was founded by a New York Company. Oregon was occupied by the English in 1814, but was claimed by the United States government, to whom the greater part was ceded, after much negotiation, by the treaty of 12 June, 1846. Oregon was made a territory in 1848, and admitted as a state, Feb. 1859. Capital, Salem. Population, 1880, 174,768; 1890, 313,767.

ORGAN, a development of the pandean pipes; the "*organ*" in *Gen.* iv. 21 should be translated *pipe.* The invention is attributed to Ctesibius, a barber of Alexandria, about 250 B.C.; and to Archimedes, about 220 B.C. The organ was brought to Europe from the Greek empire, and was applied to religious devotions in churches, about A.D. 657. —*Bellarmine.* Organs were used in the western churches by pope Vitalianus, in 658.—*Ammonius.* It is affirmed that the organ was known in France in the time of Louis I., 815, when one was constructed by an Italian priest. The organ at Haarlem is one of the largest in Europe; it has 60 stops and 8000 pipes. At Seville is one with 110 stops and 5300 pipes. The organ at Amsterdam has a set of pipes that imitate a chorus of human voices. Of the organs in ENGLAND that at St. George's Hall, Liverpool, by Mr. Willis, was the largest; next in order that at York minster, and that in the music-hall, Birmingham. In London, the largest was, perhaps that of Spitalfields church; and that in Christ Church was nearly as extensive. The erection of the famous Temple organ was competed for by Schmidt and Harris; after long disputes, the question was referred to vote, and Mr. Jefferies, afterwards chief justice, gave the casting vote in favour of Schmidt (called Father Smith), about 1682. A monster organ was erected in the Crystal Palace, Sydenham, in June, 1857. The organ, by Willis, at the Royal Albert Hall, is now said to be the largest in the world; 1871. A larger proposed for a cathedral in Long Island, North America, 1880. A noble organ (by Bryceson), with many appliances, opened in the hall, Primrose-hill-road, London, N. Jan. 1876; see *Westminster Abbey*, 1895.

Barrel organs are said to have been first made early in the 18th century. The finest was the *Apollonicon* (*which see*).
William Thos. Best, born 1826, virtuoso player, died at Liverpool, 10 May, 1897.

its name from a tenement called *l'Oriole*, on the which the building stands.

ORIFLAMME, see *Auriflamma*.

ORIGENISTS pretended to draw their opinions from the writings of Origen, who lived 185-253. They maintained that Christ was the son of God in no other way than by adoption and grace; that souls were created before the bodies; that the sun, moon, stars, and the waters that are under the firmament, have souls; that the torments of the damned shall have an end, and that the fallen angels shall, after a time, be restored to their first condition. They were condemned by councils, and the reading of Origen's work was forbidden.—*Burke.* These doctrines were condemned by the council of Constantinople in 553.

"ORIGIN OF SPECIES, BY MEANS OF NATURAL SELECTION" by Charles Robert Darwin, F.R.S., first published, 24 Nov. 1859. He was born 12 Feb. 1809, died 19 April, 1882. See *Species*.

ORION STEAM-SHIP. On 18 June, 1850, this splendid vessel, bound from Liverpool to Glasgow, struck on a sunken rock, northward of Portpatrick, within a stone's throw of land, and instantly filled. Of two hundred passengers more than fifty were drowned.

ORISSA, an ancient kingdom of India, now a province of N. W. Bengal, conquered by Clive in 1755, and nearly all acquired by the company in 1765. It suffered much by famine in 1770, and 1792-3, and more especially from the end of 1865 to Nov. 1866, when it is said about 750,000 persons perished. The government and officials were censured for neglect and want of forethought. It is also said that during a hurricane in Oct. 1836, 22,500 persons were drowned.

ORKNEY AND SHETLAND ISLES (North of Scotland), were conquered by Magnus III. of Norway, 1099, and were ceded to James III. as the dowry of his wife Margaret, in 1469. The Orkneys were the ancient Orcades; united with Shetland, they now form one of the Scotch counties. The bishopric of Orkney, founded by St. Servanus early in the 5th century, some affirm by St. Colm, ended with the abolition of episcopacy in Scotland, about 1689; see *Bishops in Scotland*. Orkney and Zetland small piers and harbours act passed, 14 Aug. 1896.

ORLEANS (a city in central France), formerly *Aurelianum;* gave title to a kingdom, 491, and afterwards to a duchy, usually held by one of the royal family. Attila the Hun, besieging it, was defeated by Aetius and his allies, 451. It was besieged by the English under earls of Salisbury and Suffolk, 12 Oct. 1428, bravely defended by Gaucour (as its fall would have ruined the cause of Charles VI. king of France), and relieved by the heroism of Joan of Arc, afterwards surnamed the Maid of Orleans, 29 April, 1429, and the siege was raised 8 May; see *Joan of Arc*. (The 439th anniversary was celebrated 10 May, 1868; the emperor and empress being present.) During the siege of Orleans, Feb. 1563, the duke of Guise was assassinated.

After nine hours' severe fighting, Orleans captured by the Germans, under general Von der Tann. More than 4000 prisoners were taken. The loss on both sides was heavy. About 35,000 on each side were engaged. The city was made to pay a war contribution of 60,000*l*. . . 11 Oct. 1870

Von der Tann and the Bavarians defeated by generals D'Aurelle de Paladines and Pallières, and Orleans re-taken. The Germans acknowledged the loss of about 700 men and 1000 prisoners, chiefly wounded. The French asserted the numbers of both to be higher, and were much cheered with their victory. The French loss was heavy. Orphan houses properly so called are mentioned for the first time in the laws of the emperor Justinian. At the court of Byzantium the office of inspector of orphans, *orphanotrophos*, was so honourable that it was held by the brother of the emperor Michael IV. in the 11th century; see *Foundling Hospitals.*

ORRERY, a planetary machine to illustrate and explain the motions of the heavenly bodies, appears to have been coeval with the clepsydra. Ptolemy devised the circles and epicycles that distinguish his system about 130. The planetary clock of Finée was begun 1553. The planetarium of De Rheita was formed about 1650. The planetarium, now termed the Orrery, it is said, was constructed by Rowley, after a pattern devised by the clock-maker, George Graham, at the expense of Charles Boyle, earl of Orrery, about 1715. A large "planetarium" was constructed by the rev. Wm. Pearson, for the Royal Institution, London, about 1803. An excellent planetarium, constructed in London by signor N. Perini, was exhibited in Dec. 1879.

OSTEND (Belgium). An important sea-port in the 11th century, was destroyed by the sea 1334, rebuilt and afterwards walled by Philip the Good, the duke of Burgundy, 1445; sustained a siege by the

Spaniards, from July, 1601, to Sept. 1604, when it honourably capitulated. On the death of Charles II. of Spain, the French seized Ostend; but in 1706, after the battle of Ramilies, it was retaken by the allies. It was again taken by the French in 1745, but restored in 1748. In 1756, the French garrisoned this town for the empress-queen Maria Theresa. In 1792, the French once more took Ostend, which they evacuated in 1793, but regained in 1794. The English destroyed the works of the Bruges canal; but the wind shifting before they could re-embark, they surrendered to the French, 19 May, 1798. OSTRACISM (from the Greek *ostrakon*, a potsherd or shell), a mode of proscription at Athens, is said to have been first introduced by the tyrant Hippias; others ascribe it to Cleisthenes, about 510 B.C. The people wrote the names of those whom they most suspected upon small shells; these they put in an urn or box and presented to the senate. Upon a scrutiny, he whose name was oftenest written was sentenced by the council to be banished from his altar and hearth. 6000 votes were required. Aristides, noted for his justice, and Miltiades, for his victories, were thus ostracized. The custom was abolished by ironically proscribing Hyperbolus, a mean person, about 338 B.C.

OTAHEITE or TAHITI, an island in the S. Pacific Ocean, seen by Byron in 1765, and visited in 1767 by captain Wallis, who called it George the Third Island. Captain Cook came hither in 1768 to observe the transit of Venus; sailed round the whole island in a boat, and stayed three months; he visited it twice afterwards. See *Cook*. Omai, a native of this island, was brought to England by Cook, and carried back in his last voyage. In 1799, king Pomare ceded the district of Matavai to some English missionaries. Queen Pomare was compelled to put herself under the protection of France, 9 Sept. 1843. She retracted, and Otaheite and the neighbouring islands were taken possession of by admiral Dupetit-Thouars in the name of the French king, Nov. 1843. The French imprisoned Mr. Prichard, the English consul, 5 March, 1844, but the act was censured in France.

The people would not submit to this insult, and their resistance brought on hostilities, and captain Cook and some of his companions were killed. OXFORD'S ACT, BISHOP OF, see *District Churches.*

OXFORD'S ASSAULT ON THE QUEEN. Edward Oxford, a youth who had been a servant in a public-house, discharged two pistols at queen Victoria and prince Albert, as they were proceeding up Constitution-hill in an open phaeton from Buckingham palace, 10 June, 1840. He stood within a few yards of the carriage, but neither her majesty nor the prince was injured. Oxford was tried at the Old Bailey (10 July), and was adjudged to be insane, and sent first to Bethlehem hospital, next to Broadmoor : and set at liberty in 1868, on condition of going abroad.

OXUS (the Persian and Turkish Djihoun, local name, Amou Daryá), a river of Central Asia ; supposed to have changed its course before 1000 A.D., and to have resumed its ancient bed in 1878. The Oxus navigated as far as Faizabad Kali (Afghan frontier) by the Russians under adm. Baturin; reported, 11 Dec. 1894.

OXYGEN, a gas (named from the Greek *oxus*, sharp, as being generally found in acids), is the most abundant of all substances, constituting about one-third of the solid earth, and forming about nine-tenths of water and one-fifth of the atmosphere. It was first separated from red oxide of mercury by Priestley, 1 Aug. 1774, and by Scheele, who was ignorant of Priestley's discovery, in 1775. It is a supporter of animal life (in respiration), and of combustion. An oxygen gas company was announced in Dec. 1864 ; its object being the cheap manufacture of oxygen for its application to the production of perfect combustion in lamps, stoves, furnaces, &c. It is now largely produced with about 5 per cent. of inert nitrogen by the Brin method from atmospheric air (1893). Oxygen was liquefied by Raoul Pictet at Geneva ; (pressure, 320 atmospheres, temp. 140 below zero Cent.) 22 Dec. 1877. See *Ozone.*

Professor Dewar obtained 2 cubic centimetres ($\frac{1}{10}$ of a fluid oz.) of liquid oxygen by means of liquid ethylene (the illuminating part of coal gas), temp. 140° below zero Cent. (by Wroblewski and Olzewski's method) at the Royal Institution, London, in the presence of the prince and princess of Wales, 26 June, 1884. He exhibited for the first time some solid oxygen in the form of snow (temperature −200 cent. −400 fahr.) produced by placing liquid oxygen in a partial vacuum at the Royal Institution 27 May, 1886.

Professor Dewar exhibited between 300 to 400 centitimetres liquid oxygen at the Faraday Centenary, 26 June, 1891. The feeble magnetism of oxygen, demonstrated by Faraday, was shown by Professor Dewar to be greatly increased when reduced to the liquid state by a temperature of 180° below zero centigrade ; announced 10 Dec. 1891. Some liquid oxygen placed in the magnetic field, sprang to the poles and adhered to them till evaporated ; this was publicly exhibited by the professor at the Royal Institution, 10 June, 1892. Several pints of liquid oxygen and liquid air were then produced in the presence of the audience.

At the Friday evening meeting of the Royal institution, 20 Jan. 1893, prof. Dewar exhibited some of the remarkable properties of liquid oxygen and air, and he showed how the liquid state could be maintained longer by surrounding it with a very high vacuum. These costly experiments had been aided by a gift of 1,000*l.* from the Goldsmiths' company. The lecture and experiments were repeated before the prince of Wales, the duke of York, and a distinguished company, 22 Feb. 1893. Prof. Dewar reported to the Royal society that he had obtained solid air in the form of ice, a mysterious body, 9 March, 1893. Further researches reported, 22 Jan. 1897.

Prof. Dewar was awarded the Rumford medal of the Royal society in 1894.

A statue of Priestley, by F. J. Williamson, at Birmingham, was unveiled by professor T. H. Huxley, 1 Aug. 1874, the centenary of the discovery of oxygen. This was also celebrated at Northumberland, Pennsylvania, where he was buried, Feb. 1804. The following telegram was sent 31 July : "The brethren at the grave to the brethren at the home of Priestley send greeting on this centennial anniversary of the birth of chemistry."

A method of obtaining oxygen from air, devised and patented by M. Margis, of Paris. The principle is that of dialysis, or diffusion under pressure, Sept. 1882. See *Gas* (liquefaction).

By the explosion of a cylinder of compressed oxygen, the carrier was killed, 15 March, 1895.

OYER AND TERMINER, a commission directed to the judges of the courts, by virtue whereof they have power to *hear and determine* treasons, felonies, &c., 1285.

O YES! A corruption of the French *oyez*, hear ye! The ancient term still used by a public crier and by the usher of courts of justice to enjoin silence and attention.

OYSTER (the Latin *Ostrea edulis*). British oysters are celebrated by the Roman satirist Juvenal (Sat. iv. 140) about 100. The robbery of oyster-beds is prohibited by 7 & 8 Geo. IV. c. 29 (1827) About 15,000 bushels of oysters were said to be produced from the Essex beds alone. In 1858 M. Coste commenced rearing oysters in great numbers on the coast of Brittany, and his plan has been found successful.

An act for promoting the cultivation of oysters in the United Kingdom, passed . . Aug. 1866
One for the preservation of oyster fisheries 3 May, 1867
Certain restrictions of the Oyster Fisheries act, 1862, removed by the Fisheries act . . . 1868
The fisheries (oyster, crab, and lobster) act forbids the sale of deep-sea oysters between 15 June and 4 August ; and the sale of others, between 14 May and 4 August ; passed . . . 10 Aug. 1877
Professor Huxley at the Royal Institution asserts the uselessness of restrictions and a close time for oysters, and the present uncertainty of culture 11 May, 1883
Artificial breeding greatly promoted by professor Brooks of Baltimore, (who discovered non-hermaphrodite) lieutenant Winslow, U.S., and M. Bouchen-Brandely, announced . . . June, 1884
Act for the cultivation of oysters in Ireland passed ,,
Oysters, about 1830 the commonest of food, are now becoming scarcer and scarcer, although their reproduction is about a million-fold. A committee recommend a close time for dredging, viz. 1 May to 1 Sept., deep-sea fishing to be restricted, as at present, from 15 June to 15 Aug. ; no oyster to be sold under 2½ inches in diameter. The Whitstable beds in 1875 are said to have produced about 79,564,000 oysters ; value about 55,140*l.*
American and Portuguese oysters are now largely imported.
Oysters successfully cultivated at Arcachon, near Bordeaux, 1889.

OZOKERIT, a mineral hydro-carbon found in Moldavia and Wallachia. From it is distilled a substance suitable for making candles, introduced in the autumn of 1871.

OZONE (from the Greek *ozein*, to yield an odour), was discovered by Schönbein, of Basel, in 1840, when experimenting with the then newly-invented battery of sir Wm. Grove, and was recognised by him successively as a minute constituent of the oxygen gas resulting from the electrolysis of water effected by a current of high tension; of air or oxygen through which electric discharges have taken place; and of air in which moist phosphorus has been undergoing slow oxidation.

Marignac determined the action of ozone on various substances to be due to their oxidation . . 1845

Ozonometers constructed 1858

M. Schönbein announced his discovery of another modification of oxygen, which he termed *antozone*, hitherto found only in the compound state (in peroxides of sodium, potassium, &c.) . . 1859

The French Academy of Sciences appointed a committee of eminent philosophers to inquire into the nature and relations of ozone . 4 Dec 1865

Andrews and Tait demonstrated ozone to be a condensed form of oxygen . . . . . 1860, ,,

This further established by Soret and Brodie, by quantitative reactions. (Odling suggested and Brodie proved ozone to be 3 parts of oxygen compressed into the space of 2) 1872

Liquefied by Hautefeuille and Chappuis . Oct. 1880

PADLOCKS are said to have been invented by Beecher at Nuremberg, 1540, but are mentioned much earlier.

PADUA, the Roman Patavium, in Venetia, N. Italy, said to have been founded by Antenor, soon after the fall of Troy. It flourished under the Romans. Patavian Latin was considered very corrupt, and is traced in Livy, a native of Padua. After being an independent republic, and a member of the Lombard league, Padua was ruled by the Carrara family from 1318 with a short interruption till 1405, when it was seized by the Venetians. The university was founded about 1220. It was closed through disturbances, 1848-50.

A person who called himself John Anthony Palæologus Lascaris died at Turin, Sept. 1874. His claims were doubted.

PALÆONTOLOGY (from the Greek *palaios*, ancient, and *onta*, beings), treats of the evidences of organic beings in the earth's strata. It combines biology and geology (*which see*). Wm. Buckland, Cuvier, Mantell, Agassiz, Owen, Edward Forbes, and Blainville, all of the present century, may be reckoned as fathers of this science. The Palæontographical society, which publishes elaborate monographs of British organic remains, was founded in 1847. The journal "Palæontographica" (German) began 1851. Professor Owen's "Palæontology" was published in 1860. "Nearly 40,000 species of animals and plants have been added to the Systema Naturæ by palæontological research." *Huxley.* See *Man.*

PALAIS ROYAL, Paris, originally Palais Cardinal, built for cardinal Richelieu by Lemercier, 1620-36, received its present name when occupied by Louis XIII., to whom the cardinal gave it shortly before his death in 1642. Louis XIV., in 1692, gave it to his nephew Philippe, duke of Orleans, and it became the residence of his successors. It was confiscated by the republic in 1793, after the execution of Philippe Egalité. Louis Philippe resided in it, 1814-31. It suffered much injury at the revolution in 1848. Under the second empire it became the residence of prince Jerome and his son Napoleon. The buildings were much injured by fire by the communists, 24 May, 1871.

PALATINATE OF THE RHINE, one of the seven ancient electorates of Germany. It was long united to Bavaria, but was separated in 1294.—Frederic V., the elector palatine in 1610, married in 1613 Elizabeth, the daughter of James I. of England, and thus was an ancestor of queen Victoria; see *Hanover.* In 1619 he was elected king of Bohemia, but lost all by his defeat by the Austrians at Prague in 1620. The Palatinate was horribly ravaged by Tilly in 1622, and by the French in 1688. Several thousands of the ruined peasantry were sent to America by the British government and people. The elector palatine, Charles Theodore, inherited Bavaria in 1778; since when the two electorates have been united; see *Bavaria.*

PALATINE. William the conqueror made his nephew, Hugh De Abrincis, count palatine of Chester with the title of earl, about 1070. Edward III. created the palatine of Lancaster, 1539; see *Lancaster, duchy of.* The bishopric of Durham also made county palatine. There is also mention made of the county palatine of Hexham, in 33 Henry VIII. c. 10, which then belonged to the archbishop of York, but by the 14th of Elizabeth it was dissolved, and made part of the county of Northumberland. The palatinate jurisdiction of Durham was separated from the diocese, and vested in the crown, 6 Will. IV. c. 19, 21 June, 1836.

PALE, the name given to the part of Ireland colonised by the English—viz., parts of the counties of Louth, Dublin, Meath, and Kildare. Anglo-Irish rulers were termed lords of the pale. Their arbitrary exactions led to a royal commission of inquiry in 1537. The defection of the lords of the pale in 1641 was followed by a general insurrection, and the royal cause was ruined in 1647. In 1652 Ireland was committed to the rule of four commissioners.

PALERMO (N. W. Sicily), the ancient Panormus. It has been held by the Carthaginians, 415 B.C.; taken by the Romans, 254 B.C.; by the Saracens, A.D. 832; and by the Normans, 1072. Here Roger II. was crowned king of Sicily, 1130. Palermo was the scene of the Sicilian Vespers (*which see*), 30 March, 1282. It suffered from earthquake in 1726 and 1740. The king Ferdinand resided at Palermo from 1806 to 1815, while Naples was ruled by Joseph Bonaparte and Joachim Murat. It revolted against the tyranny of Ferdinand II. 12 Jan. 1848. It was attacked by general Filangieri, 29 March, 1849, and surrendered on 14 May. It was taken by Garibaldi, 6 June, 1860. An insurrection against the abolition of the monastic establishments broke out in Palermo on 13 Sept. 1866, and was suppressed by the royal troops with much bloodshed; order was restored by 22 Sept. After being several times conquered by the Saracens, and retaken from the 7th to the 10th century, and after being the scene of the wars of the Crusades (*which see*), and other conflicts, Palestine was united to the Ottoman empire by Selim I. in 1516. See *Bible* (note), *Holy Places*, and *Syria*.

Cardinal Mai, by removing the second writing in some MSS., recovered the original. This was the case with Cicero's "De Republicâ," published by Mai in 1821. It had been covered by a treatise of Lactantius.

PALL, PALLIUM, in the Roman Church an ensign of dignity conferred by the pope upon archbishops. By a decretal of pope Gregory XI. (about 1370), no archbishop could call a council, bless the chrism, consecrate churches, ordain a clerk, or consecrate a bishop, till he had received his pall from the see of Rome. The pall was first worn by an Irish archbishop in 1152, when Gelasius was recognised as primate of all Ireland.

PALLADIUM, the statue of Pallas, said to have fallen from heaven near the tent of Ilus, as he was building Ilium, which the oracle of Apollo declared should never be taken so long as the Palladium was found within its walls. The Greeks are said to have obtained it by craft during the Trojan war, 1184 B.C.; but some writers assert, another statue was taken, and that the real Palladium was conveyed from Troy to Italy by Æneas, 1183 B.C., and preserved by the Romans with the greatest secrecy in the temple of Vesta.—PALLADIUM is a rare metal, discovered in platinum ore by Dr. Wollaston, in 1803.

PALLAS, the planet, was discovered by Olbers, at Bremen, 28 March, 1802.

PALLISER'S CHILLED SHOT, see *Cannon*.

PALL MALL, a street near St. James's palace, London, is named from a French game at ball (*pale-mail*, being a wooden mallet), resembling the modern croquet, having been played there about 1600, and introduced into England about 1660. Among eminent inhabitants were Nell Gwyn and Dr. Thomas Sydenham. The PALL MALL GAZETTE, a daily independent political and literary journal, first appeared 7 Feb. 1865, and was edited by Mr. Frederick Greenwood till 1 May, 1880, when it became a liberal paper, edited by Mr. John Morley, who retired 25 Aug. 1883. Lord Canning was appointed governor-general of India, 4 July, 1855. PALMISTRY, or Chiromancy, the art of studying the lines in the palm, to discover the character and fortunes of a person, practised in ancient India and Greece. The subject was noticed by Aristotle, Pliny, Paracelsus, Albertus Magnus, and Cardan. A work by Johann Hartlieb was published in Augsburg, 1475. M. le capitaine d'Arpentigny and M. Adrien Desbarrolles are chief modern authorities. A. R. Craig's "Book of the Hand" (1867), L. Cotton's "Palmistry" (1890). Dr. F. Galton published his study of "Finger Prints," 1893. See *Fortune Telling*. Sophia Robson, *alias* "Minerva," professor of palmistry, fined 25*l*. for pretending to tell fortunes, 15 Feb. 1895.

PALM-SUNDAY. When Christ made his entry into Jerusalem, multitudes of the people who were come to the feast of the Passover, took branches of the palm-tree, and went forth to meet him, 33. It is usual, in some countries, to carry palms on the Sunday before Easter, hence called Palm-Sunday.

PALMYRA (Syria) was supposed to have been the Tadmor in the wilderness built by Solomon, but was manifestly Grecian. The brilliant part of the history of Palmyra was under Odenatus and his queen Zenobia. At the death of Odenatus, Zenobia assumed the title of queen of the East, in 267. Aurelian defeated her at Emesa, in 272, and made her captive, 273, and killed Longinus, the philosopher, her friend. Palmyra is now inhabited by a few Arab families. The ruins were visited in 1751, by Mr. Wood, who published an account of them in 1753. The rev. Dr. W. Wright published "Palmyra and Zenobia" in 1895.

PAMPHLETS. Their first appearance amongst us is generally thought to have been in opposition to the church of Rome. Those who were first convinced of the reasonableness of the "new learning," as it was then called, propagated their opinions in small pieces, cheaply printed, and (what was then of great importance) easily concealed. Political pamphlets began in Edward VI.'s time, and were very numerous in the 17th and 18th centuries (by De Foe, Swift, Steele, and others).

Paul Louis Courier wrote "Simple Discours" and other pamphlets against the priests and nobles after the restoration of the Bourbons, 1815. His "Pamphlet des Pamphlets," defending the pamphleteer (published, 1824), probably led to his murder, 10 April, 1825.
Large collections are in the libraries of the British Museum and the Royal and London Institutions.
Certain enactments respecting pamphlets removed by an act passed July, 1860.

A treaty for the construction of a ship canal through the isthmus by the United States was signed by representatives of that government and that of Colombia 26 Jan. 1870. A railway was opened in 1855. In that year a new state, New Granada, was divided into eight federal states, one

of which is named PANAMÁ. A revolution took place in Panamá, on 9 March, 1865; the government was deposed, and don Jil Colunje became president; succeeded by Vincent Olarte, 1 Oct. 1866. Panamá is now subject to Colombia (*which see*). PANOPTICON OF SCIENCE AND ART, in Leicester-square, erected in 1852-3 for a chartered company, by Mr. T. H. Lewis, the architect; was opened in 1854 for lectures, musical performances, &c. It had a very large electrical machine, battery, &c. PANORAMAS, invented by Robert Barker, are bird's-eye views painted round the wall of a circular building. In 1788 he exhibited at Edinburgh a view of that city, the first picture of the kind. He then commenced similar exhibitions in London in 1789, having adopted the name "*Panorama*," and was ultimately enabled to build commodious premises in Leicester-square for that purpose. Panoramas were exhibited on the continent by himself and his associate, Robt. Fulton. M. Thuyer, having bought the invention from Fulton, exhibited panoramas in Paris about 1796. See *Colosseum.* (Barker died in April, 1806.) J. P. Loutherbourg, a painter, termed the panoramist, invented the "Eidophusikon," natural phenomena represented by moving pictures, exhibited at Lisle-street, Leicester-square, 3 April, 1781. "This was certainly not a panorama." *Dr. Rimbault.*

PANTAGRAPH (from the Greek *panta*, all things, and *graphein*, to write, and incorrectly termed *Pentagraph*), an instrument for copying, reducing, or enlarging plans, &c., invented by Christopher Scheiner, about 1603; improved by professor Wallace, and called "Eidograph," about 1821.

PANTHAYS, Mahometans in the Chinese province, Yunan, became independent under a sultan, during the Tae-ping revolt, 1851-64. After its suppression, the Panthays, after a severe struggle, were also subdued. Their capital, Talifoo, was captured, and its inhabitants cruelly massacred in Feb. 1873. The Panthays sent an embassy to England in 1872, without effect. Sultan Suleiman committed suicide.

PANTHEISM, the formula of which is "everything is God, and God is one," was especially taught by Xenophanes, who died 500 B.C. The doctrine is attributed to Spinoza, Kant, Fichte, and other modern philosophers. Amalric of Chartres, censured for holding the doctrine, recanted 13th century. He is said to have asserted that "all is God, and God is all."

PANTHEON, at Rome, a circular temple built by Agrippa, the son-in-law of Augustus, 27 B.C. It had niches in the wall, where the image or representation of a particular god was set up; the gates brass, the beams covered with gilt brass, and the roof covered with silver. Pope Boniface III. dedicated it to the Virgin Mary and all the saints, by the name of S. Maria della Rotunda, or "ad Martyres," A.D. 608.*—The **PANTHEON IN LONDON** was erected by subscription, and opened 27 Jan. 1772; formed into an opera house; burned down 14 Jan. 1792; rebuilt for masquerades in 1795; opened as theatre, 1812; made a bazaar in 1834.

PANTOGEN, see *Atomic Theory*.

PANTOMIMES were representations by gestures and attitudes among the Greeks, and were introduced on the Roman stage by Pylades and Bathyllus, 22 B.C. Comic masques were introduced here from Italy about 1700. The first regular English pantomime is said to have been "Harlequin executed," produced by John Rich at the Lincoln's-inn-fields theatre, 26 Dec. 1717. Joseph Grimaldi (1779-1837) was a most eminent clown.

"PAPAL AGGRESSION." In a consistory holden in Rome, 30 Sept. 1850, the pope (Pius IX.) named fourteen new cardinals, of whom four only were Italians. Among them was Dr. Nicholas Wiseman, vicar-apostolic of the London district, who was at the same time nominated lord archbishop of Westminster.

The answer of the bishop of London (Dr. Blomfield) to a memorial from the protestant clergy of Westminster, against a Romish hierarchy in this country, was followed by the "Durham" letter from lord John Russell, then chief minister of the crown, to the bishop of Durham, in which he severely censured, not only the papal aggression, but also the proceedings of the tractarian clergy of the Church of England . . . 4 Nov. ,,

PAPAL INFALLIBILITY. This dogma, maintained by one party in the Roman church, tolerated by another, and utterly rejected by a third, was adopted and promulgated at the general council at Rome 18 July, 1870, a great many bishops having withdrawn. The dogma was inculcated by the false decretals of Isidore and others, but not adopted by the council of Trent; see *Councils XXI.* Professor Döllinger, the historian, was excommunicated at Munich for rejecting this dogma, 18 April, 1871: he was made a D.C.L. at Oxford about 16 June following; see *Old Catholics*. The doctrine was strenuously attacked by Mr. W. E. Gladstone, in his pamphlet, "The Vatican Decrees," Nov. 1874.

PAPER, see *Papyrus*. Paper was probably made in Egypt, and centuries before the Christian era. It was made of cotton about 600 A.D.; and of rags about 1300.* White coarse paper was made by sir John Speilman, a German, at Dartford, in England, 33 Eliz. 1580; and here paper mills were erected. *Stow*. Paper for writing and printing manufactured in England, and an act passed to encourage it, 2 Will. III. 1690; before this time we paid for these articles to France and Holland 100,000*l.* annually. The French refugees taught our people; we had made coarse brown paper almost exclusively, until they came among us; we made white paper first in 1690. *Anderson*. Paper-making by a machine was suggested by Louis Robert, who sold his model to Didot, the great printer, who brought it to England, and, conjointly with Fourdrinier, perfected the machinery. The latter obtained a patent for paper-making machinery in 1801; and for manufacturing paper of an indefinite length in 1807. The machinery was improved by Bryan Donkin. A sheet of paper, 13,800 feet long, and 4 feet wide, was made at Whitehall-mills, Derbyshire, in 1830; and one 21,000 feet long, and 6 feet 3 inches wide, was made at Colyton in Devon in 1860. Esparto, a Spanish grass, first imported in 1857, has been largely employed in the paper manufacture since 1864. In 1866 wood was largely manufactured into paper at Philadelphia; and at the Paris exhibition, 1867, fine specimens of wood-paper were shown; see *Parchment* (note). The paper duty, imposed in 1694 (producing, latterly, about 1,400,000*l.* annually), after having been the subject of agitation for several years, was repealed in 1861. Hop-stalks said to be used for paper-making in France, 1873.

Paper-mills in Great Britain, 1877, about 385 (England, 300; Scotland, 65; Ireland, 20); annual produce about 360,000 tons; value, 16,090,000*l.* Great increase since.

PAPER-HANGINGS, &c. Stamped paper for this purpose was first made in Spain and Holland about 1555. Made of velvet and floss, for hanging apartments, about 1620. The manufacture of this kind of paper rapidly improved in this country during the present century. — PAPER BRICKS have been made in America; and paper tubing for water and gas, made by M. Jaloureau of Paris, was shown in 1860.

PAPIER MACHÉ. This manufacture (of paper-pulp combined with gum and sometimes with china clay) has existed for above a century. Martin, a German snuff-box maker, is said to have learnt the art from one Lefevre about 1740. In 1745 it

* Mr. Joseph Hunter (in the *Archæologia*, xxxvii.) states that the earliest paper which he had seen was a MS. account-book, dated 1302, probably of Bordeaux manufacture. He gives engravings of manufacturers marks, French and English, the dates of which range from 1330 to 1431. He also gives an extract from a work by Bartholus, a writer of the middle of the 14th century, in which mention is made of a paper manufactory in the Marches of Ancona. At the end of Wynkin de Worde's edition of Bartholomæus De Proprietatibus Rerum, 1494, its thin paper, *made by John Tate in England*, commended.

was taken up by Baskerville, the printer at Birmingham, and soon spread over that district. Papier maché is now largely employed in ornamenting the interior of buildings, &c. A large dome at Brussels ordered to be made of it, Dec. 1881.

PAPYRUS, the reed from which was made the paper of Egypt and India, used for writings until the discovery of parchment, about 190 B.C. The earliest known specimens of papyri were found in the monuments attributed to the third dynasty, 3966 B.C. Many papyri were discovered at Herculaneum in 1754; and many were collected by the French in Egypt, 1798. A manuscript of the *Antiquities of Josephus* on papyrus, among the treasures seized by Bonaparte in Italy, and sent to the National Library at Paris, was restored in 1815.

Fac-similes of the largest known papyrus, found in 1855, behind Modinet Habu on the Nile, and now in the British Museum, were published with translations by the trustees in 1876.

PARADOX (Greek, *para*, beyond; and *doxa*, opinion), something contrary to common opinion. Professor De Morgan's "Budget of Paradoxes" (of all kinds) was published in 1872. John Paget's "Paradoxes and Puzzles, Historical, Judicial, and Literary," published 1874.

PARAFFIN (from *parum affinis*, from its having little affinity with anything), also called photogen, a solid substance, somewhat like spermaceti, produced by distillation of coal, and first obtained by Reichenbach in 1830, and by Dr. Christison about the same time. It was procured from mineral oil by Mr. James Young about 1848 at Alfreton in Derbyshire. Soon after it was largely obtained from Boghead coal. It is also obtained from Irish peat. It makes excellent candles. Much litigation ensued through interference with Mr. Young's patent-right. In 1882, 120,508 cwts. were imported into the United Kingdom; in 1896, 725,398 cwts.

America, discovered by Juan Diaz de Solis in 1515, and by Sebastian Cabot in 1526; conquered by Alvarez Nuñez in 1535, and civilized by the Jesuits, who in 1608 commenced their missions there and held it till their expulsion in 1768. Paraguay rose against the Spanish yoke in 1811. In 1814, Dr. José G. R. Francia was elected dictator; he ruled vigorously but tyrannically; he was succeeded on his death in 1840 by Vibal. From 1814 to 1844 the country was rigidly closed against foreigners. The president, C. A. Lopez, elected in 1844, was succeeded by his son, Francis S. Lopez, Sept. 1862 (*see below*). PARCHMENT. Invented for writing books by Eumenes (some say by Attalus), of Pergamus, the founder of the celebrated library at Pergamus,

formed on the model of the Alexandrian, about 190 B.C. Parchment-books from this time became those most used, and the most valuable as well as oldest in the world are written on the skins of goats. It should be mentioned that the Persians and others are said to have written all their records on skins long before Eumenes' time.

Parchment paper (or vegetable parchment) was invented and patented in 1857, by Mr. W. E. Gaine, C.E., who discovered, that when paper is exposed to a mixture of two parts of concentrated sulphuric acid and one part of water for no longer time than is required to draw it through the fluid, it is immediately converted into a strong tough skin-like material. It must be instantly washed with water. Its great strength points out many applications of this material, *e.g.*, maps, school and account-books, and drawing-paper. In 1859 it appeared that a similar invention had been made in Paris by Figuier and Poumarède in 1846.

PARDONS. General pardons were proclaimed at coronations: first by Edward III. in 1327. The king's power of pardoning is said to be derived *a lege suæ dignitatis;* and no other person has power to remit treason or felonies, stat. 27 Hen. VIII. 1535. *Blackstone.* A pardon cannot follow an impeachment of the house of commons: stat. Will. III. 1700.

It resisted various attempts to capture it; and in 1806 was garrisoned by Russians. It was given up to the French in 1807; taken by the English, 22 March, 1814; surrendered to the Turks, 1817; and abandoned by above 3000 of its inhabitants, who retired to the Ionian Isles, May, 1819.

PARIS (formerly *Lutetia Parisiorum*), the capital of France, situated on the river Seine, which cuts it into two unequal parts, the strongest being towards the north, and in which are three isles, *la ville* (*the city*), the *île St. Louis*, and the *île Louviers.* In the time of Julius Cæsar, Lutetia comprised the *city* only. It was greatly improved by the emperor Julian, who made it his residence while he governed Gaul, 355 to 361. It became successively the capital of the kingdoms of Paris, Soissons, and Neustria, and eventually of all the kingdom. Many ecclesiastical councils were held at Paris, 360-1528. The representative of the house of Orleans is styled count of Paris. Population of Paris in 1856, 1,178,262; in 1872, estimated population, 1,851,792; in 1876, 1,988,806; in 1881, 2,269,023; in 1891, 2,424,705; 1896, 2,536,000; see *France.*

PARISHES. Their boundaries in England are said to have been fixed by Honorius, archbishop of Canterbury, 636, or by Alfred about 890. They were enlarged, and the number of parishes was consequently reduced in the 15th century, when there were 10,000. Parish registers were commenced in 1538. Acts were passed in 1844 and 1856 by which new parishes may be formed out of too extensive ones; acts amended in 1869. The appointment of parish constables was made unnecessary by an act passed Aug. 1872. See *Registers*, and *Benefices*. Number of ecclesiastical parishes or districts in 1893, 1,400. By the Local Government act, passed 5 March, 1894, *Parish and District Councils* were appointed for rural parishes of 300 inhabitants or upwards, with suitable arrangements, to consist of from 5 to 15 members (women eligible) annually elected, on 15 April; 1st election in 7,142 parishes, 4 Dec. *et seq.* 1894. Parish councils were established in Scotland by the Local Government act of 1894. Parish registers of several counties are now published by the Parish Register Society, 1897.

PARKESINE. A new substance, composed of gun-cotton, obtained from various vegetable bodies, and oil. It can be formed with the properties of ivory, tortoiseshell, wood, india-rubber, gutta-percha, &c. It is the invention of Mr. Alexander Parkes, of Birmingham, and was shown by him at the Exhibition in 1862. In Dec. 1865, at the Society of Arts, parkesine was proved to be an excellent electric insulator, and therefore likely to be suitable for telegraphic purposes.

PARK LANE MURDER, see *Trials*, 1872.

PARKS. The Romans attached parks to their villas. Fulvius Lupinus, Pompey, and Hortensius, among others, had large parks. In England, the first great park of which particular mention is made was that of Woodstock, formed by Henry I., 1125. Queen Caroline, consort of George II., inquired, it is said, of the first Mr. Pitt (afterwards earl of Chatham), how much it would cost to shut up the parks as private grounds. He replied, "Three crowns, your majesty." The design was never afterwards entertained. See *Finsbury*, *Southwark*, *Green*, *Hyde*, *James's*, *St.*, *Regent's*, *Victoria*, *Alexandra*, *Battersea*, *West Ham*, and *People's Parks*, *Clissold*, *Waterlow*, and *Yellowstone Park*, *U.S.*, and *London Parks Act*.

Mungo Park set sail on his first voyage to Africa, under the patronage of the African society, to trace the source of the river Niger, 22 May, 1795; and returned 22 Dec. 1797, after having fruitlessly encountered great danger. He again sailed from Portsmouth on his second voyage, 30 Jan. 1805, appointed to a new expedition by government. It is stated that his party fired on the natives when resisted, and that he was killed at Broussa on the Niger, Nov. 1805. His "Travels in Africa" were published in 1799.

PARLIAMENT (from the French *parlement*, discourse) derives its origin from the Saxon general assemblies, called *Wittenagemot*. The name was applied to the assemblies of the state under Louis VII. of France, about the middle of the 12th century, but it is said not to have appeared in our law till its mention in the statute of Westminster I., 3 Edw. I., 1272: and yet Coke declared in his *Institutes*, and spoke to the same effect, when speaker (1592), that

this name was used even in the time of Edward the Confessor, 1041. The first clear account we have of the representatives of the people forming a house of commons, was in the 43rd Hen. III. 1258, when it was settled by the statutes of Oxford, that twelve persons should be chosen to represent the commons in the three parliaments, which, by the sixth statute, were to be held yearly. *Burton's Annals.* The general representation by knights, citizens, and burgesses, took place 49 Hen. III. 1265. *Dugdale's Summons to Parliament, edit.* 1685; see *Commons* and *Lords.* The power and jurisdiction of parliament are so transcendent and absolute, that it cannot be confined, either for causes or persons, within any bounds. It hath sovereign and uncontrollable authority in making and repealing laws. It can regulate or new-model the succession to the crown (as was done in the reigns of Henry VIII. and William III.). It can alter and establish the religion of the country, as was done in the reigns of Henry VIII., Edward VI., Mary, and Elizabeth. *Sir Edward Coke.** The ninth edition of May's "Practical Treatise on Parliament" was published in 1883; tenth edition, with many changes, by sir Richard Palgrave, published Dec. 1893. Mr. G. Barnett Smith's elaborate "History of the English Parliament" was published Nov. 1892; see *Triennial* and *Septennial.* Return of the names of members of parliament from the earliest period to the present time, ordered by the house of commons, 4 May, 1876, and 9 March, 1877. Part I. (1213-1702), published 1879. See *Reform* and *Local Parliaments.*

It is singular that the French language should still be used.

* Termed the "Palace of Westminster." The first contract for the embankment of the river was taken in 1837, by Messrs. Lee; this embankment, faced with granite, is 886 feet in length, and projected into the river in a line with the inner side of the third pier of old Westminster-bridge. Sir Charles Barry (born 1795, died 1860) was the architect of the sumptuous pile of buildings raised since 1840. The whole stands on a bed of concrete twelve feet thick; to the east it has a front of about 1000 feet, and covers an area of nine statute acres. It contains 1100 apartments, 100 staircases, and two miles of passages or corridors. The great Victoria tower at the south-west extremity is 346 feet in height, and towers of less magnitude crown other portions of the building. PARLIAMENT OF IRELAND, it is said, began with conferences of the English settlers on the hill of Tara, in 1173. Writs for knights of the shire were issued in 1295. The Irish parliament met last on 2 Aug. 1800; the bill for the union having passed.

PARLIAMENT OF SCOTLAND consisted of barons, prelates, and abbots, and occasionally of burgesses. A great national council was held at Scone by John Balliol, 9 Feb. 1292; and by Robert Bruce at Cambuskenneth, in 1326. A house of commons was never formed in Scotland. The parliament of Scotland sanctioned the act of union on 16 Jan. 1707, and met for the last time on 22 April, same year.

The parliament hall, Edinburgh castle, erected by James I., in 1434, was thoroughly and judiciously restored by M. Hippolyte Blanc, at the expense of the late Mr. Nelson and family. The hall was re-opened, Feb. 1891. The undertaking was greatly promoted by the investigations of lords Napier and Ettrick, major Gore Booth, and Mr. R. Chambers.

PARLIAMENT OF PARIS was instituted by Philip Augustus II., 1190, and was made the chief court of justice in France by Philip IV.; at his suggestion it revoked a bull of pope Boniface VIII., 1302. It was suppressed by Louis XV., 1771; restored by Louis XVI., 1774; demanded a meeting of the states-general in 1787; and was suspended by the national assembly, 3 Nov. 1789; see *Commune*.

The report of the commissioners was laid before parliament, 13 Feb. 1890. The following is an abridgment of their conclusions:—I. That the respondent members of parliament collectively were not guilty of conspiring for the absolute independence of Ireland as a separate nation, but that some of them (Messrs. M. Harris, Dillon, W. O'Brien, W. Redmond, O'Connor, J. Condon, and J. J. O'Kelly), together with Mr. Davitt, established the Land League mainly for that purpose. II. That the respondents [44] did conspire to promote agrarian agitation, the non-payment of rents, and the expulsion of the landlords (styled the English garrison). III. That they acquitted Mr. Parnell and others of the charge of insincerity in their denunciations of the Phœnix Park murders, and affirmed the fac-simile letter to be a forgery. IV. They found that the respondents did disseminate the *Irish World* and other newspapers, intending to incite to sedition and other crimes. V. That the charges of incitement to crime, except by intimidation, and of payments for that purpose, were not proved. VI. They found that the respondents did not denounce the system of intimidation, though they knew its effects; and VII. That they defended persons charged with agrarian crime, and supported their families, but it was not proved that they subscribed for testimonials for, or were intimately associated with, notorious criminals, or aided their escape by payments. VIII. That they found that the respondents made payments to compensate persons injured in the commission of crime. IX. That the respondents did invite and obtain the assurance and co-operation of the Physical Force Party in America, including the Clan-na-Gael, and did not repudiate the action of that party.

[Certain allegations against Mr. Parnell were declared not proved.]

The report adopted with thanks, by the commons, after 7 days' debate, 3–11 March; by the lords (without a division), 21 March, 1890. Mr. Gladstone's amendment rejected by 339 to 268.

PARRICIDE. There was no law against it in Athens or Rome, such a crime not being supposed possible. About 172 B.C., L. Ostius having killed his father, the Romans scourged the parricide; sewed him up in a leathern sack made air-tight, with a live dog, a cock, a viper, and an ape, and thus cast him into the sea. Miss Blandy was executed at Oxford for the murder of her father, April, 1752; see *Trials*, March, 1890.

PARSEES or **GUEBRES**, the followers of Zaradusht, called by the Greeks Zoroaster, who is doubtfully said to have lived before sixth century B.C. (see *Magi*), dwelt in Persia till 638, when, at the battle of Kadseah, their army was decimated by the Arabs, and the monarchy annihilated at the battle of Náhávend in 641. Many submitted to the conquerors, but others fled to India, and their descendants still reside at Bombay (where they are termed Parsees). Sir Jamsetjee Jejeebhoy, the 3rd baronet, was elected president of the community there, July, 1877. Mr. Dadabhai Naoroji, a Par-

see merchant, was for several years professor of Gujerati at University college, London. He was nominated as M.P. for the Holborn district, but not elected, 1886; elected 6 July, 1892, for Central Finsbury; visits Bombay, Dec. 1893. PARTHIA (Asia). The Parthians were originally a tribe of Scythians, who, being exiled, as their name implies, from their own country, settled near Hyrcania. Arsaces laid the foundation of an empire which ultimately extended over a large part of Asia, 250 B.C.; the Parthians were never wholly subdued by the Romans. The last king, Artabanus V., was killed, A.D. 226; and his territories were annexed to the new kingdom of Persia founded by Artaxerxes, who had revolted against Parthia.

PARTICULARISTS. The name given to those Germans who desire the maintenance of the independence of the German states, and oppose their absorption into the empire. M. Gasser, one of them, failed in an attempt to form a ministry in Bavaria, Sept. 1872. Particularism revived during the election in 1893.

PASSION-WEEK, the name given since the Reformation to the week preceding Easter, was formerly applied to the fortnight. Archbishop Laud says the two weeks were so called "for a thousand years together," and refers to an epistle, by Ignatius, in the 1st century, in which the practice is said to have been "observed by all." The week preceding Easter is now by some termed "Holy Week," the previous week "Passion Week."

PATENTS (from *pateo*, I lie open), licences and authorities granted by the king. Patents are said to have been granted for titles of nobility in 1344, by Edward III. They were first granted for the exclusive privilege of printing books, in 1591. The property and right of inventors in arts and manufactures were secured by letters patent by an act passed in 1623. The later laws regulating patents are very numerous; among them are 5 & 6 Will. IV. c. 83 (1835), and 15 & 16 Vict. c. 83 (1852). By the latter COMMISSIONERS OF PATENTS were appointed, viz., the lord chancellor, the master of the rolls, the attorney-general for England and Ireland, the lord advocate, and the solicitors-general for England, Scotland, and Ireland. In 1853, a journal was published under their authority, and indexes of patents, from March, 1617, to the present time. Specifications of patents may be consulted by the public at the Free Library and Reading-Room, in Southampton buildings, opened 5 March, 1854. PATRONAGE OF LIVINGS by Laymen in England is very ancient; in *Scotland* was opposed by the books of discipline 1560 and 1578, abolished 1649, restored 1660. The system led to the disruption of the established church, and the foundation of the free church, 18 May, 1843. The abolition of lay patronage was earnestly advocated by the authorities of the established church in March, 1870, and the duke of Argyll volunteered to resign his patronage in May. Of 1109 livings 319 belonged to the crown, and about 600 to private persons. An act (37 & 38 Vict. c. 82) for abolishing patronage in Scotland, brought in by the duke of Richmond, 18 May, passed, 7 Aug. 1874. PAULIANISTS or PAULINIANS, followers of Paul bishop of Samosata, afterwards patriarch of Antioch, 260, who are said to have denied Christ's divinity and the trinity; he was excommunicated 269 by a council at Antioch.

PAULICIANS, a sect of Christian reformers, arose about 652. Although they were severely persecuted, they spread over Asia Minor, in the 9th century, and finally settled at Montford, in Italy, where they were attacked by the bishop of Milan in 1028. Severe decrees against them were made in 1163, and they gradually dispersed; very probably sowing the seeds of the great reformation of the 16th century.

PAUL JONES, a Scotchman, born 1742; died at Paris, 1792. He commanded an American privateer during the American war, and made daring depredations on British commerce. He pillaged the house of lord Selkirk, near Kirkcudbright, and at Whitehaven burnt shipping in the harbour, April 1778. The Dutch permitted Paul Jones to enter their ports with two British ships of war which he had taken, and which the stadtholder peremptorily refused to deliver up, 1779.

PAUL'S CROSS, ST. (London), which stood at the north side of the cathedral, was a pulpit formed of wood, mounted upon steps of stone, and covered with lead, from which the most eminent divines were appointed to preach every Sunday in the forenoon. To this place the court, the mayor, the aldermen, and principal citizens used to resort. It was in use as early as 1259, and was appropriated not only to preaching, but to political and ecclesiastical discourses, &c. The cross was demolished in 1643, by order of the parliament.

PAUL'S SCHOOL, ST., was endowed in 1512 by John Colet, dean of St. Paul's, for 153 boys "of every nation, country, and class," in memory of the number of fishes taken by Peter. (*John* xxi. 11). The first schoolhouse was burnt in 1666; the second, by Wren, was taken down in 1824, and another building erected by George Smith. William Lilly was the first master, and his grammar is still used by the school. *Timbs.* The claim of the Mercers' company to be owners instead of trustees of Colet's estate was set aside by the vice chancellor, 11 Feb. 1870. The school ordered to be removed to West Kensington; site bought, June, 1878. New building designed by Mr. Waterhouse opened by lord Selborne, 23 April, 1884. The number of scholars has been increased. New schemes for the management of the school were issued by the charity commissioners, 1876, 1879 and 1893; after much discussion and opposition a scheme was sent to the committee of council of education for approval, May, 1894; finally modified, July, 1894.

PAUPERS, see *Poor*.

PAVAN, Pavane, or Pavin, was a slow dance of the 16th and 17th centuries, sometimes accompanied by singing.

PAVEMENT. The Carthaginians are said to have been the first who paved their towns with stones. The Romans, in the time of Augustus, had pavement in many of their streets; the Appian way, a paved road, was constructed 312 B.C. In England there were few paved streets before Henry VII.'s reign. London was first paved about 1533. It was paved with flagstones between 1815 and 1825. Wood and asphalte paving were tried in 1839, and have been disused since 1847; see *Wood Pavement*. Asphalte has been much used since 1869. Wood reported to be the best for London, May, 1876.

PAVIA (N. Italy), the ancient *Ticinum* or *Papia*. Its university, founded by Charlemagne, is said to be the oldest in Europe. Pavia was built by the Gauls, who were driven out by the Romans, and these in their turn were expelled by the Goths: in 568 it was taken by the Lombards, and became the capital of their kingdom. In the 12th century it was erected into a republic, but soon after was subjected to Milan and followed its fortunes. On 24 Feb. 1525, a battle was fought near here between the French and the Imperialists, when the former were defeated, and their king, Francis I., after fighting with heroic valour, and killing seven men

with his own hand, was at last obliged to surrender himself a prisoner. It was long asserted that Francis wrote to his mother, Louisa of Savoy, regent of the kingdom during his absence, saying, *Tout est perdu, madame, fors l'honneur* (All is lost, madam, except honour). The words are now said to have been, *L'honneur et la vie qui est saulvé.*

PAWNBROKING. The Roman emperors lent money upon land. The origin of borrowing money by means of pledges deposited with lenders is referred to Perugia, in Italy, about 1462. The institutions were termed *monti di pietà* (*which see*). Soon afterwards, it is said that the bishop of Winchester established a system of lending on pledges, but without interest. The business of pawnbrokers was regulated in 1756, and licences issued in 1783. The rate of interest on pledges was fixed in 1800. In London there were, in 1851, 334 pawnbrokers; and in England, exclusively of London, 1127; the number is increasing more than in proportion to the population. In 1860 an act was passed enabling pawnbrokers to charge a halfpenny for every ticket describing things pledged for a sum under 5*s*. The acts relating to pawnbrokers were amended in 1856, 1859, 1860. Pawnbrokers in Great Britain: 1851, 1873; in 1861, 2578; in 1871, 3540. The law was consolidated in the pawnbrokers' act passed 10 Aug. 1872.

PAX, a small tablet, generally silver, termed, *tabula pacis* or *osculatorium*, kissed by the Roman Catholic priests and laity; substituted for the primeval kiss of peace in the early church. The Pax is said to have been introduced about the 12th century.

PAYMASTER-GENERAL. In 1836 the army and navy pay departments were consolidated into the paymaster-general's-office, sometimes held by a cabinet minister.

A Peace Society, founded 1816, for the promotion of universal peace; holds annual meetings; proposed amalgamation with the International Arbitration and Peace Association (founded by Mr. Lewis Appleton in 1880), Dec. 1884. The association divided in May, 1886, when the British arbitration association was founded by Mr. Appleton. PEARLS, mentioned *Job* xxviii. 18. M. Réaumur, in 1717, alleged that pearls are formed like other stones in animals. An ancient pearl was valued by Pliny at 80,000*l.* sterling. One which was brought in 1574, to Philip II., of the size of a pigeon's egg, was valued at 14,400 ducats. A pearl named the *Incomparable*, spoken of by De Boote, weighed thirty carats, equal to five pennyweights,

and was about the size of a muscadine pear. The pearl mentioned by Tavernier, as being in possession of the emperor of Persia, was purchased of an Arab in 1633, and is valued at a sum equal to 110,400*l.* Value of pearls imported into Great Britain, 1856, 56,162*l.* Artificial mother of pearl is said to have been made at Berne by Mr. K. "PECULIAR PEOPLE," a small sect founded in London by Wm. Bridges and Jas. Banyard in 1838; chief seat Essex. Two members, Thomas and Maryanne Wagstaffe, were tried and acquitted of manslaughter, 29 Jan. 1868. They had neglected getting medical assistance for their sick child, and depended on the efficacy of their elders' prayers and anointing it with oil (*James* v. 14). Many cases of healing by these means are asserted. On 8 May, 1872, a father was convicted for neglecting to get medical advice for his child who died of small pox; and the sect agreed to modify their practice. Establishments for healing diseases by prayer exist in Germany.

At another trial, Thomas Hines was acquitted, in accordance with the opinion of the court; Baron Pigott held that the case did not amount to criminal neglect because the prisoner had not called in a doctor to his sick child, 19 Aug. 1874; similar cases since; 1875-6.
John Robert Downes (for neglect respecting scarlet fever) sentenced to 3 months' imprisonment 21 Sept. 1876.

PEDESTRIANISM. Euchidas, a citizen of Platæa, is said to have gone from thence to Delphi to bring the sacred fire. This he obtained, and returned with it the same day before sunset, having travelled 125 English miles. No sooner had he saluted his fellow citizens, and delivered the fire, than he fell dead at their feet. After the battle of Marathon, a soldier was sent from the field to announce the victory at Athens. Exhausted with fatigue, and bleeding from his wounds, he cried out, "Rejoice, we are conquerors!" and immediately expired.

* Sir Robert Peel was born 5 Feb. 1788; entered parliament in 1809; became under-secretary of the colonies in 1811, chief secretary for Ireland in 1812; M.P. for Oxford in 1818 (when he resigned his office); secretary for home department in 1822; resigned office and reappointed in 1827; resigned again in 1830; became premier in 1834 and 1841 (*see above*). He was thrown from his horse 29 June, and died 2 July, 1850. He greatly relaxed the severity of our criminal code in 1827, *et seq.*; established the new police, and carried the catholic emancipation bill in 1829, and the repeal of the corn laws in 1846. was broken up on the retirement of lord Althorp, the chancellor of the exchequer, in Nov. 1834. Sir R. Peel, then in Italy, was summoned home, the duke of Wellington holding the seals of office in the interim. They both resigned in April, 1835. In May, 1841, sir R. Peel carried a vote of want of confidence in the Melbourne cabinet, but did not take office; and in Sept. of that year, he became again premier. He lost the support of the conservative party by obtaining the repeal of the corn laws, and resigned 29 June, 1846.

It was again occupied by the Burmese and strongly fortified, with a garrison of 4000 men. It was recaptured by general Godwin with 1200 men and two guns, in two hours, with the loss of six killed and thirty-two wounded. In 1369, Hung-wu, of the Ming dynasty, removed to Nankin, which was the capital till Yung-lo removed his court to Pekin in 1410; and by him and his successors the city was enlarged, fortified, and beautified. It was visited by lord Macartney, Sept. 1793; surrendered to the allied English and French armies, 12 Oct. 1860; and evacuated by them 5 Nov., after peace had been signed 24 Oct. Preliminary Peace with France concluded here, 5 April, 1885. The famous temple or Altar of Heaven burnt 18 Sept. 1889. Population, estimated 1877, 1,650,000.

PELAGIANS, followers of Pelagius, a Briton, appeared at Rome about 400. Their doctrines were condemned by councils at Jerusalem, Carthage, and other places, 415, 530. They maintained:—

1. That Adam was by nature mortal, and whether he had sinned or not would certainly have died. 2. That the consequences of Adam's sin were confined to his own person. 3. That new-born infants are in the same condition with Adam before the fall. 4. That the law qualified men for the kingdom of heaven, and was founded upon equal promises with the Gospel. 5. That the general resurrection of the dead does not follow in virtue of Christ's resurrection.

PELASGI, the primitive inhabitants of Asia Minor, Greece, and Italy, appear to have belonged to the Indo-Germanic race. They were in Greece about 1900 B.C., and in Italy about 1600 B.C. They have been termed Tyrrheni, Sicani or Siculi, Apuli, &c. From the Pelasgi came the Dorians, Æolians, and Ionians; all three being Hellenes or Greeks. The Pelasgi appear not to have had the art of writing, but have left numerous architectural remains; they were probably a wealthy, powerful and intelligent people.

PENDULUMS. The isochronous property of the pendulum is said to have been applied to clocks by Galileo about 1639, and by Richard Harris about 1641. Christian Huyghens claimed this discovery, 1658. See *Clocks*. George Graham invented the compensating pendulum, 1715. Experiments were made to determine the density of the earth by pendulums by Mr. (aft. sir) G. B. Airy (aftds. astronomer royal), and others, in a mine in Cornwall, in 1826 and 1828; and at Horton Colliery 1854. In 1851, M. PENNSYLVANIA (N. America), the first state in the Union in regard to mineral wealth. The settlement by the Swedes here in 1643, was taken by the Dutch in 1655, and acquired by the British in 1664. Pennsylvania was granted by Charles II. to the duke of York, 1664; and it was sold to the Penn family, 1681. Pennsylvania was afterwards purchased from the Indians by the celebrated William Penn (son of admiral Penn), who went out from England with a number of colonists; from which period the settlement gradually increased. Mr. Penn granted a charter in May, 1701, but the emigrants from the Low Countries refused it, and separated themselves from the province of Pennsylvania. They afterwards had their own assembly, in which the governor of Pennsylvania presided. This state adopted an independent constitution in 1787, and established the present in 1790. Great destruction of property and life by a tornado, especially at Pittsburg and Reading, 9 Jan. 1889.
Several days' violent storms and heavy rain in the Alleghanies, swelled the rivers and caused the overflow of the lakes, May, 1889. At 5 p.m. 31 May, the South Fork reservoir, a lake about 4 miles square, burst the huge dam, and a mass of water rushed down the South Fork, four miles, by the deep circuitous Conemaugh valley to its junction with the Conemaugh river, driving all before it. For a distance of about 12 miles round Johnstown the flood swept out towns

and villages, destroying all the bridges, railways, and factories. South Fork, Johnstown, Cambria city, Morrelville, Sheridan, and other flourishing towns were completely blotted out. A great mass of floating wreckage, which was stopped by a stone railway bridge at Johnstown, took fire, above five hundred persons, who were hurled on the burning mass, perished.

The most energetic measures were taken by the government, by several states and by the railway companies for the relief of the sufferers, and for averting imminent famine and pestilence. Robbers of the dead and living were lynched by a vigilance committee. Troops were sent to maintain order, liberal subscriptions were begun in London, Paris, and other places, June.

It is stated that the dam had previously given visible signs of its being in a very insecure condition, and had not been properly constructed. Several towns and villages submerged, June; many bridges swept away; above 150 deaths reported.

Explosions followed, causing a panic, and the people fled to the hills, women and children being trampled on during the rush. The fiery river reached Oil city, 18 miles distant, and a large part of it was reduced to ashes or submerged. It was reported that 150 persons were either drowned or burnt at Titusville, and about 200 missing. PENNY. The ancient silver penny was the first silver coin struck in England, and the only one current among the Anglo-Saxons. The penny until the reign of Edward I. was struck with a cross, so deeply indented that it might be easily parted into two for halfpence, and into four for farthings, and hence these names. PERIPLUS. The voyage of Hanno, the Carthaginian navigator, about the third century B.C. His account of his travels, written in the Punic language, was translated into Greek; an English translation, edited by Falconer, in London, 1797.

PERJURY. The early Romans threw the offender headlong from the Tarpeian precipice; and the Greeks set a mark of infamy upon him. After the empire became Christian, any one who swore falsely upon the Gospels, was to have his tongue cut out. The canons of the primitive church enjoined eleven years' penance; and in some states the false swearer became liable to the punishment he charged upon the innocent. In England perjury was punished with the pillory, fine, and imprisonment, 1562. By the Abolition of Oaths bill, persons making a false declaration are deemed guilty of a misdemeanor; Act 5 & 6 Will. IV. cc. 60 and 61, 9 Sept. 1835; a perjury bill was read a second time, 2 April, 1895. Perhaps the greatest perjurer in modern times was Titus Oates; see *Oates*. A woman named Alice Grey was convicted of many perjuries in 1856. See *Trials*, 1873.

PERUGIA, a city of central Italy; as Perousia, anciently one of the Etruscan confederation. It allied itself with the Samnites, but was ruined by two defeats by the Romans, 309 and 295 B.C. It was taken by Octavius Cæsar from the adherents of Antony; many of whom were immolated on altars by their victor, 41. Leo X. took Perugia from the rival families Oddi and Baglioni, in A.D. 1520. An insurrection here against the pope was put down by the Swiss with great cruelty, 20 June, 1859. Perugia was taken by the Sardinian general Fanti, in Sept. 1860, when the cruel papal general Schmidt and 1600 men were made prisoners.

PERUKE or WIG. The ancients used false hair, but the present peruke was first worn in France and Italy about 1620; and introduced into England about 1660, and prevailed more or less till about 1810.

It is said that bishop Blomfield (of London), in 1830, obtained permission for the bishops to discontinue wearing their wigs in parliament, of which they gradually availed themselves. On account of the heat, sir J. P. Wilde, and other judges and several counsel, appeared in court without wigs, 22, 23 July, 1868.

PESCHIERA, a strong Austrian fortress, on an island in the Mincio, near the Lago di Garda, N. Italy. It has been frequently taken by siege:—by the French, 1796; by the Austrians and Russians, 1799; by the French again, 1801; given up by them, 1814; taken by the Sardinians, May, 1848; retaken by Radetsky, March, 1849. The Sardinians were preparing to besiege it in July, 1859, when peace was made. It was given up to the Italians, 9 Oct. 1866; see *Quadrilateral.*

PESSIMISM (from *pessimus*, the worst), the opposite doctrine to *optimism* (which see). Mr. James Sully's "Pessimism, a History and a Criticism," was published in 1877. Arthur Schopenhauer (1788-1860), an eminent pessimist, says, "All life is effort, all effort is painful, the pains of life must predominate."

PESTALOZZIAN SYSTEM of education was devised by John Henry Pestalozzi, born at Zurich in Switzerland, in 1746, died 17 Feb. 1827. In 1775 he turned his farm into a school for educating poor children in reading, writing, and working; but he did not succeed. In 1798 he established an orphan school where he began with the mutual instruction, or monitorial system, since adopted by Lancaster; but his school was soon after turned into a hospital for the Austrian army. In 1802, in conjunction with Fellenberg, he established his school at Hofwyl, which at first was successful, but eventually declined through mismanagement.

PESTH (Hungary), built about 889, on the east bank of the Danube, opposite Buda, was repeatedly taken and besieged in the wars of Hungary, particularly with the Turks. The great insurrection broke out here, and the minister, count Lamberg, was killed, 28 Sept. 1848. Buda-Pesth was taken by the imperialists, 5 Jan. 1849. The Hungarians afterwards defeated the Austrians, who were obliged to evacuate it 18 April, same year; see *Hungary.* Buda-Pesth formally constituted capital of Hungary, Nov. 1873.

PETALISM (from the Greek *petalon*, a leaf), a mode of deciding upon the guilt of citizens of Syracuse, similar to the Athenian ostracism, the name being written on a leaf (generally of an olive) instead of on a shell, about 460 B.C. If guilt were established the sentence was usually banishment.

PETARD, or PETAR, an invention ascribed to the Huguenots in 1579. Petards of metal, nearly in the shape of a hat, were employed to blow up gates or other barriers, and also in countermines to break through into the enemy's galleries. Cahors was taken by Henry IV. by means of petards, in 1580, when it is said they were first used. "Hoist with his own petar." *Shakspeare*, Hamlet iii. 4.

Paul III. committed the work to Michael Angelo, who devised the dome, in the construction of which 30,000 lbs. of iron were used. The church was consecrated 18 Nov. 1626. The front is 400 feet broad, rising to a height of 180 feet, and the majestic dome ascends from the centre of the church to a height of 324 feet; the length of the interior is 600 feet, forming one of the most spacious halls ever constructed. PETROLEUM, rock oil or mineral oil similar to paraffin, has been found in many parts of the world, especially at Rangoon. In 1859 and since, a number of oil-springs were discovered in the bituminous coal regions of N. W. Pennsylvania, now termed "Petrolia," and others have been discovered in Ohio and other states, and also in Canada. Numerous artesian wells were sunk, manufactories erected, and an almost unlimited supply obtained; between 1859-77, 2,802,500,000 gallons; in 1863, 8,907,365 gallons. In consequence of the importation of this oil into this country, and many accidents having taken place through its inflammability at low temperature, acts for "the safe keeping of petroleum" were passed, 29 July, 1862; July, 1868, Aug. 1871, and 1879. Petroleum became an awful weapon in the hands of the insurgents in Paris, 23-27 May, 1871. About fifty killed by explosion at a petroleum manufactory near Rheims, 16 July, 1871. The Petroleum Association test petroleum, with the view of preventing the importation of that which is dangerous. They destroyed the batteries, but failed in taking some Russian frigates, except the *Sitka*, a store-ship taken by the *President*, and a schooner taken by the *Pique*. Admiral Price was killed, it is supposed by the accidental discharge of his own pistol. A party of 700 sailors and marines landed to assault the place, but fell into an ambuscade; many were killed, including captain Parker and M. Bourasset, English and French officers. The objects of the attack were not attained, it is thought from want of stores. After this the Russians greatly strengthened their defences, but on 30 May, 1855, the allied squadron in the Pacific arriving here found the place deserted. The fortifications were destroyed, but the town was spared. The Russian ships escaped.

PHILISTINES, a people of Palestine, conquered Israel, 1156 B.C., and ruled it forty years. They were defeated by Samuel, 1120; and by Saul and Jonathan, 1087. They again invaded Israel about 1063, when David slew their champion, Goliath. After David became king he thoroughly subdued them, 1040. In common with Syria their country was subjugated by the Romans, under Pompey, about 63.—In Germany, about 1830, Heine and the liberal party applied the term "Philistines" to the opponents of progress, or conservative party.

In England the term has been applied to the opponents of "culture" and refinement, chiefly among the upper middle classes by Mr. Matthew Arnold and others . . . . . 1867 *et seq.*

PHILOSOPHER'S STONE, see *Alchemy*.

PHILOSOPHICAL LAMP, constructed by Johann Wolfgang Döbereiner, who applied in it the property possessed by spongy platinum of causing the combination of oxygen and hydrogen, discovered by him in 1823.

PHILOSOPHY (love of wisdom), the knowledge of the reason of things (distinguished from history, the knowledge of facts, and from mathematics, the knowledge of the quantity of things)—the hypothesis or system upon which natural effects are explained. *Locke*. Pythagoras first adopted the name of philosopher (such men having been previously called sages) about 528 B.C. Philosophers were expelled from Rome, and their schools suppressed, by Domitian, A.D. 83. Philosophy is now divided into:—1. Moral or Ethical; 2. Intellectual; 3. Natural or Physical.

MORAL AND INTELLECTUAL PHILOSOPHY.

ANCIENT SCHOOLS.—The *Vedas* (*which see*) contain what is now considered to be the most ancient moral philosophy; the source of later systems, about the sixth or seventh century, B.C. MODERN SYSTEMS.—*Nominal*, Jean Roscellin, about 1092; Abelard, &c.; *Rational*, Bacon, about 1624; *Cartesian*, Descartes, about 1560: *Reflective* or *Perceptive*, Locke, 1690; *Idealistic*, Berkeley, 1710; *Elective*, Leibnitz, 1710; *Common Sense*, Reid, 1750-70; *Transcendental*, Kant, Hamilton, &c., 1770-1860; *Scientific*, Fichte, 1800-14; *Absolute Identity*, Schelling, 1800-20; *Absolute Idealism*, Hegel, 1810-30; *Utilitarian*, Bentham, Mill, &c. 1790-1873; *Positive*, Comte, 1830; *Realism* and *Evolutionary Materialism*, prevalent, Darwin, Herbert Spencer's, &c. 1873. PHIPPS' EXPEDITION. The hon. captain Phipps (afterwards lord Mulgrave) sailed from England in command of the *Sea-Horse* and *Carcase* ships, to make discoveries, as near as possible to the North Pole. In August 1773, he was for nine days environed with barriers of ice, in the Frozen Ocean, north of Spitzbergen, 80° 48′ N. lat. A brisk wind in two or three days accomplished their deliverance. They returned to England without having made any discoveries, 20 Sept. 1773. Nelson was coxswain to the second in command.

PHLOGISTON, a term employed by Stahl to designate the hypothetical matter or principle of fire; "the inflammable principle" of bishop Watson, near the close of the 17th century. The chemical theory based upon it was refuted by Lavoisier, 1790, who substituted for it the theory of oxygenation.

PHOCIS, a state in Northern Greece. The Phocians seized Delphi 357 B.C., and commenced the second Sacred War. They were opposed by Thebes and other states, and were utterly subdued by Philip II. of Macedon in 346. By the excavations of the British school of archæology at Abæ the remains of two ancient temples of Apollo, with relics of bronzes, inscriptions, &c., and at Hyampolis, a shrine of Artemis (Diana), &c., were discovered, reported, 30 Aug. 1894.

PHŒNICIA, on the sea coast of Syria. The natives were the most eminent navigators and traders of antiquity; their cities or allied states being Tyre, Sidon, Berytus, Tripoli, Byblos, and Ptolemais, or Acre. From the 19th to the 13th centuries before Christ, they established colonies on the shores or isles of the Mediterranean—Carthage, Hippo, Utica, Gades, and Panormus, and they are said to have visited the British Isles. Phœnicia was conquered by Cyrus, 537 B.C.; by Alexander, 332; by the Romans, 47; and after partaking of the fortunes of Palestine, was added to the Ottoman empire, A.D. 1516. See *Sidon* and *Tyre*.

PHŒNIX CLUBS, of a treasonable character, were formed in Ireland in 1858. They met at night to drill. Several persons were arrested and tried in March, 1859, at Tralee; but the jury could not agree on their verdict. Daniel Sullivan was condemned to penal servitude for ten years, April, 1859. Eventually some of the prisoners pleaded guilty, and were discharged on being bound over to keep the peace.

PHONOGRAPH, a machine proposed to be attached to pianofortes and other keyed instruments, by which any music that is played may be written down on blank paper, since it rules and prints the notes simultaneously. It was patented by Mr. Fenby, 13 June, 1863. The motive-power is electro-magnetism. Machines with a similar object were projected by Mr. Creed in 1747; Mr. J. F. Unger in 1774; and by Mr. Carreyre in 1827.

A new phonograph by Thomas Alva Edison, electrician of New Jersey, was announced . Dec. 1877

When these are placed upon the diaphragm of a telephone connected with revolving apparatus, the sounds may be reproduced with a weirdlike effect. Improved by Mr. Shelford Bidwell, 1879. See *Telephone*.

PHONOGRAPHY (from the Greek *phōnē*, sound), suggested by Franklin, 1768. The Phonetic society, whose object was to render our mode of writing and printing more consonant to sound, was established, 1 March, 1843; sir W. C. Trevelyan, president, and Mr. Isaac Pitman, secretary, the latter being the inventor of the system which was made known in 1837; knighted, May, 1894; died, aged 84, 22 Jan. 1897. Among other works published by the promoters of the system, was the "Phonetic News," in 1849. Phonography has been adopted for European and oriental languages, 1887, *et seq.* "Phonographic Quarterly Review," published, Nov. 1894; see *Visible Speech*.

Mr. Edmunds' phonoscope, exhibited to the British Association, Aug. 1878, is an instrument for producing figures and light from the vibrations of sound.
The name phonoscope is given to apparatus used by M. M. G. Dumeny in photographing the lips of a speaker and so combining the images thus produced that they may be understood by a deaf-mute, June, 1892. See *Photography*, 1891.

PHOSPHOR-BRONZE, an alloy of copper, tin, and phosphorus, invented by Messrs. Montefiore-Levi and Künzel, of Belgium, in 1867. It is very hard, ductile, and elastic, with a colour resembling gold.

PHOSPHORESCENCE. The property possessed by some bodies of retaining luminosity after exposure to light observed by the ancients; especially noticed by Vincenzo Cascariolo (1602), Boyle, Canton, Wilson, and others; and specially studied by Edmond Becquerel, and Balmain. See *Luminous Paint*, *Air* (footnote).

PHOSPHORUS was discovered in 1667, by Brandt, of Hamburg, who procured it from urine. The discovery was prosecuted by John Kunckel, a Saxon chemist, about 1670, and by the hon. R. Boyle about the same time. *Nouv. Dict.* Phosphoric acid is first mentioned in 1743, but is said to have been known earlier. Gahn pointed out its existence in bones in 1769, and Scheele devised a process for extracting it. Canton's phosphorus is so called from its discoverer, 1768. Phosphoretted hydrogen was discovered by Gengembre in 1812. The consumption of phosphorus has immensely increased since the manufacture of lucifer matches. In 1845, Schrötter, of Vienna, discovered allotropic or amorphous phosphorus, which ignites more slowly and is less unwholesome in working than ordinary phosphorus.

PHOTOGRAPHY. The action of light on chloride of silver was known as early as the 16th century. The phenomenon was studied by Scheele (1777), Senebier (1790), Ritter and Wollaston (1801). From the results of these investigations, experiments were made by Thos. Wedgwood and Humphry Davy, in the Royal Institution, London, which were published in its Journal, 1802. Wedgwood may be regarded as the first *photographer*. His paper was entitled "an account of a method of copying paintings upon glass, and of making profiles by the agency of light upon nitrate of silver."

Further discoveries were made by Niepce in 1814, and sir J. Herschel in 1819.
Louis J. M.-Daguerre commenced his experiments in 1824; and in 1826 joined Joseph Nicéphore Niépce, and worked with him till the death of the latter in 1833. The production of *Daguerreotype* plates was announced in Jan. 1839; and the French chamber of deputies granted a pension to Daguerre and to Niepce's son Isidore.
In 1839 Mr. Henry Fox Talbot first published his mode of multiplying photographic impressions by producing a *negative* photograph (*i. e.*, with the light and shades reversed) from which any number of positive copies may be obtained. His patent for producing the *Talbotype* or *Calotype* (on paper) is dated Feb. 1841.

PHOTOHELIOGRAPH, an apparatus for registering the position of the sun's spots by means of clockwork and photography; erected at the suggestion of sir John Herschel at Kew observatory about 1857. It was used by Mr. Warren de la Rue to photograph the disc of the sun during the eclipse of 18 July, 1860.

PHOTOGALVANOGRAPHY, the art of producing engravings by the action of light and electricity The earliest specimens were produced by Nicéphore Niépce, and presented by him in 1827 to the great botanist, Robert Brown. Great advances have since been made in this art by MM. Niépce de St. Victor (who published a treatise on it in 1856), Vitry, W. R. Grove, H. Fox Talbot, &c. In 1852, Paul Pretsch patented a process which he called "Photogalvanography."

PHOTOGLYPHIC ENGRAVING (a process by which the light actually etches a picture on a plate that may be and has been printed from) was patented by Mr. Fox Talbot in 1858, and is described and exemplified in the Photographic News, 9 and 16 Sept. 1859, a specimen being given in the latter number.

PHOTOZINCOGRAPHY (a process by which photographs are transferred to zinc plates which may be printed from) was devised by sir Henry James, chief of the Ordnance Survey, and made known in 1860. By it maps, charts, and engravings may be printed at a small cost.

PHOTO-SCULPTURE: M. Villème's employment of photographs in the formation of sculpture was announced in 1863.

Messrs. Goupil's process of *Photogravure*, rivalling mezzo-tint, reported highly successful; fine pictures reproduced, Feb. 1884.

PHOTOMETER (light measurer); one was constructed by Dr. W. Ritchie in 1825. Many improvements have been made recently in photometry. See under *Stars.*

Mr. A. Vernon Harcourt's new holophotometer highly approved June, 1888.

Stellar Photometry, the measurement of the light of the stars, has been much studied by astronomers, especially by sir John Herschel, prof. Argelander, prof. C. Pritchard and others. Mr. W. J. Dibdin, in his "Guide to the measurement of light," published in 1889, describes his application of terrestrial photometry to stellar light.

PHOTOPHONE. In this apparatus, constructed by professor Graham Bell and Mr. Sumner Tainter of Washington, in 1880, a thin plane mirror is thrown into vibration by the voice; a beam of light is reflected from this mirror and received at a distance by a cell of the metal selenium; when, by arrangement, this is connected with a telephone, the sounds are reproduced.

PHOTOSPHERE, see *Sun*, note.

PHOTOTACHOMETER, an instrument for measuring the velocity of light, invented by Professor Simon Newcomb of Washington, 1879-80.

PHRENOLOGY, see *Craniology.*

PHRYGIA (now Karamania), a province in Asia Minor, became part of the Persian empire in 537 B.C., and partook of its changes. After their defeat of Antiochus the Great, king of Syria, 190 B.C., the Romans added Phrygia to the kingdom of Pergamus, which was bequeathed to them by Attalus III., the last king, 133 B.C.

PHYLLOXERA, see *Vine.*

PHYSIC appears to have been first practised by the Egyptian priests. Pythagoras endeavoured to explain the philosophy of disease and the action of medicine, about 529 B.C. Hippocrates, the father of medicine, flourished about 422 B.C., and Galen, born A.D. 131, was the oracle of medical science. About 980 Avicenna, an Arab, wrote a system of medicine. Dr. R. Quain's *Dictionary of Medicine*, published 1882. "The System of Medicine," consisting of contributions by eminent physicians and surgeons, edited by sir J. Russell Reynolds, in 5 vols., published 1866-75. A "System of medicine," by many writers, edited by Dr. Clifford Allbutt, vol. I., June 1896; vol. III., 1898. See *Medical.*

The dogmatic age of medicine lasted till the Reformation, when it was attacked by Paracelsus (1493-1541), and Vesalius (1514-64). Since 1800 medical practice has been completely transformed by physiological and chemical research.

The discovery of the circulation of the blood, by Dr. Harvey, furnished an entirely new system of physiological and pathological speculation, 1628. See *Medical* and *Societies.*

PHYSICIAN TO THE KING.—John, the king's chaplain and physician (afterwards bishop of Bath and Wells), mentioned 1090.

The earliest mandate or warrant for the attendance of a physician at court is dated 1454, and 33 Henry VI., a reign fertile in the patronage which was afforded to practitioners in medicine; but no appointment existed which can justly be called physician to the royal person. By this warrant the king, with the consent of his privy council, deputed to three physicians and two surgeons the regulation of his diet, and the administration of such medicines and remedies as might be sufficient for his cure, without any allusion to the previous existence or permanency of the office which they were authorised for a time to fill, or to a remuneration for their services.—*Life of Linacre.*

Miss Garrett (afterwards Mrs. Anderson) licensed at Apothecaries' hall, London, to practise medicine, 28 Sept. 1865.

At a meeting of the Royal Medical and Chirurgical Society, 3 May, 1869, it was resolved that the "Royal Society of Medicine" (including the various sections) be founded; the resolution was affirmed, 22 Feb. 1870; but in 1871 the project dropped.

School of Medicine for Women in London (council: Professors Burdon-Sanderson and Huxley, Mrs. Garrett-Anderson, M.D., Mrs. Blackwell, M.D., and others); opened, Oct. 1874.

Registration of medical women, permitted by Medical act, 39 & 40 Vict. c. 41, 11 Aug. 1876.

The queen lays the foundation of the Medical Examination hall on the Victoria Embankment, 24 March, 1886.

The curriculum for medical students changed from 4 to 5 years; begins Oct. 1893.

PHYSIC GARDENS. The first cultivated in England was by John Gerard, surgeon of London, in 1567; that at Oxford was endowed by the earl of Danby, in 1652; that at Cambridge was commenced about the middle of the last century; and that at Chelsea, originated by sir Hans Sloane, was given to the Apothecaries' company in 1721; this last was very much admired by Linnæus.

PHYSICIANS, ROYAL COLLEGE OF, of London (of England since 1858), was projected by Dr. Linacre, physician to Henry VIII., who, through his interest with cardinal Wolsey, obtained letters patent, constituting a corporate body of regular physicians in London, with peculiar privileges, 23 Sept. 1518. Linacre was elected the first president of the college. Dr. W. Harvey was a great benefactor to this institution, 1653. He built a library and public hall, which he granted for ever to the college, with his books and instruments. The college was afterwards held in a building in Warwick-lane, erected by sir C. Wren, where it continued till 1825, when the present elegant stone edifice in Trafalgar-square was erected from designs by sir R. Smirke. The college is composed of fellows and members, formerly called licenciates and extra-licenciates. The queen's bench division decided that the college was entitled by the medical act of 1886 to grant diplomas both of medicine and surgery, 8 March, 1893. The prince of Wales elected a fellow of the college, July, 1897.—The College of Physicians, Dublin, was founded by charter of Charles II. 1667, and was re-incorporated in 1692. PHYSICS, see under *Philosophy, Natural.*

PHYSIOGNOMY, a science which affirms that the dispositions of mankind may be discovered from the features of the face. The origin of the term is referred to Aristotle; and Cicero was attached to the science. It became a fashionable study from the beginning of the 16th century; and in the 18th century, the essays of Le Cat and Pernethy led to the modern system.

J. K. Lavater, who endeavoured to raise physiognomy to the rank of a science, published his celebrated work "Physiognomische Fragmente," 1775–78, of which an English translation by Holcroft was published in 1793. The subject was considered by C. R. Darwin in his work "Expression of the emotions in Man and Animals," 1873, and by Mantegazza in his "Physiognomy and Expression," 1890.

PHYSIOLOGY is that part of physics which treats of the inner constitution of animals and plants, and the several functions and operations of all their organs and tissues. The works of Müller, Milne-Edwards, Huxley, Carpenter, Virchow, Brown-Séquard, Helmholtz, Ludwig, Du Bois-Reymond and sir John Bucknill, are much celebrated, and Todd's "Cyclopædia of Physiology" (1836-59) is a library in itself. PIANETTE, a small upright piano introduced by Bord of Paris in 1857.

PIANOFORTE.* The invention is attributed to Cristofalli (or Cristofori), an Italian, J. C. Schröter, a German, and Marius, a Frenchman, early in the 18th century. The strings are struck by small hammers, and not by quills, as in harpsichords. Schröter is said to have presented a model of his invention to the court of Saxony, in 1717; and G. Silberman manufactured pianofortes with considerable success in 1772. Pianofortes were made in London by M. Zumpie, a German, 1766, and have been since greatly improved by Clementi, Broadwood, Collard, Kirkman, Erard, Pleyel, and others.

Upright pianos, first made in this country, were suggested by Isaac Hawkins in 1800, and Thomas Lond, in 1802. Wm. Southwell patented "cabinet pianos" in 1807; superseded, from about 1840, by the cottage, piccolo, and other pianos.

A keyed instrument at Modena was named "piano e forte," 1598.

A "*stone pianoforte,*" formed of a series of flints and other stones of various sizes, collected in France and arranged by M. Baudre, was played on by him at the Royal Institution, on 16 March, 1866.

The new *transposing* piano, invented by Mr. Henry Schallehn, was exhibited at the Savoy hotel, Westminster, 10 June, 1890.

The Janko pianoforte, with a new arrangement of keyboard, exhibited in the Portman rooms, London, W., 24 Nov. *et seq.* 1891, said to possess many advantages.

A "double piano," a new harpsichord and harp, played on at Messrs. Pleyel's rooms, London, 12 April, 1897.

PICARDY (N. France), was conquered by the English in 1346, and by the duke of Burgundy in 1417, to whom it was ceded by the treaty of Arras, 21 Sept. 1435, and annexed to France by Louis XI., 1463.

PICCADILLY, a fine street, W. London; the name, of uncertain origin, was Pickadilla and Pigudello, about 1660, when a house of entertainment existed near the Haymarket, termed Pickadilly hall, after which buildings were gradually extended westwards.

PICCOLO PIANO, a small pianoforte introduced by Robert Wornum in 1829.

PICENTINES, a Sabine tribe, subdued by the Romans, and their capital, Asculum, taken, 268 B.C. They began the Social war in 90, and were conquered in 89 B.C.

* The nucleus of the instrument was a little box over which was stretched strings: such was the citole, the dulcimer, and the psaltery. The clavitherium had keys; the clavichord (about 1500) had dampers; successive improvements were the virginals (on which queen Elizabeth played), the spinet (about 1700), and the harpsichord (with two rows of keys), said to have been used in the 15th century, for which Bach and Handel composed in the 17th century. A collection of harpsichords (one dated 1555) is in the South Kensington museum. A double-pianoforte (with two keyboards reversed), giving remarkable effects (patented by M. M. Mengeot), played on at Covent-garden theatre, 21 Oct. 1878.

PIE-POUDRE COURT, the Court of Dusty Foot, whose jurisdiction was established for cases arising at fairs and markets, to do justice to the buyer and seller immediately upon the spot. By stat. 17 Edw. IV., it had cognizance of all disputes in the precincts of the market to which it might belong, 1477.

PIER AND HARBOUR ACT, to facilitate the formation, management, and maintenance of piers and harbours in Great Britain and Ireland, was passed in 1862.

PIETISTS, a Lutheran sect, instituted in Leipsic, by Philip James Spener, a professor of theology, about 1689, with the view of reforming the popular religion. He established "colleges of pietists," with preachers resembling those of the society of friends and the methodists in Britain, about 1760. A body resembling the Pietists, named Chasidim, arose among the Jews in the Ukraine, and spread through Poland and European Turkey.

PIEZOMETER (Greek *piezo*, I compress), an apparatus for measuring the compressibility of liquids, invented by Œrsted (died 1851); improved by Despretz & Saigey.

PIGEONS were employed as carriers by the ancients. Hirtius and Brutus corresponded by means of pigeons at the siege of Modena. The pigeons of Aleppo served as couriers at Alexandretta and Bagdad. Thirty-two pigeons liberated from London at 7 o'clock in the morning, 22 Nov. 1819; at noon one of them arrived at Antwerp; a quarter of an hour afterwards a second arrived; the remainder on the following day. *Phillips.* At a pigeon race, 25 July, 1872, from Spalding to London, the speed allowed was 90 seconds a mile; see *Post Office*, 1870.

In a pigeon race from Dover to Plymouth, some pigeons attained the velocity of 1,233 yards, 1,218 yards and 1,008 yards per minute 22 July, 1886. About 300 pigeon-flying societies exist in France: the organization of carrier-pigeon stations ordered by the minister for war, Jan. 1888. About 350 similar societies exist in Germany, stated Jan. 1888.

National Peristeronic Society (originating from the Columbarian Society, founded in 1750), has annual shows.

A bill for prohibiting shooting pigeons rising from a trap attended with cruelties, passed by the commons with large majorities, in 1883 and 1884 (195—40), was rejected by the lords in 1883 (30—17), and on 9 May, 1884 (78—48).

The London Columbarian society opened its 15th annual exhibition of pigeons, at the Westminster Aquarium, 2 Dec. 1891.

PILCHARD FISHERY. Peculiar to Land's End, Cornwall, reverts to W. Ireland, after suspension of two centuries (stated July, 1883).

PILGRIMAGE OF GRACE, a name assumed by religious insurgents in the north of England, who opposed the dissolution of the monasteries. The movement, which commenced in Lincolnshire in Sept. 1536, was suppressed in Oct.; but soon after revived in Yorkshire; and an expedition, bearing the foregoing name, having banners on which were depicted the five wounds of Christ, was headed by Aske, and other gentlemen, and joined by priests and 40,000 men of York, Durham, Lancaster, and other counties. They took Hull and York, with smaller towns. The duke of Norfolk marched against them, and by making terms dispersed them. Early in 1537 they again took arms but were promptly suppressed, and the leaders, several abbots, and many others, were executed.

PILGRIMAGES began with the pilgrimage of the empress Helena to Jerusalem, 326. They became very frequent at the close of the 10th century. Robert II. of France made several pilgrimages; among others one to Rome about the year 1016, perhaps in 1020, when he refused the imperial dignity and the kingdom of Italy. The pilgrimage to Canterbury is described by Chaucer in his Canterbury Tales about 1383. The pilgrimage of Mahometans to Mecca, the birth-place of the prophet, is commanded in the Koran. This pilgrimage was very great from India, where it has been encouraged by the princes, but discouraged by the British as idolatrous. The great mortality due to want and disease compelled the government to intervene with strict sanitary regulations, and it is now stated that the number of deaths has diminished, and the number of pilgrims increased. The contract with Messrs. Cook and sons in 1886 to convey pilgrims from Bombay to Mecca is said to be a failure financially, reported, Jan. 1895. See *Cholera*. Pilgrimages to shrines of the Virgin Mary in France revived in 1873, and since, in consequence of miracles alleged to have taken place at La Salette in 1846 and at Lourdes, 11 Feb. 1858; those of La Salette discredited by Pope Leo X., 1879. PILGRIM FATHERS, the name given in North America to a party of 74 English puritans and 28 women, members of John Robinson's church, who sailed in the *May Flower* from Leyden to North America, and landed on Plymouth Rock, where they founded a colony, 25 Dec. 1620.

The rev. A. E. Dunning, D.D., of Boston, U.S., with 46 American congregational ministers and others, following the track of the pilgrim fathers, arrive at Plymouth, 11 June; the party were received at Oxford, Bedford and other places; the visitors leave, much gratified, 2 July, 1896.

PILLAR SAINTS, see *Monachism*.

PILLORY, a scaffold for persons to stand on, to render them publicly infamous. This punishment was awarded against persons convicted of forgery, perjury, libelling, &c. In some cases the head was put through a hole, the hands through two others, the nose slit, the face branded with one or more letters, and one or both ears were cut off. There is a statute of the pillory, 41 Hen. III. 1256. Many persons died in the pillory by being struck with stones by the mob, and pelted with rotten eggs and putrid offal. It was abolished as a punishment except for perjury, 1815, and totally abolished in 1837. The last who suffered at the Old Bailey was Peter Jas. Bossy, for perjury, 22 June, 1830.

PILNITZ (near Dresden, Saxony). The convention of Pilnitz took place between the emperor Leopold and the king of Prussia, 20 July, 1791. On 27 Aug. the treaty of Pilnitz, or, as some style it, the Partition treaty, was finally agreed upon at Pavia by the courts in concert. It was to the effect "that the emperor should retake all that Louis XIV. had conquered in the Austrian Netherlands, and uniting these provinces to the Netherlands, give them to his serene highness the elector palatine, to be added to the palatinate; Bavaria to be added to the Austrian possessions," &c.

PILOT. The act relating to pilots, 16 & 17 Vict. c. 129 (1853), with other acts, is embodied in the Merchant Shipping act; 15th annual conference of the United Kingdom Pilots' association at Carnarvon, 12 July, 1898; see *Trinity-House*.

On 20 Dec. 1881, Georgina Moore, 7½ years old, living with her parents in Winchester-street, disappeared; her body was found by bargemen in the Medway, near Yalding, 30 Jan. 1882. Esther Pay, with whom she was last seen, accused of her murder, was acquitted, 29 April, 1882.

Pimlico poisoning case. See *Trials*, April, 1886.

PINCHBECK, an alloy of 25 per cent. of zinc and 75 copper, used for watch-cases, &c.; named after either Christopher or Thomas Pinchbeck, London, mechanics; the former is said to have died in 1732, the latter in 1783.

PINDAREES, bands of freebooters, or mercenary soldiers in the central provinces of India, headquarters Malwa, who, after the fall of the Mogul empire, ravaged the native territories and the British settlements, 1804, *et seq.*, till finally crushed by two armies commanded by the marquis of Hastings in 1817.

PINE-TREES. The stone pine (*Pinus Pinea*), brought to these countries before 1548. The cluster pine (*Pinus Pinaster*), brought from the south of Europe before 1596. The Weymouth pine (*Pinus Strobus*), from North America, 1705. Frankincense pine (*Pinus Tæda*), from North America, before 1713. There are other varieties.

PINKIE (near Edinburgh), where the English under the Earl of Hertford, protector, totally defeated the Scots under the regent Arran, 10 Sept. 1547. There fell not 200 of the English, but above 10,000 of the Scots. Above 1500 were taken prisoners.

PINS have been found in British barrows (*Fosbroke*); and are mentioned in a statute of 1483. Brass pins were brought from France in 1540, and first used in England, it is said, by Catherine Howard, queen of Henry VIII. Pins were made in England in 1543. *Stow.* They were first manufactured by machinery in England in 1824, under a patent of Lemuel Wellman Wright, of the United States.

PIOMBINO, a principality, Italy, previously ruled by the Appiani family, was acquired by the Spaniards, 1589. It was ceded to France, 1801, and given by Napoleon to his sister Elise, wife of prince Bacciochi, who held it from 1805 to 1815, when it was restored to the Buoncampagni family, subject to Tuscany. It became part of the kingdom of Italy, 1860.

PIPE ROLL SOCIETY, founded in 1884 for printing all extant public records prior to the year A.D. 1200.

PIRACY, Greek *pirati*, was severely suppressed by the Romans. Pompey destroyed the Cilician pirates, 67 B.C.; see *Buccaneers*. Many acts of parliament have been passed for the suppression of piracy; the latest in 1837.

PIRÆUS, the port of Athens, was united to the city by two long walls, one erected by Themistocles, and the other by Pericles, 456 B.C., which were destroyed by Lysander, 404 B.C. It was fortified by Conon, 393 B.C. The Piræus was able to contain 400 Greek vessels. It was occupied by the French during the Russian war in 1854.

PIRMASENS (Bavaria). Here Moreau and the French were defeated by the duke of Brunswick and the Prussians, 14 Sept. 1793.

PISA, an ancient city in Tuscany, was founded about six centuries before Christ, and was favoured by the early Roman emperors as a flourishing republic. The citizens took an active part in the Italian wars of the middle ages, but became subject to Florence, after a long siege, 1405-6. In 1494 Pisa became independent under the protection of Charles VIII. of France, but was retaken by the Florentines in 1509. The university was founded in 1343, and revived by the Medici in 1472 and 1542. The rival popes, Benedict XIII. and Gregory XII., were deposed at a council held at Pisa in 1409, and Alexander V. elected in their room. The Campanile or leaning tower was built about 1154,* and the Campo Santo about the same time. Fire panic in the cathedral, 9 persons crushed to death, 21 injured, 29 May, 1897.

PISCICULTURE, see *Fisheries*.

PISTOLS, the smallest fire-arms, said to have been invented at Pistoia in Italy; were first used by the cavalry of England about 1544. Of late years they have been made with a revolving cylindrical breech, in which are formed several chambers for receiving cartridges, and bringing them in succession into a line with the barrel ready for firing. The earliest model of this kind of arm is to be found in the museum of the United Service Institution, and is supposed to date from the reign of Charles I. An eight-chambered matchlock revolver of the 16th century is placed in the Royal Artillery Museum, Woolwich. The manufacture of pistols by machinery was first introduced into England from the United States, America, in the year 1853, by col. Colt, who invented the Colt revolving pistol, 1851. This system of manufacture induced the British government to establish the Enfield armoury, in 1855; see *Fire-Arms*.

PITCAIRN'S ISLAND, in the Pacific Ocean, said to have been discovered by Pitcairn in 1768, seen by Cook in 1773, and since colonised by ten mutineers from the ship *Bounty*, captain Bligh, in 1789; see *Bounty*.

The mutineers remained unknown to England until discovered accidentally in 1814. A ship nearing the island was hailed by a swarthy youth in the English language, when it appeared that the mutineers, soon after settling there, had married some black women from a neighbouring island, and had become a well-conducted community under the care of Adams, the principal mutineer. He died in 1829, when George Hunn Nobbs, an Englishman, who arrived a few years before, became chief. In Aug. 1852 admiral Moresby spent a few days on the island. By his means Nobbs was sent to England and obtained ordination. His death (aged 86) announced Jan. 1885. As their numbers increased, the island proved incapable of their support. The English government removed them, with all their property, in the ship *Morayshire*, on 3 May, 1856, and landed them, after a boisterous passage, on Norfolk Island, prepared previously for their reception, 8 June. The government stocked Norfolk Island with 2000 sheep, 450 head of cattle, and twenty horses, and gave them stores to last twelve months; their numbers were 96 males and 102 females.

The island visited by H.M.S. *Peterel* was found to be prosperous, Dec. 1875. Population, 15 Aug. 1879, 93; in 1890, 126.

PITT ADMINISTRATIONS.* The first administration was formed on the dismissal of the Portland ministry 18 Dec. 1783, and terminated by resignation in 1801. The second was formed 12 May, 1804; and terminated (after various changes) by Mr. Pitt's death, 23 Jan. 1806. A public funeral was decreed to him, and 40,000*l.* to pay his debts.

* The Campanile was erected to contain bells, and stands in a square close to the cathedral. It is built entirely of white marble, and is a cylinder of eight stories, each adorned with a round of columns, rising one above another. It inclines so far on one side from the perpendicular, that in dropping a plummet from the top, which is 188 feet in height, it falls sixteen feet from the base. Some thought this was done purposely by the architect; others attributed it to an accidental subsidence of the foundation. From this tower Galileo made his observation on gravitation (about 1635).

* William Pitt, second son of the great earl of Chatham, was born 28 March, 1759; became M.P. 23 Jan. 1782; moved for a reform in parliament, 7 May, 1782; became chancellor of the exchequer, July, 1782; died 23 Jan. 1806.

PITTSBURG LANDING (near Corinth, Tennessee). On Sunday, 6 April, 1862, a great battle was fought between the American federals under Grant and Prentiss, and the confederates under Albert Sydney Johnston and Beauregard. The latter began the attack and were victorious, but lost their able general Johnston. The federals were reinforced the next day and renewed the attack; the confederates maintained their ground; but soon after retired in good order to Corinth. This engagement is also named the battle of Shiloh.

PLACENTIA (now Piacenza), N. Italy, founded by the Romans about 220 B.C. It suffered in all the convulsions attending the fall of the empire, and the wars of the middle ages. In 1254 it fell under the rule of the family of the Scotti. In 1302 Alberto Scotto was overcome, and Placentia was united to Milan, then ruled by the Visconti. On their extinction in 1447, Placentia revolted, but was taken by Sforza duke of Milan, and treated very cruelly. In 1513 it was given to pope Leo X. In 1545, Paul III. gave it with Parma as a duchy to his son Peter Louis Farnese. The French and Spaniards were defeated by the Austrians and Sardinians near Placentia, 16 June, 1746; see *Parma.*

PLANETS.

Jupiter was known as a planet to the Chinese and the Chaldeans, and inserted in a chart of the heavens, made about 600 B.C., and in which 1460 stars are accurately described; this chart is said to be in the national library at Paris. The four satellites of Jupiter discovered by Galileo, 7 Jan. 1601, see *Mars, Saturn.* We now know eight primary planets, termed major; *Mercury, Venus,* the *Earth, Mars, Jupiter, Saturn, Uranus, Neptune;* and, secondary or minor, situated between the orbits of Mars and Jupiter. The numerical order differs in the lists of English, German, and French astronomers. In the French and German lists, *Aglaia* to *Pandora* are numbered 47 to 55; *Meletè* is 56.

Uranus, formerly called *Georgium Sidus* and *Herschel;* discovered by W. Herschel (see *Georgium Sidus*) . . . . . 13 March, 1781
Neptune, discovered by Galle (in consequence of the calculations of Le Verrier) (see *Neptune*) 23 Sept. 1846. It had been theoretically discovered by professor J. Couch Adams of Cambridge . . . 1845
Vulcan (between Mercury and the Sun), said to be discovered by M. Lescarbault, a physician (not seen since), 26 March, 1859, and its discovery is now generally doubted; said to have been seen by Watson during the solar eclipse (doubted by Peters) . . . . . 29, 30 July, 1878
